# The Journey to a Modern Enterprise

The Journey to a Modern Enterprise is our proven approach to moving customers to Azure. **Azure Advanced Security** is an offering which is part of this approach, built from many years' experience of moving customers to the cloud.

# What is Azure Advanced Security?

**Azure Advanced Security** from **Servent** helps organisations address the challenges of securing their hybrid infrastructure and data whilst meeting the growing demands of a rapidly changing threat landscape by utilising Azure security capabilities.

Take advantage of the multi-layered security services provided by Microsoft across physical datacentres, infrastructure, and operations in Azure which can also be extended to protect workloads in other cloud platforms all managed in Azure.

We work with you to increase your security posture using the native Azure security capabilities which can provide a range of benefits, including cost savings, consistent security policies, scalability, ease of use, improved threat detection, response, and compliance as well as help you leverage existing investment in 3rd party security tooling.

# Our Approach

Our approach is aligned to the **Microsoft Cybersecurity Reference Architecture**, which provides a comprehensive and holistic framework for managing and improving cybersecurity and a set of best practices for designing, building, and operating secure systems using Microsoft technologies. Our aim is to help you align your cybersecurity efforts with your business goals and regulatory requirements and guide you in the implementation of effective security solutions and processes.

## Assess

We analyse and review your organisation's current security capabilities and posture, license coverage or gaps, and develop a roadmap to deliver solutions in line with your security aspirations.

## Enable

Working with your teams to deploy and configure in a cost-effective manner the Defender services relevant to meet your security requirements, ensuring that all agents/extensions, data connectors, etc., are fully operational.

## Protect

Providing mechanisms to analyse cost, create and manage budgets, and act on best practice recommendations.

# Why **Servent**

An agile partner who can mobilise in days and not months, with the skills and experience to deliver digital transformation for all businesses.

## **100% Azure Focused**

As a leading UK Microsoft Partner and early adopter of Azure, we cover the full breadth of Azure services in depth, due to our 100% laser focus on the Azure platform.

## **15 Years' Experience**

We've been with Azure since the beginning, with 15 years' experience we offer unparalleled expertise and help some of the biggest enterprises in their adoption of the Azure platform.

## **Enterprise Scale**

Our extensive experience with some of the largest enterprise customers enables us to bring enterprise scale thinking to businesses of any size through our Enterprise Cloud approach.

## **Demystifying the cloud**

We work with customers of all shapes and sizes across many industry verticals and help them better understand the Azure platform and how it can transform their Business

# Benefits

Azure security capabilities offer a range of features and services that provide comprehensive protection for an organization's data and infrastructure, both in the cloud and on-premises. Some of these benefits include Centralised management, scalability, integration with on-premises security tools, advanced threat protection, compliance and regulatory support and automated responses all of which we will help you deliver.

Centralised Management

Comprehensive protection

Advanced threat protection

Compliance & regulatory support

# Assess

## **Building a multi layered, secure foundation**

We will analyse and review your organisations current security capabilities and posture. We will evaluate your license coverage or gaps and provide cost analysis of replacing existing security tooling with Azure native security services. Lastly, we will develop a roadmap to deliver solutions in line with your security aspirations and risk appetite.

# Enable

## Deploy and configure security with built-in security controls

We will look to immediately maximise your current ROI by quickly deploying and configuring any Azure security capabilities for which you are licensed but have not yet enabled. We would then work with your teams to deploy and configure in a cost-effective manner the Defender services relevant to meet your security requirements, ensuring that all agents/extensions, data connectors and supporting resources are fully operational and capable of detecting threats early with actionable insights.

# Protect

## Detect threats early with actionable insights

We help you secure your environment by remediating in a measurable way using Microsoft's secure score framework. We will improve your secure score by assessing and implementing system generated recommendations. We will help you evaluate; risk assess and remediate alerts and incidents generated by the Defender products and work with you to identify opportunities to investigate and respond to alerts and incidents rapidly with built-in orchestration and automation of common tasks.
