How to Change Behavior with RealTime Security Awareness Training

“ Security awareness is more than phishing simulation and computer-based training. Leading programs leverage vendor platforms that enable and augment the execution of a multichannel, context-specific and employee-centric approach to educate employees and change behaviors. ”

Gartner Market Guide, 2021

ACHIEVE MORE WITH LESS

SafeTitan has combined the latest security training techniques with real-time data analytics to mitigate human error to help you deliver your security training where and when it's needed most. Automatically send training content, policy reminders, data regulations and compliance standards to staff at the exact moment they display risky cyber behaviors.

KEY FEATURES:

- Train employees in their exact moment of need - when they take a risk and don't even realise it.
- Automatically send training content, policy reminders, data regulations and compliance standards to staff when they engage in risky cyber behaviours.
- Send relevant snippet from a company policy documents tied to the specific user activity.
- Maximize ROI on your technical defences.
- Reduce admin overhead by delivering repeatable and consistent training content.

BEHAVIOUR DATABASE

We map real-time user events to our behaviour database giving you full visibility into your company's human cyber risks, vulnerabilities and probabilities with our unique risk scoring capability.

SEE REPORTING ON

- Human Cyber Risk Analysis
- Behaviour Vulnerability Analysis
