

# SPARK TRANSCRIBER

## ACCURATE AND OBJECTIVE TRANSCRIPTS IN MINUTES

Sparkhound's SPARK Transcriber can take any recorded interview with multiple individuals and produce a transcript of the conversation using AI and LLMs in just minutes. The solution also summarizes the conversation with complete objectivity, eliminating any bias or subjectivity from the output. Public Sector agencies like Departments of Labor and Law Enforcement Agencies are getting set up in less than one week.

## How It Works

Leveraging **Microsoft Azure Cognitive Services Speech Deployment** and **Azure Logic Apps**, this is how it works:

- 1 Upload** your recorded interview, secured by **Microsoft Azure AD**.
- 2 Identify** the speakers and transcribe the speech into text through **Azure Cognitive Services Speech Deployment**.
- 3 Edit** the speakers' names and review accuracy scores.
- 4 Generate** a conversation summary.
- 5 Export** the transcript and the summary to **SharePoint Online**.

## Where to Get Started

Learn more about the SPARK Transcriber and request a demo by emailing to Dave Baxter, [dave.baxter@sparkhound.com](mailto:dave.baxter@sparkhound.com), or visiting [www.sparkhound.com](http://www.sparkhound.com). We would love to hear from you and show you how our solution can transform your interview process and outcomes.

## What It Helps

### Reduction in Time

One-hour interview can be processed in under 10 minutes, dramatically speeding up the process.

### Cost Savings

Eliminate 95% of the required human work and avoid paying for expensive external services.

### Secure Documents

You control who can access, edit, and share the transcripts and apply policies to protect your data.

### Improved Quality & Consistency

Produce accurate transcripts and summaries without human errors.

### Enhanced Insight & Analysis

Identify key findings and insights from interviews and use the transcripts to verify the information.
