Silver Collaboration and Content
Silver Project and Portfolio Management

To succeed in healthcare today, organisations require smarter technology

Health and community care providers are expected to continuously improve client outcomes and ensure compliance while maintaining cost-effective operations.

CHALLENGES

Many care providers lack a fully integrated, easy-to-use care management software platform, so time and effort that could be focused on their clients is instead spent on repetitive administrative tasks.

IDEAL SOLUTION

Care providers seek a state-of-the-art platform fully equipped to assist them in delivering coordinated care, optimizing workforce efficiency, and improving client engagement, all in one central workspace.

DESIRED OUTCOMES

Such a platform would improve quality, safety, and efficiency of health and community care service delivery.

DC2Vue®
EMPOWERING CARE TEAMS

6 fit-for-purpose solution templates to organise your care team.

DC2Vue® automates workflows and communications to integrate interactions, intake and assessment, care planning, roster and scheduling, service delivery, billing, and reporting.

1 **Hospitals and post acute care**
Establish and maintain effective clinical and administrative workflows through statutory reporting.

2 **Allied and community health**
Data-driven solution for continuity and coordination of care.

3 **Home care and disability care**
Organise your team 10x better with smart scheduling and rostering.

DC2Vue® + Microsoft Azure

DC2Vue® provides a versatile, modern, open architecture designed to take advantage of Microsoft Azure AI and analytics. We equip customers with a fast, flexible platform that's responsive to changing business dynamics and reduces the need for upfront investment in IT infrastructure.

### Standards-based interoperability

Enable tool integration via standards such as HL7 and FHIR, and provide secure messaging in workflows and communication.

Security and compliance

Leverage turnkey deployment of multisite solutions at scale for your health data, while meeting industry requirements.

Predictive analytics

Harness your data to drive decisions via operational analysis, and use built-in AI capabilities for predictive planning.

Customer success: Empowering community mental health teams

"DC2Vue® provides a complete and integrated triage, community, and residential mental health digital solution for Bendigo Health across the Loddon Mallee region. DC2Vue® helps clinicians achieve their objectives by being able to go to one point for all their clinical information." — Bendigo Health

Real-time access to information
Staff members across the region maintain real-time access to all relevant clinical documentation, enhancing clinical decision-making.

Timely care coordination
Dashboards manage critical workflows, allowing work to be communicated, prioritized, and acted on in real time across all teams.

Management of critical workflows
The platform supports and protects patients' rights in decision-making and treatment-planning according to their needs in a digital environment.
