Microsoft Marketplace Consultation Service

About Us

Cyber & Identity, Imagineers & Engineers

We are a modern Cyber Security services organisation, specialising in Identity and Access Management, Cloud Engineering, and Cloud Infrastructure. We work hand-in-hand with our clients, fostering strong partnerships to drive impactful, innovative, and committed solutions.

At Modern Methodologies, we are passionate about helping organisations enhance their cyber practices and successfully transition into digital-first businesses. Our team of experts brings specialised skills and expertise to deliver quality outcomes and value. We take pride in leaving organisations better than we found them by improving efficiency, enhancing security, and transferring knowledge and skills.

Through our collaborative approach, we prioritise building lasting relationships with our clients. We believe that by working together, we can create transformative solutions that truly meet their unique needs. Our dedication to delivering exceptional results and adding value is the driving force behind everything we do.

Our Services

We offer a range of strategic and technical services tailored to each organisations needs for achieving their Cyber Security dreams, from assessment services to strategic planning and implementing technical solutions & controls.

Assessment Methodology

With the evergreen nature of SaaS/Microsoft 365 products, we are seeing organisation's organically using new features and capabilities of products and/or platforms. Regular reviews of these platforms are required to ensure there is coverage and oversight over the security of the entire platform and the newly introduced services.

Our assessments and platform reviews align to industry security best practices and frameworks, tailored to your organisation's requirements. We align our approach with respected frameworks such as the Australian Government Cyber Framework and NIST.

Our team comprises skilled and certified experts who have experience working in protected environments within the Federal Government and large secure enterprises. We understand the unique complexities and intricacies that each organisation faces within its environment, allowing us to provide tailored insights and recommendations to address your needs.

CA Policy Assessment Approach

Business Requirements & Policy Intent

Review current documentation and work with internal SME's to understand the policy intent and business requirements

Discover & Analysis Workshop

Undertake detailed discovery and analysis using various techniques such as automated scripts, scenario testing, and spot review (requires access to platform).

Engage Business with Findings

Produce a detailed report covering off the various Conditional Access Policy implementation areas to include findings and recommendations.

Workshop & Sign-off

Workshop findings and recommendations with key stakeholders to ensure there's a shared understanding of risks and issues and offer forward guidance
