

BCN Foundation

BCN Foundation is the culmination of over 20 years of consulting and application development within Microsoft Dynamics 365 Business Central.

Designed for use by everyone, it brings together all the small tweaks, changes, and product enhancements we have encountered during project implementation – all in one application.

What are the benefits?

The benefits below represent just a snippet of the features bundled with the BCN Foundation application.

Assign your account managers

Sometimes it's not enough to log just the salesperson or purchaser against your customer and vendor accounts. BCN Foundation provides an account manager facility so you can assign the person with overall responsibility for your accounts.

Integrated PDF viewer

When you want to view that document a local copy will usually be downloaded, creating multiple copies of the same file in your system. The integrated PDF viewer in BCN Foundation means PDFs don't need to be downloaded to see them.

Configure and edit fields

Don't like the terminology of some of the fields? This feature allows the most common fields in Dynamics 365 Business Central to have their display caption read anything you like. It can be easily extended to cover other fields too.

Configurable alerts

Create alerts that can be shown during the entry of sales or purchase documents, such as important information. Alerts can be non-intrusive notifications at the top of the screen, or larger HTML based pages

Create barcodes quickly and easily

This feature allows Business Central to automatically generate EAN13 barcode numbers for new items based on your company GS1 prefix.

User activities feature

Our user activities feature adds to the standard Business Central permissions to further control what users can do, eg; changing customer details or credit limit. It's easily extendible too, so you can add any additional checks, quickly and simply.

Enhanced drag and drop feature

Simply drop critical documents and e-mails into the document attachments factbox that is shown on list and card pages. We've added the document attachments to some extra Business Central places too!

Extended item descriptions

BCN Foundation includes an embedded HTML editor to create extended item descriptions that can then be exported to websites or sales portals.
