EVIDEN

Eviden Confidential Data Room

In today's market, strict data privacy regulations create challenges for companies that want to collaboratively share data in a safe environment where data is encrypted. These challenges limit the valuable insights and relationships that lead to business opportunities.

Eviden's innovative technology helps you collaborate in a secure and compliant environment across industries.

What we offer

Imagining a world where you can collaborate with protected, encrypted data is a thing of the past. With Eviden Confidential Data Room solutions, you can encrypt data at the source, ensuring data owners maintain control and sovereignty while allowing them to securely share and combine data in a confidential data room. Performing analytics on encrypted data without decrypting it protects raw data, helping owners identify patterns and behavioral changes while complying with data privacy regulations and maintaining data sovereignty.

Eviden Confidential Data Room

Benefit from shared insights and generate additional knowledge through data collaboration while fostering data protection compliance.

Benefits

- Gain performance analytics from protected, encrypted data.
- Produce protective and encrypted collaborative data sets.
- Create protected and encrypted data for machine learning.
- Maintain internal and external compliance with data regulations.
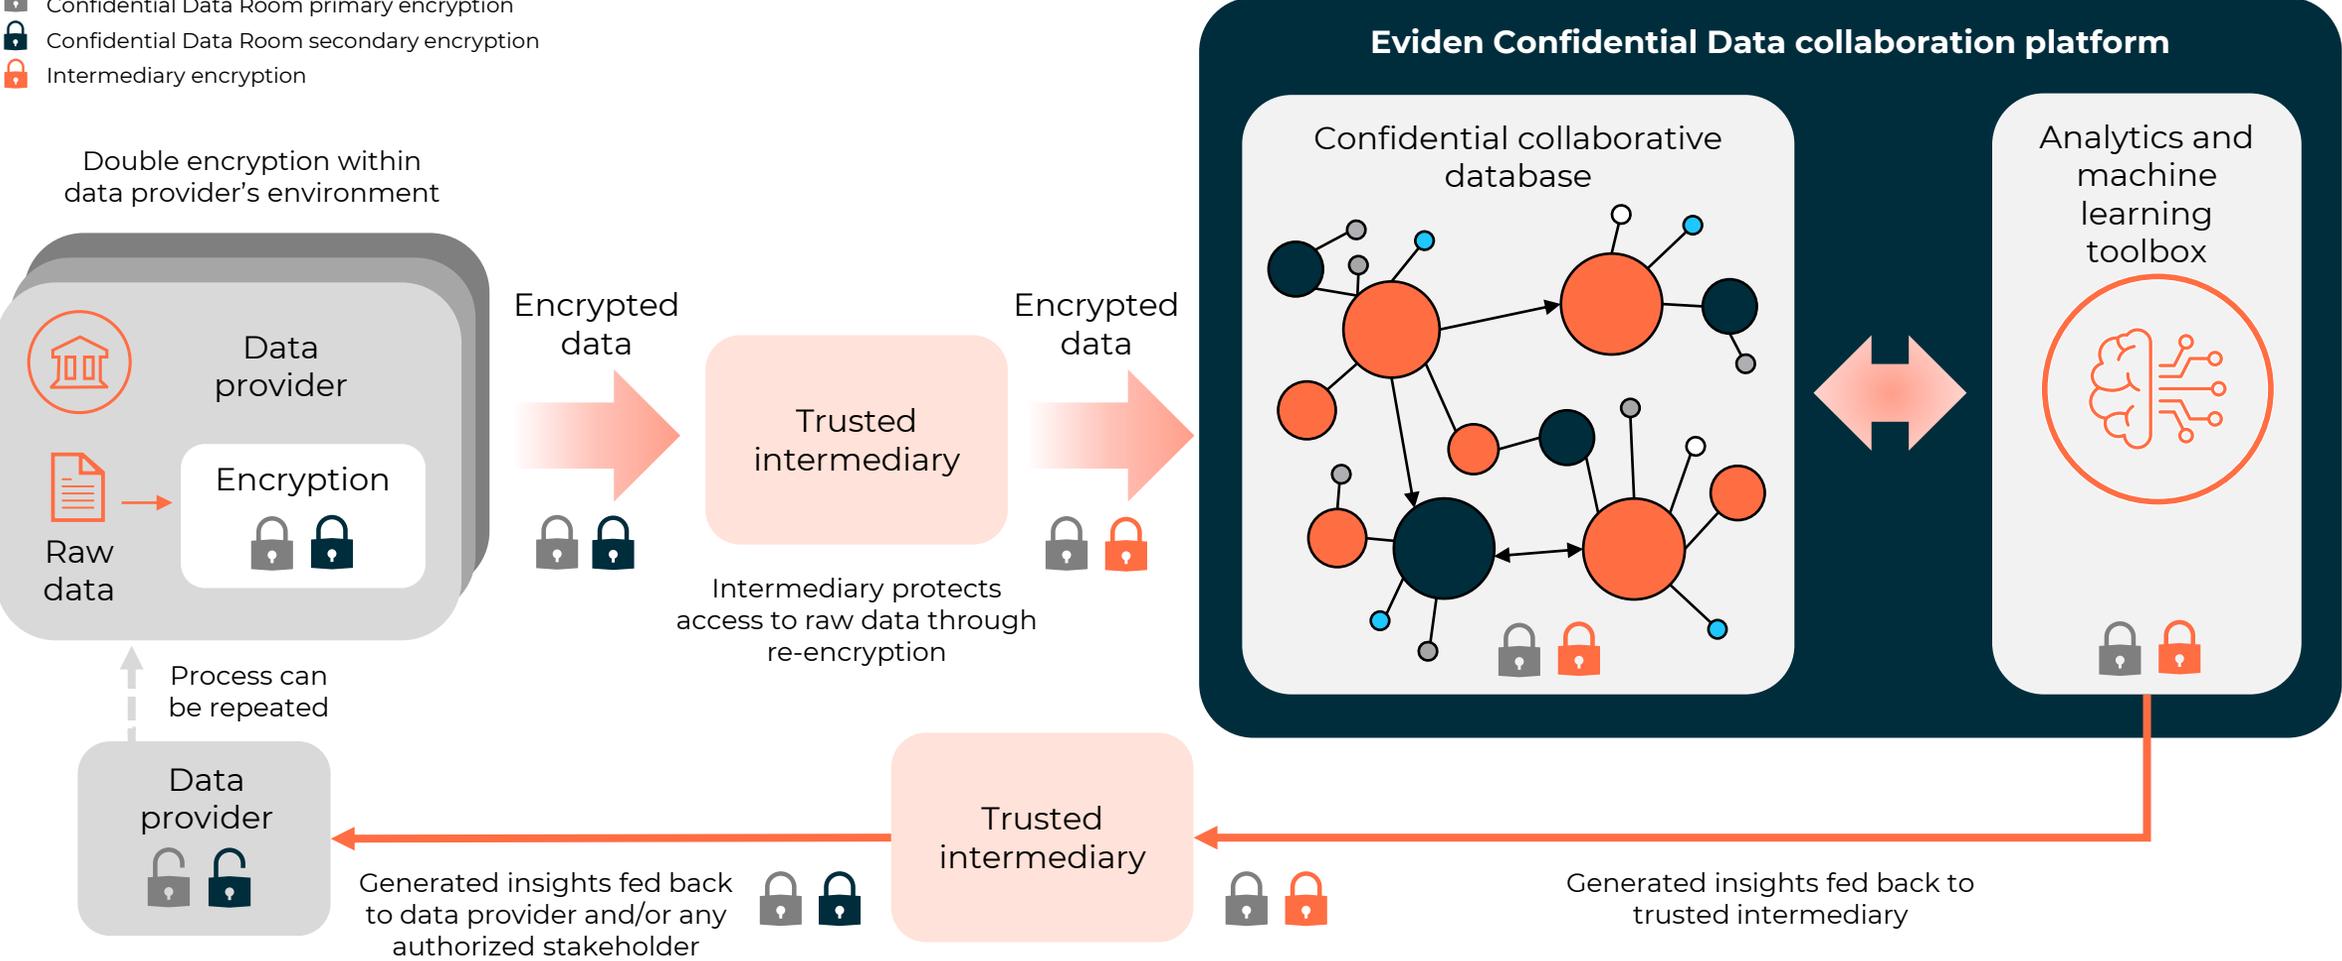

Differentiators

This proprietary solution is a one-of-a-kind offering that allows for the detection of anomalies, patterns, behaviors, and statistics within protected and encrypted data.

Methodology

Eviden Confidential Data Room conceptual workflow

PATENT PENDING

🔒 Confidential Data Room primary encryption
🔒 Confidential Data Room secondary encryption
🔒 Intermediary encryption

Double encryption within data provider's environment

Data provider

Raw data → Encryption 🔒🔒

Process can be repeated

Encrypted data 🔒🔒

Trusted intermediary

Intermediary protects access to raw data through re-encryption

Encrypted data 🔒🔒

Eviden Confidential Data collaboration platform

Confidential collaborative database

🔒🔒

Analytics and machine learning toolbox

🔒🔒

Data provider 🔒🔒

Generated insights fed back to data provider and/or any authorized stakeholder

🔒🔒 Trusted intermediary 🔒🔒

Generated insights fed back to trusted intermediary
