

# iTwin Platform Overview

**Bentley**<sup>®</sup>

# Why Digital Twins?

Digital twins enable you to visualize the asset, track change, and perform analysis to better understand and optimize asset performance.

Digital twins are continuously updated with data from the physical asset. This data is used to understand and model the asset's performance.

# Digital Twin Solutions

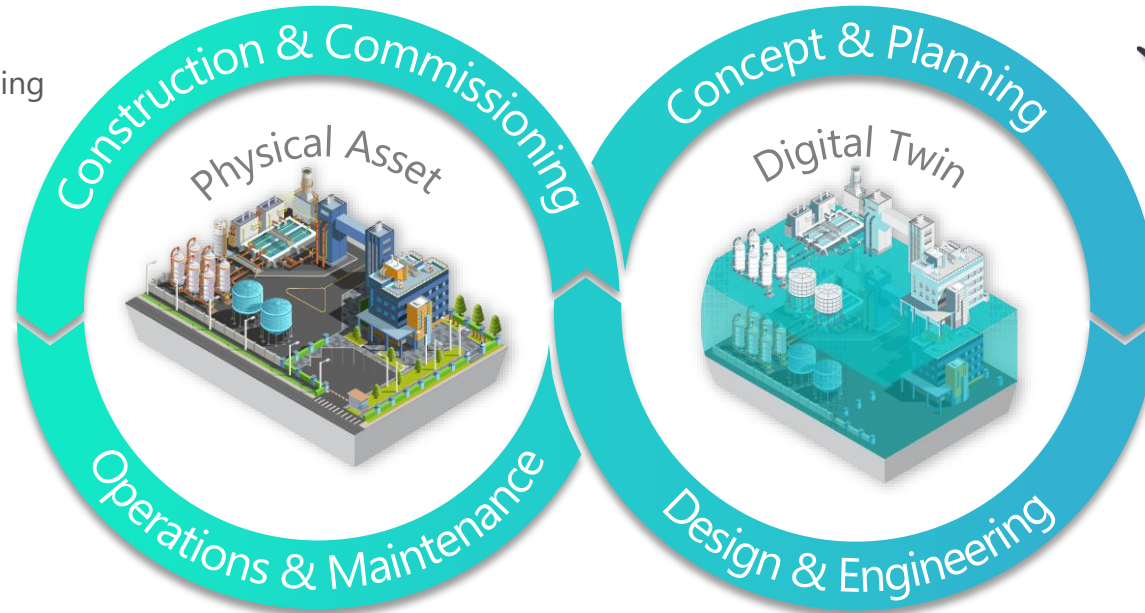

Digital twins enable you to visualize the asset, track change, and perform analysis to better understand and optimize asset performance throughout the entire asset lifecycle.

- 4D construction modeling
- Simulate logistics
- Track progress / status

- HSSE training
- Operator training
- Remote inspection
- Leak detection
- Corrosion detection
- Maintenance planning
- Shutdowns
- Verify before execution

- Site survey
- Reality capture

- Stakeholder engagement
- Planning and visualization
- Design collaboration

Forecast **26.4% Compound Annual Growth** in the use of Digital Twins for the Built Environment and Construction through 2026 - *Frost & Sullivan*

iTwin platform provides the foundation for creating infrastructure digital twin solutions enabling Bentley, engineering firms, strategic partners, integrators and independent software vendors to bring digital twin solutions to market.

The platform takes care of back-end concerns such as security, infrastructure, and data integration so that developers can focus on bringing solutions with digital twin business value and workflows to market faster.

### iTwin Platform APIs

---

Services for building iTwin  
Powered apps targeting  
Infrastructure Digital Twins  
workflows

### iTwin.js

---

Open-source libraries to  
create and visualize  
Infrastructure Digital Twins

### iTwin Extensions

---

Pre-packaged libraries to  
expand the capabilities of  
iTwin Powered  
Applications

