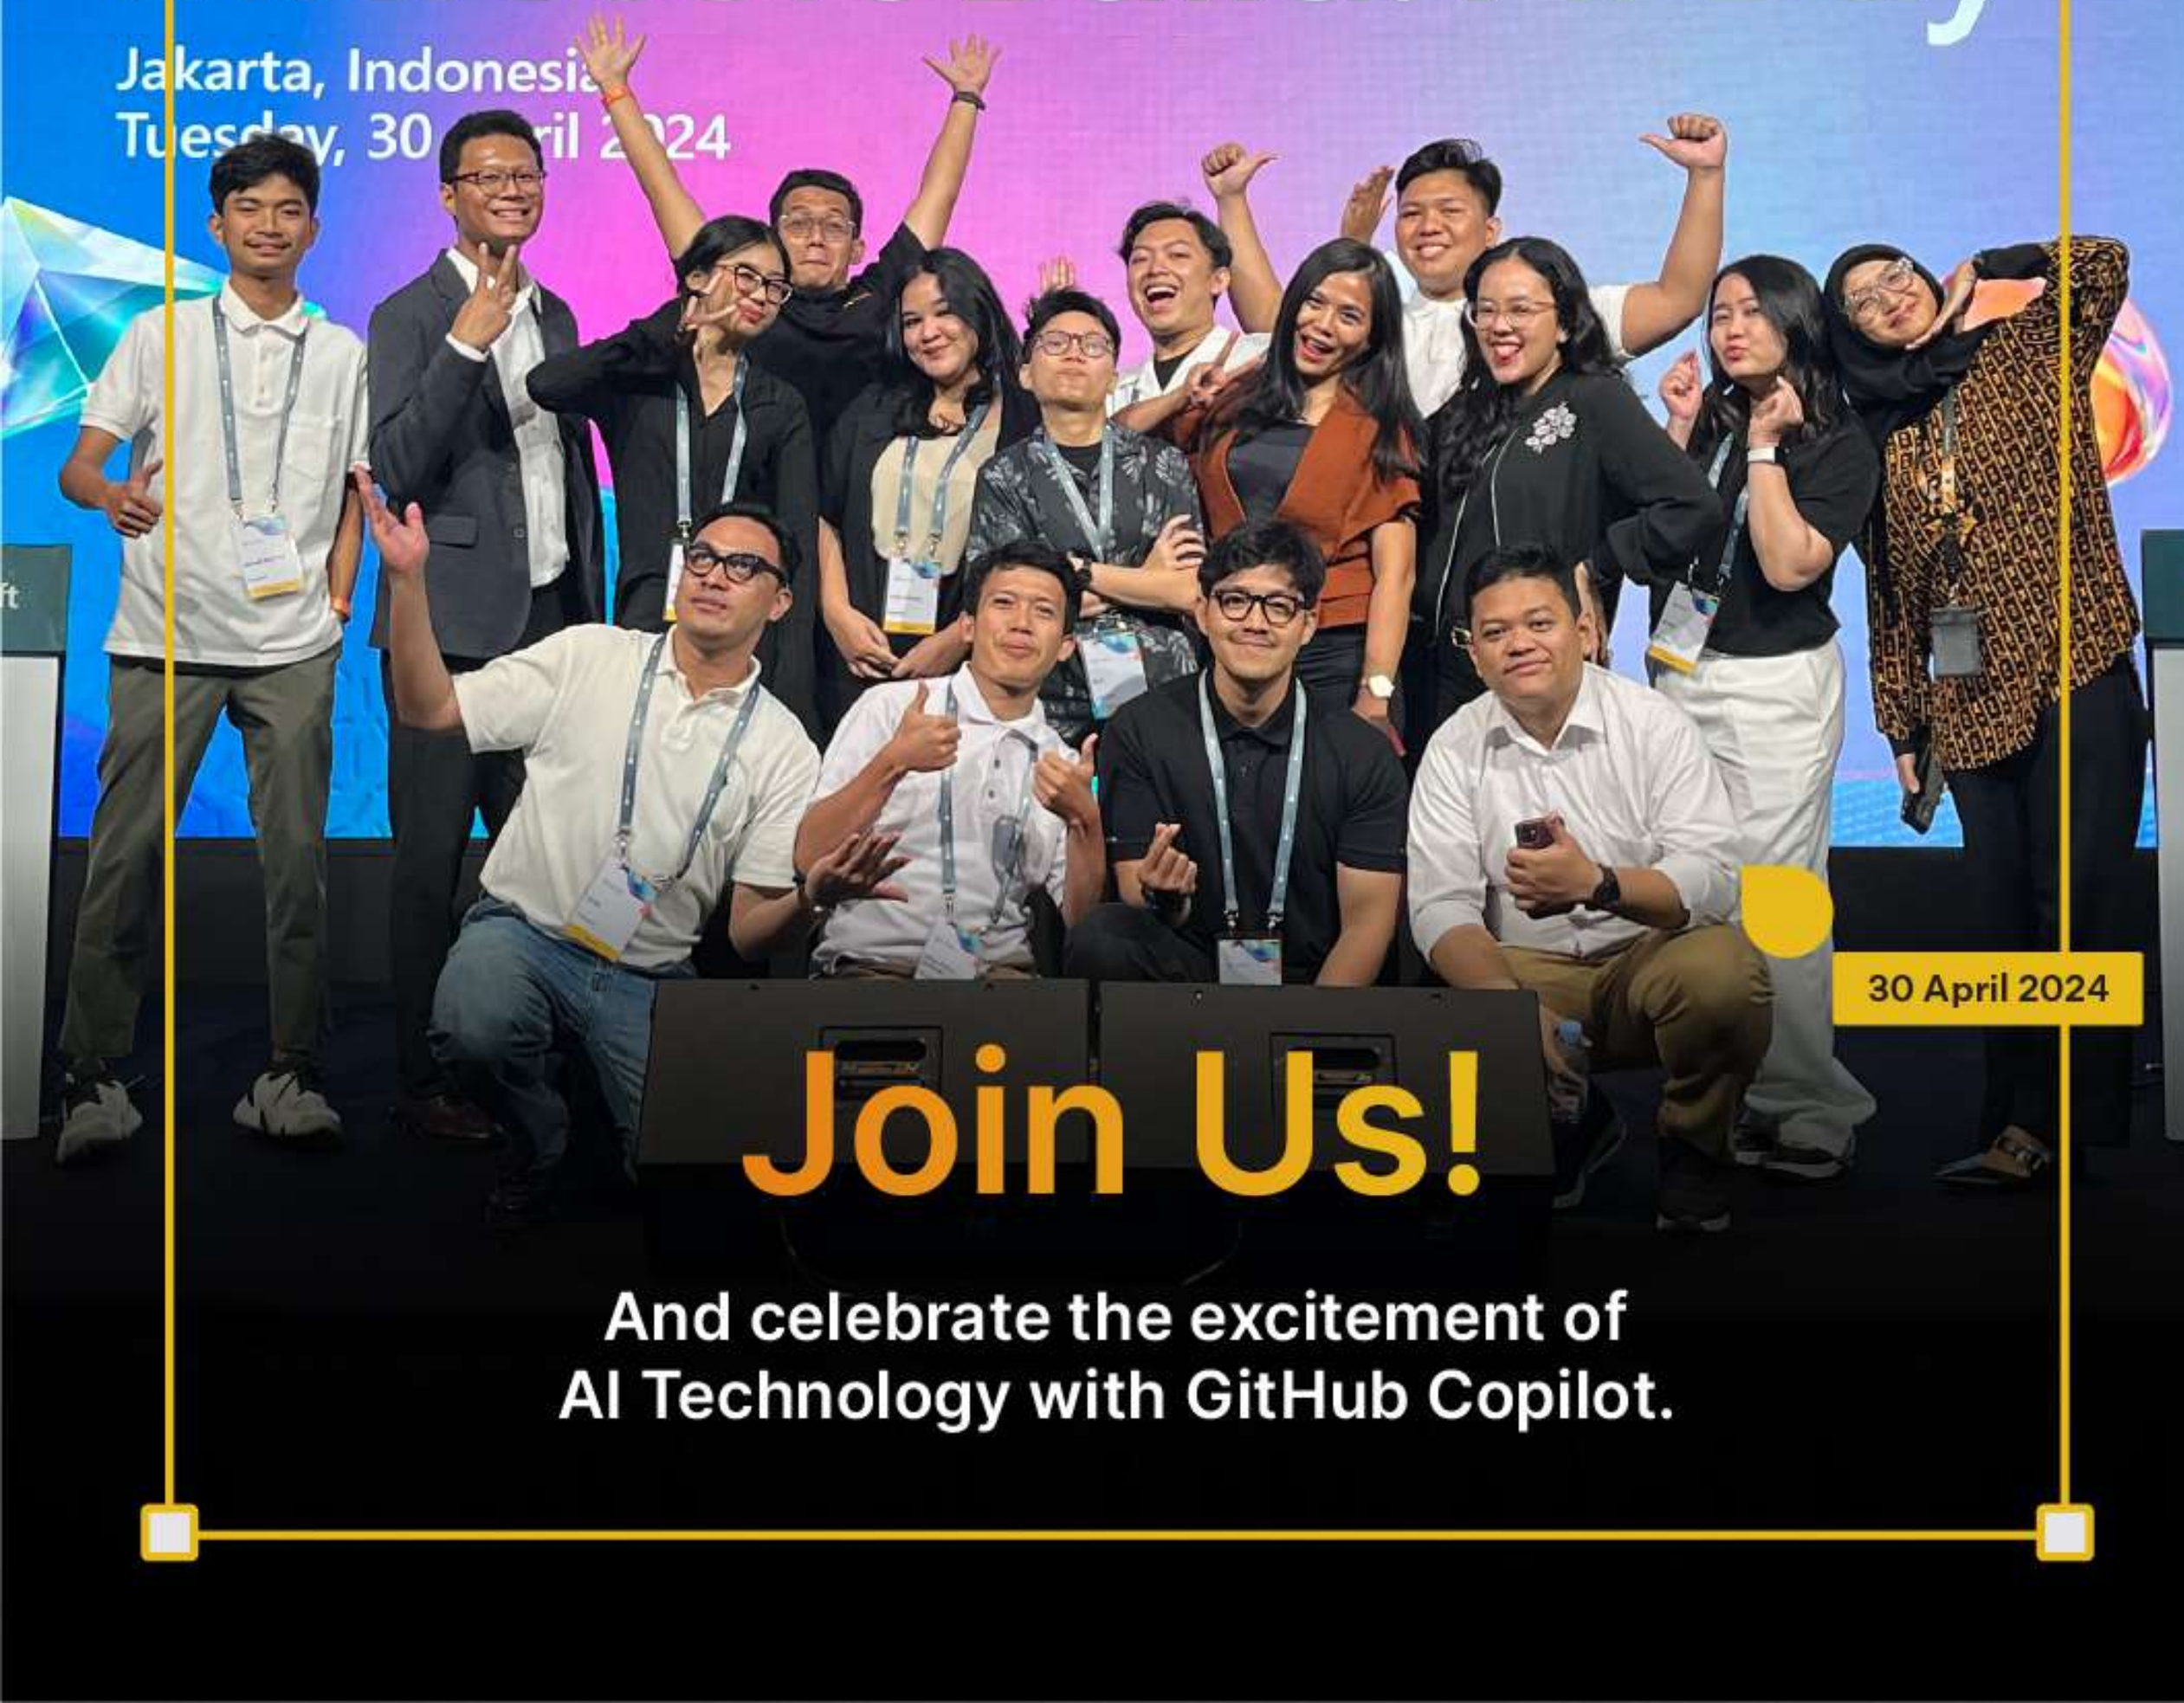
Microsoft Build: AI Day

Jakarta, Indonesia
Tuesday, 30 April 2024



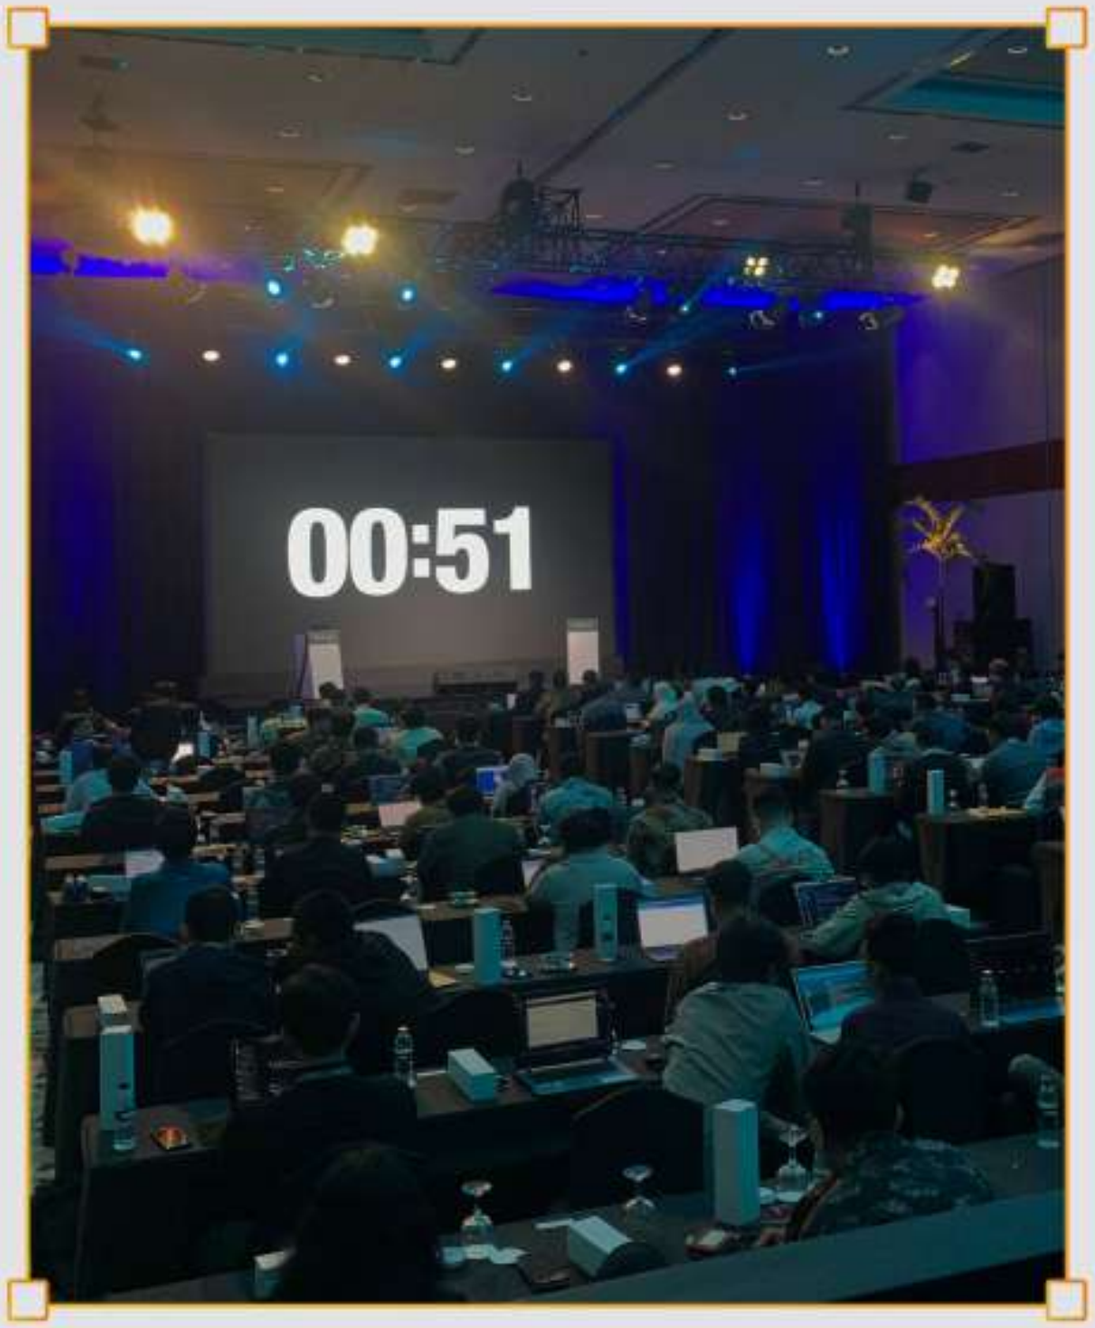
30 April 2024

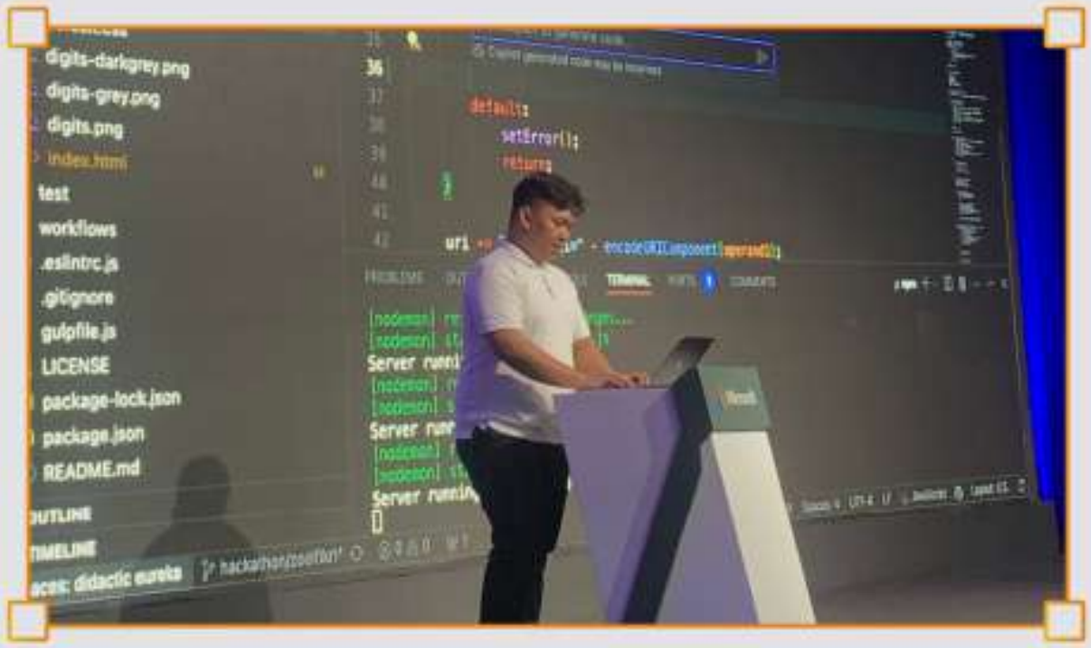
Join Us!

And celebrate the excitement of
AI Technology with GitHub Copilot.

Microsoft Build: AI Day

In collaboration with Microsoft and GitHub, we are trusted to deliver the GitHub Copilot Hackathon session for Microsoft Build AI Day 2024 in Indonesia. With this milestone, our experts will serve as speakers at the event, explaining GitHub Copilot and creating challenges for the Hackathon session. This marks our third time hosting offline and virtual events for the GitHub Copilot Hackathon in 2024. We are committed to continuing to create more events in the future.





GitHub Copilot

As part of AI technology, GitHub Copilot is designed to assist developers in writing code more efficiently and accurately. It is an AI-powered code completion tool developed by GitHub in collaboration with OpenAI. In addition to explaining GitHub Copilot, we will also perform demos for prompt crafting that showcase GitHub Copilot's functionalities. Participants will have hands-on experiences applying GitHub Copilot in person. Through these experiences, we aim to provide participants with a better understanding of GitHub Copilot.
