Certificately

# SSL Certificate Tracking and Monitoring

EASY TO USE

Start tracking hosts by simply typing a name and an optional port number. Certificately connects to the host, retrieves all relevant certificate information, and continuously monitors the host and it's certificates.

PREVENTS SERVICE DISRUPTIONS

Tracking certificates in a spreadsheet just isn't enough. Certificately proactively monitors all of your certificates and alerts you and your team about expirations or mis-configured certificates that can create a security risk.

FLEXIBLE

You can add multiple users to your accounts and assign role-based security. Guest users can view hosts and certificate information to stay informed without making account changes.

- Track and monitor SSL certificate expiration dates and avoid potential security risks. Also identify mis-configured certificates that can prevent secure access.

- Monitors certificates supporting all of the key applications used in today's IT environments: web, smtp, pop3, imap4 and ldap.

- Sends notifications on the schedule you want. Choose when to be alerted and how often. You can receive alerts via email, Slack, Teams and enterprise helpdesk solutions (in development)

- Powerful report features allow you to define the reports you want and publish them for other users. Link to your reports from other applications.

Certificately is an essential SSL certificate and monitoring SaaS application that enables IT users to track and monitor their SSL certificates' expiration dates. It is essential for any organization that manages SSL certificates to ensure that they are always valid and up-to-date to avoid potential security risks. Certificately allows IT users to monitor their SSL certificates proactively and sends timely alerts for renewal, ensuring that all their SSL certificates are current, and their websites are secure.

In today's world, where cybersecurity threats are increasing rapidly, it is essential to ensure that your SSL certificates are up-to-date and valid to prevent security breaches. Certificately provides the IT users with the ability to monitor and manage all their SSL certificates from one centralized dashboard. This SaaS application offers a user-friendly interface that makes it easy for users to navigate and quickly identify which SSL certificates need to be renewed.

Another benefit of Certificately is that it can help IT users to avoid any service disruption due to expired SSL certificates. When an SSL certificate expires, it can cause a website to be marked as insecure, leading to visitors abandoning the site, which can result in a significant loss of business revenue.

Certificately is a cost-effective solution that helps IT users save money on expensive manual SSL certificate management processes. It automates the SSL certificate management process, which reduces the chances of any human error. Certificately offers excellent value as it saves IT users a considerable amount of time, effort, and resources, allowing them to focus on other important IT tasks.
