

KMD EnergyKey

The best data basis for billing, customer service and energy consultancy

”

With our new strategy, we can use the measurement data for operation optimization and better energy consulting. And then it gives us the opportunity to make new services available to our customers.

The best data basis for billing, customer service and energy consultancy

- _ An overview of the total energy consumption: Who is the user? And how much energy is used for what and when?
- _ An analysis tool that reveals which activities and investments give the biggest energy savings
- _ Nudging: Info screens and web solutions, which provide information about the company's energy consumption, etc

What is KMD EnergyKey?

KMD EnergyKey is an IT solution that gathers and quality assures the utility company's energy data to use for billing, operation optimization and energy consulting.

Among other things, KMD EnergyKey calculates energy consumption, historical data and budget variations. Furthermore, it presents the results in an easily understandable context as required by the user.

KMD EnergyKey includes a user-friendly visualization solution with associated services, notification, etc. which can be embedded in the utility company's own self-service universe or be used as an independent web portal for customer service and energy consultancy. KMD EnergyKey is available as SaaS on Microsoft Azure.

This is why customers choose KMD EnergyKey

- _ KMD EnergyKey can accumulate data from all essential loggers and remote reading systems and ensure independency from meter suppliers.
- _ KMD EnergyKey increases the value of remote reading projects and enhances the overview of data quality and security of data supply from configuration to dismounting.
- _ KMD EnergyKey enables proactive customer service and energy consulting which strengthen customer satisfaction and the focus on sustainability.
