

evo-supply

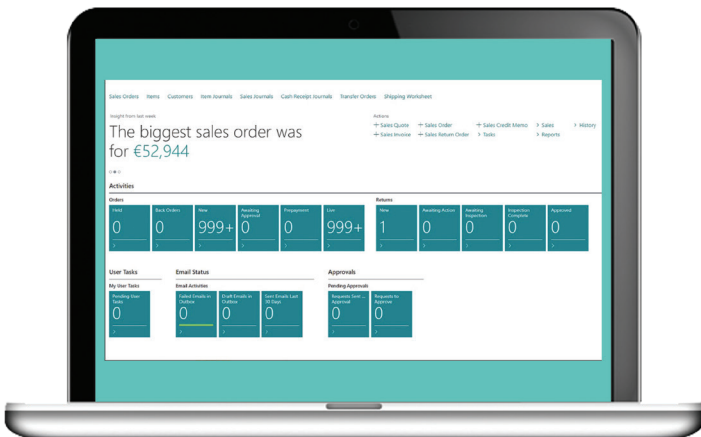

Integrated software solution for the supply chain sector

Evo-supply is an evolutionary, and feature-rich business solution for importation, distribution and manufacturing industries, designed to help streamline supply chain business processes.

Powered by Microsoft Dynamics 365 Business Central, it is delivered as a suite of modular applications.

Evo-supply is the starting point for operating as few or as many application features as you need.

Additional applications can be purchased and installed as required - as your business grows, it can grow too.

* Some Integrations subject to your Microsoft Dynamic 365 Business Central Platform.

Features include:

- Pallet and carton content tracking
- Warehouse book-ins
- Shipping pro-forma invoices
- Advanced shipping control
- Product assortments
- Duty rate management
- Factory management
- Automated system alerts
- Enhanced purchase and sales document statuses
- Connect your sales partners using Data-Bridge*
- Sales margin tracking and approval
- Container and vessel tracking
- Dynamic Picking algorithms
- Enhanced warehousing
- Pick fail register

An end-to-end business management application that scales with your business

Evo-supply

Designed as a starting point for all businesses, evo-supply meets most needs without complex configuration or modification.

Once added to your Dynamics 365 Business Central, Enterprise applications can be added to activate more features.

Enterprise

Enterprise extends evo-supply to include a range of additional applications which can be leveraged as and when needed.

Simply choose the additional applications you would like to use, and we'll add them into your evo-supply environment.

Bespoke

For more complex requirements, our consultants and developers are available to help develop your solution.

We're constantly meeting with customers and industry experts to introduce new products, features and technology.

Evo-supply features

Evo-supply is our out-of-the-box software solution which provides features and software development kits for simple and efficient customisation. The features below come with evo-supply as standard.

Inventory

Enables easy identification of item assortments, better tracking and viewing of items, giving the visibility needed to confidently account for items.

Warehousing

Warehousing features offer enhanced bin blocking, shipping configurations, and intuitive management of delivery bookings with customers.

Transit Management

Manage transit processes with full container tracking, including incoterms, source and destination, seal numbers, and contents of containers.

Purchasing

Makes the purchasing process simple and manageable with duty rate management by country, duplicate items warnings, factory tracking and automated alerts.

Data-Bridge

Offers core functionality for importing, exporting and processing data for elements with an extensive list of partner connectors, e.g sales orders, import and sales invoice export.

Sales

Enhance sales approval processes with margin checking, document status tracking and hierarchical customer pricing as standard with evo-supply.

Dynamic Picking

Determine how a pick should be performed by picking templates to assign to customers, orders and warehouses, with the flexibility to change templates to suit day-to-day operations.

Advanced Shipping

Provides a full overview of orders on the system and what can and can't be fulfilled. Select orders to send manually or use templates from Dynamics 365 Business Central.

The benefits

Enhanced Microsoft Dynamics 365 Business Central functionality

- Bulk actioning of all your sales and purchase documents.
- Document control totals.
- User activities working along-side standard Dynamics 365 Business Central permissions, e.g User can modify a customer, but cannot change credit limit field.

evo-supply

Inventory

- Assortment types.
- Inventory status codes.
- Enhanced inventory availability: physical inventory, usable, available, free and forward free.

Warehousing

- Enhanced bin blocking with reason code.
- Shipping configurations; pallets, cartons, contents.
- Enhanced consolidated shipping.
- Manage delivery bookings with customers.
- Advanced proforma invoicing and deposit tracking based off shipment values rather than order values.
- Enhanced warehousing workflows.
- Fulfilment Status shows the status of inventory on records where an item is number present.

Purchasing

- Duty rate management by country.
- Configurable duplicate item warnings by document [integrated to user My Notifications].
- Purchase document statuses.
- Factory tracking.
- Automated alerts [plain text or HTML].

Transit Management

- Full container tracking; incoterms, source, destination countries/ports, seal numbers, contents.
- Attach relevant importation documentation to orders.
- Full date tracking and arrival estimation.
- Full drop shipment management for users that sell direct containers to their customers.
- Real-time vessel tracking with our online map.

Data-Bridge

- Send and receive sales orders to partners, inventory information to 3rd party warehouses, purchasing data to suppliers, and export sales data to sales portals such as Pixsell and mSeller.
- Simply plug in and play through one of our range of unique connectors.
- Can be fully automated to ensure receipt of orders throughout the day for processing before the designated cut off point.
- Our seamless integrations enable Data-Bridge to process transactions without any interactions from users; import, validate, process order data and automatically send orders to pick

Sales

- Enhanced sales approval processes, with margin checking by line or document and approval reasons.
- Document status tracking, along with enhanced role centres for visibility.
- Remove items from margin checking during sell-off.
- Hierarchical customer pricing to over-ride the standard behaviour of pricing.

Advanced Shipping

- Shipping worksheet gives a full overview of orders you have on system and what can be fulfilled.
- Select orders to send manually, or use suggestion templates. Templates provided as standard are by margin, order date, and shipment date.
- Automatically consolidate multiple orders to the same delivery address onto a single warehouse shipment to optimise your deliveries.
- "Mop Up" back orders to allow previously unshipped orders to be added to new shipments for a customer.
- Fully automated mode allows inventory allocation and warehouse shipment creation through job queues.

Dynamic Picking

- Pick templates can be assigned to customers, orders and warehouse to determine how it should be performed.
- Pick by highest/lowest bin ranking, highest/lowest quantity in bin, oldest/newest stock.
- Change default template during day-to-day operations to allow processes such as Pick for Speed or Pick for Space.
- Full pick fail register to allow monitoring of picks that were unable to be completed.

Evo-supply Enterprise additional features

Our evo-supply Enterprise suite of applications is built on evo-supply. Evo-supply Enterprise enables you to introduce additional extension applications that leverage existing evo-supply data for enhanced functionality. Some of the many applications are featured below.

Item Analysis Codes

The evo-supply Enterprise application that enables enhanced, hierarchical fully configurable reporting based around your item data.

Additional Data-Bridge Partners

Pre-built connectors automate transactions between Dynamics 365 Business Central and your business partners, adding to basic capabilities.

Quantity Roundings

Make sure the orders you enter are always in the appropriate units by automatically adjusting the quantities you enter.

Partner Portal

A self-service Business Central portal for selected partners - suppliers can update shipments, customers can view statements, invoices and payments.

Packing Bench

Improve order fulfilment accuracy by checking picks before they are packed and shipped. Streamline direct shipping packing through automated labelling.

Commission Reporting

Simple reporting for your sales team to allow you to better calculate commission due.