**Disparate Data**

**Engineering Data**

2D, 3D & 4D Design Models, Drawings, Analysis, Specs

**Reality Data**

Photos, Videos, Points Clouds

**Sensor Data**

IOT, IIOT, Other Time Series

**Enterprise Data**

APM, ERP, EAM, ALIM

**Geospatial Data**

GIS, Maps, Terrains, TINs

**Geotechnical Data**

Soil boring logs, Foundations, Compliance

**Schedule Data**

4D Schedule integrated with models

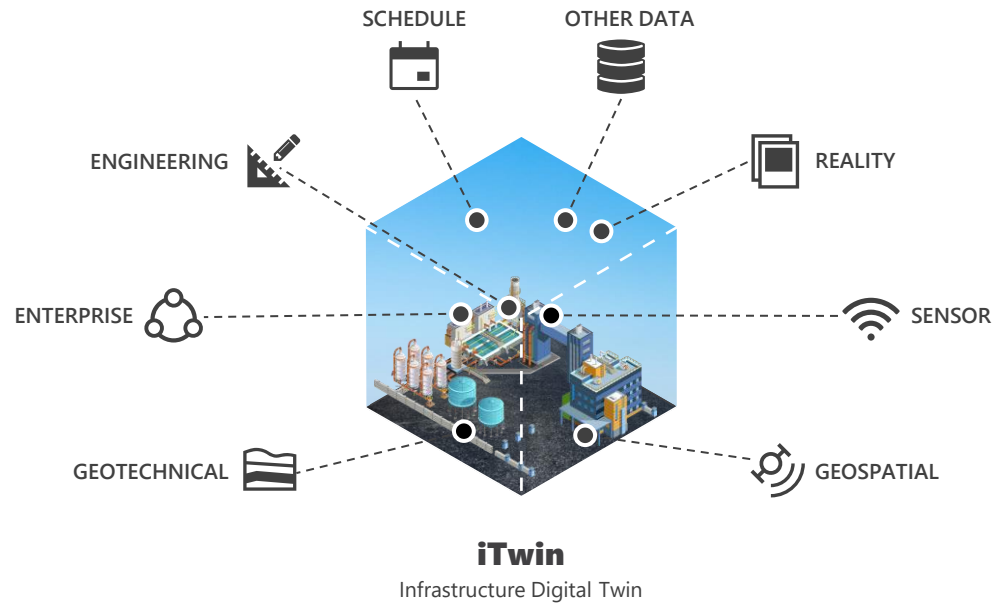

**Other Data**

Open & extensible  
For integration with Data sources

**iTwin Platform**

PaaS Services and Open-Source Software Components

**You Develop**

**YOUR OWN APPLICATIONS**

Powered by iTwin

-  Web, Desktop & Mobile Apps
-  Unreal Apps
-  Unity Apps
-  Application Extensions
-  Automated Workflows Agents

**EXTEND BENTLEY APPLICATIONS\***

You leverage the same platform that Bentley uses for its own Powered by iTwin applications.

Your extensions can run in these apps, and others' extensions can run in your apps.

-  PlantSight
-  Synchro
-  Design Review
-  OpenCities

*\*Support for extensions coming soon*

> Permissions

> Thumbnails

> Users

> iModels

[Release notes](#)

### Administration

Manage the users, projects, and your iTwin. [Learn more...](#)

### Projects

Manage projects associated with your iTwin.

### Reality Capture

Convert photos into high resolution orthophotos. [Learn more...](#)

### ContextCapture

## REST API Overview

### Tutorials

**5 min**

**Create an empty iModel**  
Walk-through how to create an empty iModel which later can be used for synchronization.

**10 min**

**Create iModel Named Version**  
Walk-through how to create a new Named Version within existing iModel.

**20 min**

**Synchronize a file from iTwin Storage**  
Walk-through how to synchronize a file from iTwin Storage to an iModel using Synchronization API.

**20 min**

**Export data from an iModel**  
This tutorial guides you through exporting data from an iModel to other formats, such as IFC or...

**What are  
developers  
building with the  
iTwin Platform?**

# What are developers building with iTwin Platform?

## Connectors

Align data and detect changes

## Agent

Subscribed to iModelHub events

## Front-End Extension

## Interactive Web Frontend

## Interactive Web Backend

## Native Application (Frontend + Backend) Desktop/Mobile

## Integrations with Game Engines

## P&ID Validation

## Mobile Inspection

## Smart Building

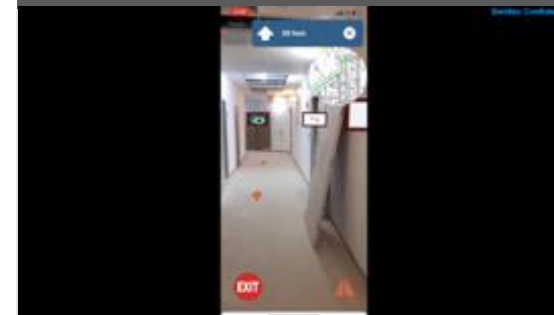

## Thermal Efficiency

## Element Association

## Indoor Navigation

## Traffic Reporting

## Leak Reporting

## Climate Simulation
