

SOLUTION BRIEF

Axway Managed File Transfer. Powering mission-critical business.

Simplify MFT and deliver business value with scalable, flexible solutions you can deploy anywhere

Secure data and file transfer for a data-driven world

Axway Managed File Transfer gives you a secure, reliable, and easy-to-manage solution for transferring data between people, partners, businesses, and applications. Your data and files stay protected and comply with regulations such as HIPAA, PCI, DSS, and GDPR. Axway MFT empowers business users to move data faster to meet the demand for real-time applications across industries.

Axway MFT key benefits

Gain the advantages of an MFT solution that lets you manage all your critical data transfers from a single point of control.

Speed

Decrease the time it takes to create and deploy file transfers by up to 90 percent. Business users can easily create file transfer services, subscribe partners, and manage file transfers safely without requiring IT assistance, reducing bottlenecks, and increasing business agility.

Security

Enjoy centralized control of the entire MFT ecosystem via a single administration console. Predictive monitoring and alerts help you monitor file transfers so you can ensure you meet your service level agreements and avoid security-related incidents.

Simplicity

Create and publish prepopulated templates for various file transfer flows. Empower business users with easy-to-use, self-service capabilities for creating new file transfers with customers and partners.

Automation

Take advantage of automated workflows to encrypt and transfer files according to your organization's requirements.

“

Relationship and partnership were and still are essential factors in maintaining Axway as our strategic MFT supplier.

Rodrigo Nardoni, CIO, B3

Compliance

Ensure compliance by protecting files, leveraging granular visibility and control of the entire MFT ecosystem, and delivering complete audit trails for data residency and access.

Integration

Integrate administrative, flow management, and governance capabilities into third-party custom applications or IT Service Management solutions using a comprehensive set of REST APIs.

Scalability

Control all aspects of your MFT ecosystem via a single administration console for deployment, configuration, and management. You can deploy Axway Managed File Transfer anywhere as a subscription service on-premises, in a private cloud, public cloud, hybrid cloud, or in the Axway Managed Cloud.

Bolster your business growth

Innovate with smarter, more powerful components and capabilities:

- Use APIs to produce new services by integrating file transfers into business applications
- Securely unlock content to create new experiences for person-to-person sharing and collaboration
- Reuse existing MFT templates to establish business with new partners within minutes

The screenshot displays the AMPLIFY Flow Manager interface. At the top, the title is "Flow: Send Reports to PolkCounty". Below this, a flow diagram shows the process: Source (Case Reports) -> Middleware (CFT_0129_36_1) -> Protocol (PESIT) -> Relay (STEDGE_0129) -> Protocol (SFTP) -> Target (PolkCounty). The interface includes a sidebar with "FLOWS" and "Patterns" sections, and a main content area with a "Subscription List" table and flow details.

Subscription name	Source subscriber	Target subscriber	Target protocol
<input type="checkbox"/> Case Report Submission to Polk County	Records Admin	PolkCounty	SFTP

Flow Name: Send Reports to PolkCounty
Description: Move case reports for agency access

Axway MFT capabilities

From centralized flow governance to embedded analytics, Axway MFT gives you total control over your mission-critical data and file transfers.

SecureTransport

Axway SecureTransport is the most scalable and resilient MFT product for data movements on the market, with fault-tolerance and high availability to meet the critical file transfer needs of your organization.

Transfer CFT

Axway Transfer CFT takes the complexity out of integrating applications across platforms, operating systems, and locations. Build critical, high-volume, application-to-application data flows with a multiplatform, multisite file transfer controller.

Flow Manager

Axway Flow Manager centralizes flow creation, management, and governance to remove complexity and empower business users with a single easy-to-use, self-service subscribe and publish interface.

Syncplicity

Axway Syncplicity is an enterprise file sharing solution that lets you create engaging, interactive experiences for consumers and customers through rich systems integration and automation. Share files person-to-person, person-to-system, and system-to-person with uncompromising security using your choice of cloud or on-premises storage.

Managed Cloud Services

Axway Managed Cloud Services gives you the power of a cloud platform with the business and technical expertise of a world-class team. Reduce operational costs by letting our experts manage your MFT environment in a highly secure cloud environment.

“

Axway Managed File Transfer is truly the cornerstone of our data flow architecture. The solution monitors the health of our infrastructure and gives end-to-end visibility of our data flows – two critical capabilities for such a mission-critical system.

AG2R LA MONDIALE

Operational Intelligence

Axway Operational Intelligence for SecureTransport provides ultimate control by letting you see into your file transfers and respond faster to fluctuations. Proactively identify file-transfer issues and substandard partner experiences, configure alerts to ensure you meet your service level agreements, and resubmit file transfers to keep your business running.

