

E-Business ERP AI

PINTOR PROJECT

We empower our clients with integrated and customizable solutions that give them a competitive advantage in the market

Our development team can take your requirements, design the solution and implement it with the leading industry technologies and standards. We have Microsoft-certified team members that can handle any IT project.

Today, we are especially focused on the digitization of business processes and Business Intelligence (BI), recently incorporating artificial intelligence (AI) into the systems.

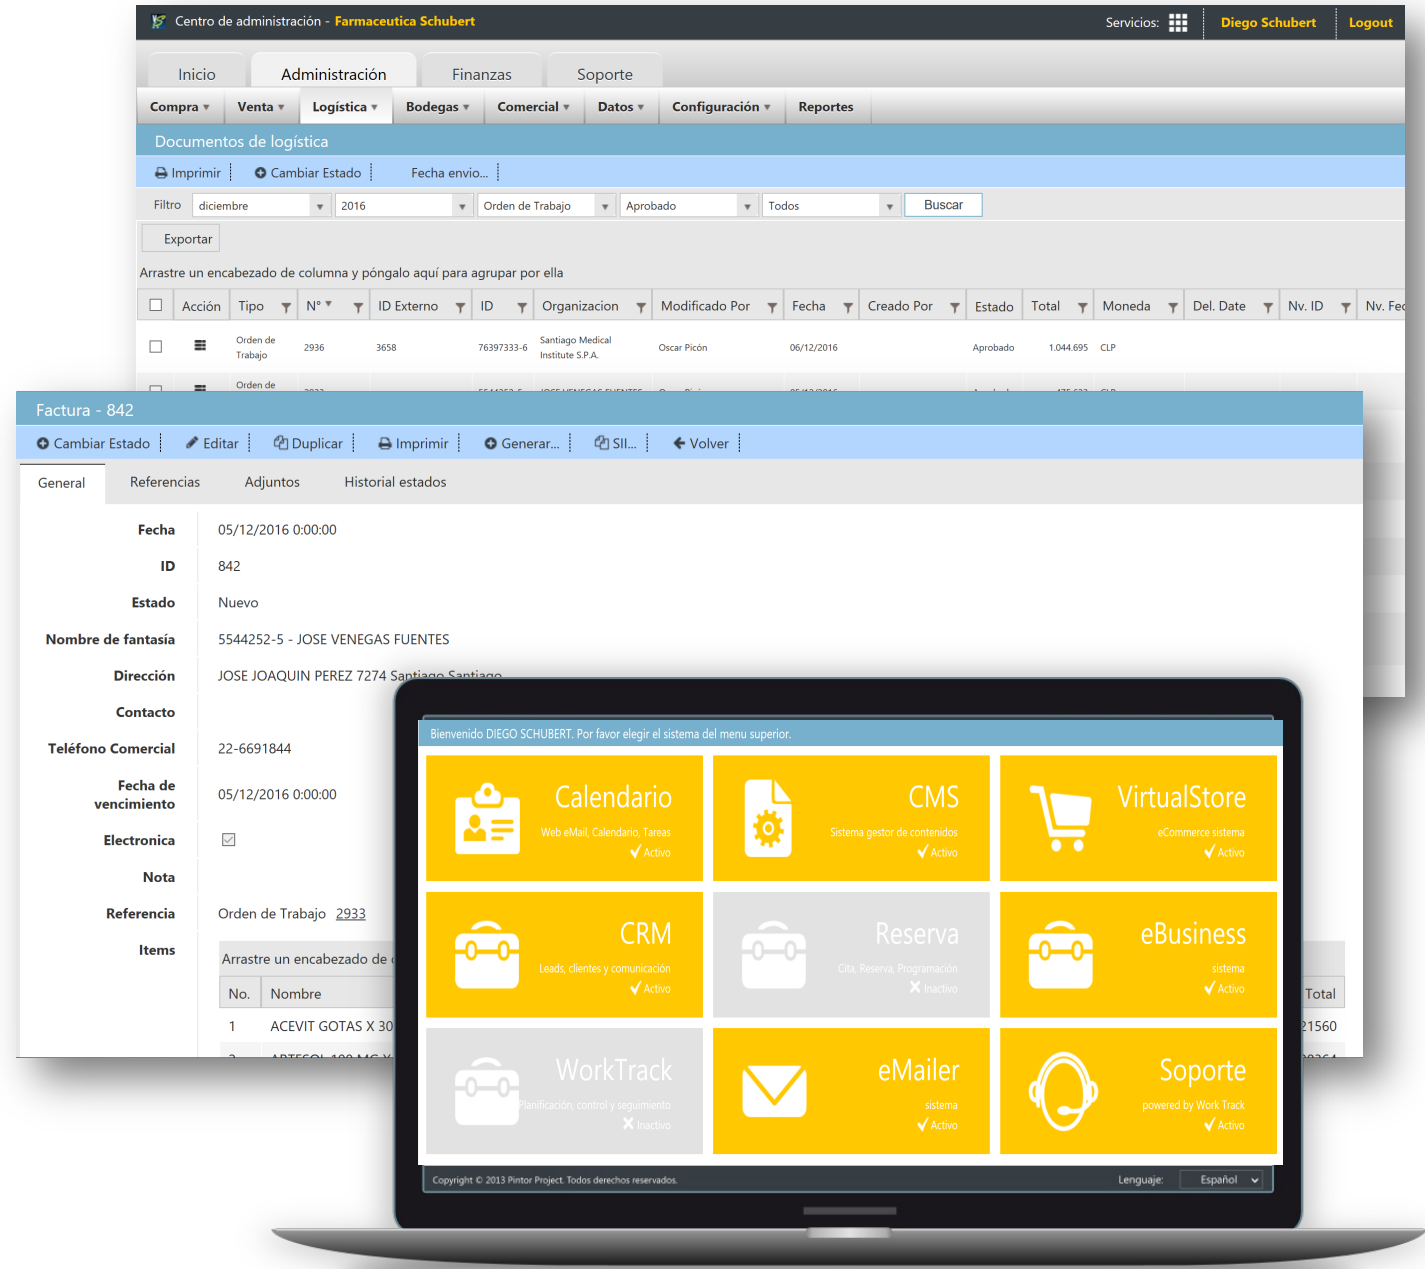

Through participation in a variety of projects, we have acquired extensive experience in the design and development of computer systems. Our knowledge has been confirmed and enhanced over time.

E-Business

The company management system allows for the entry, maintenance, and tracking of products, manufacturers, price lists, discounts, purchasing processes, sales, warehouse management (WMS), logistics, customer and supplier accounts, electronic billing, electronic accounting books, collections, and others. It enables the integration of additional processes such as recipes and others.

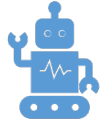

The system is flexible and allows for the configuration of different complex document flows and statuses. Our motive is the automation of client processes, achieving greater speed in management with optimal control.

Introducing ERP AI

Revolutionizing Business Operations with AI & Omnichannel Support

ERP_{AI}

1. AI-Enhanced Efficiency: Automate and streamline tedious, repetitive tasks across Purchases, Sales, Warehouse Management, and more, allowing your team to focus on strategic initiatives.

2. Omnichannel B2B Engagement: Utilize advanced AI to seamlessly integrate all client communication channels, enabling real-time responses, automated service tickets, and consistent client experiences without the complexity.

3. Customizable and Scalable: Tailor ERP AI to fit your unique business needs without significant additional investments in infrastructure or training.

4. Advanced Analytics & Insights: Utilize AI-driven analytics for predictive insights, performance monitoring, and data-driven decisions with integrated Power BI and KPI tracking.

5. Enhanced Security & Accessibility: Ensure data integrity and secure access with advanced protocols, enabling efficient operations and peace of mind.

Key Benefits

Operational Excellence: Do more with less by enhancing core operations and automating workflow for unprecedented efficiency.

Data-Driven Decision Making: Harness the power of AI for real-time analytics, sales forecasts, and operational insights.

Unified Customer Experience: Offer seamless interactions across all customer touchpoints, increasing engagement and satisfaction.

Future-Proof Your Business: Stay ahead of the curve with a scalable solution that grows with you, adapting to future demands and technological advancements.