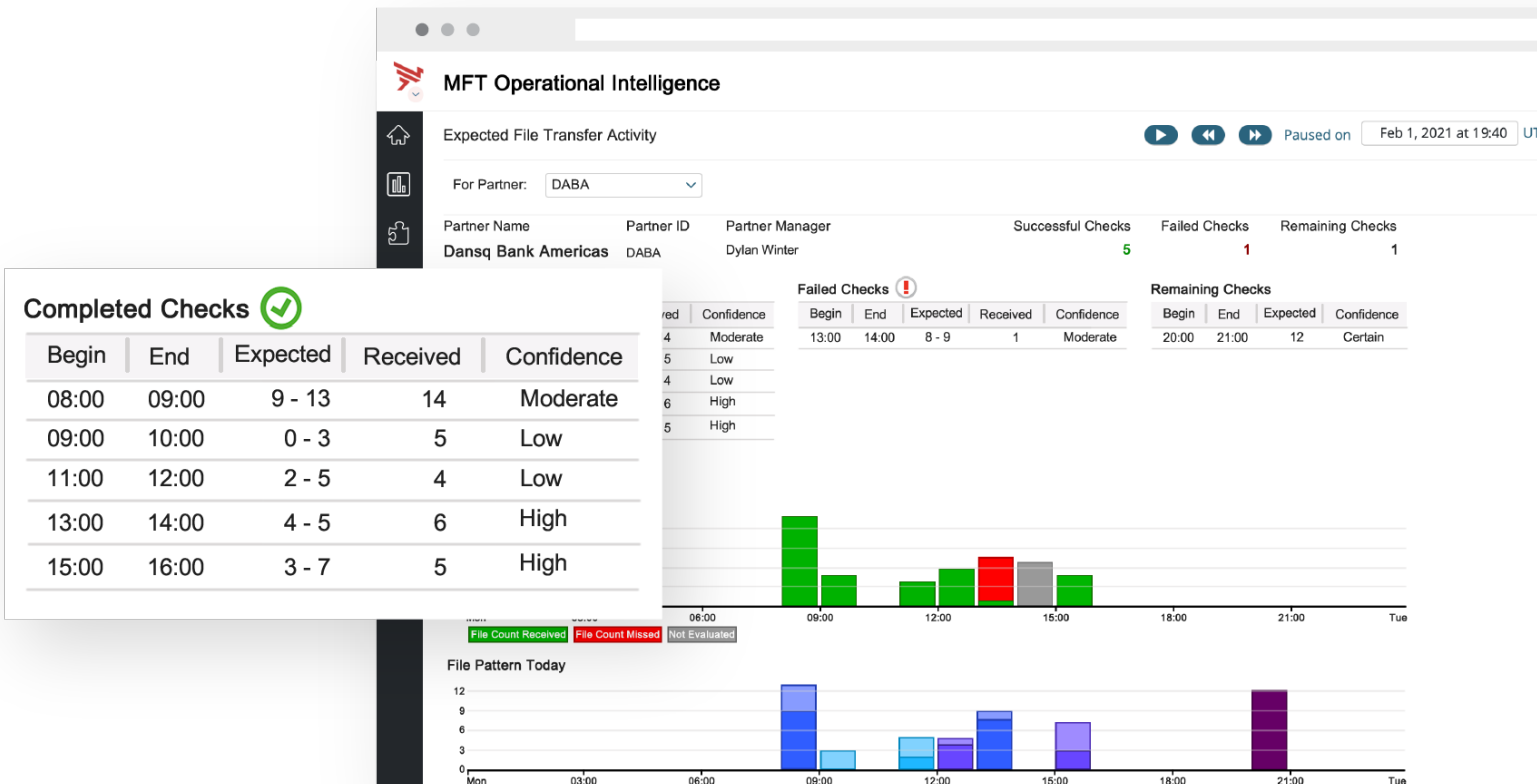

Transition Portal

Easily transition from legacy MFT solutions by assessing your current flows, enriching them, and writing them to Flow Manager using predefined template.

Secure your business

Protect data and minimize business risk with granular visibility

- Control your entire MFT ecosystem with centralized configuration and administration
- Correct issues before they impact business with real-time operational intelligence
- Ensure data residency and content access to comply with full governance and auditing

Compatible with your partners and processes

Axway Managed File Transfer offers out-of-the-box connectors and support for a wide range of operations and protocols. Engage your customers and partners across any channel or deployment model using a single solution. Axway shares the delivery accelerators, best practices, and expertise to accelerate your time to value.

Scale with confidence

Axway MFT supports the largest file transfer systems in the world and the widest variety of integration patterns

Experienced experts

We're here to help you achieve your desired outcomes – faster, smarter, and better

Deploy your way

Manage your file transfers easily and securely on-premises, in a private or public cloud, or the Axway Managed Cloud

Rapid deployment and update

Implement containerized deployments for zero downtime updates and upgrades with centralized configuration and administration
