

Dataweavers Solr as a Service

Apache Solr for demanding Sitecore customers

Dataweavers Solr as a Service

Dataweavers provides organisations with Managed Solr on Microsoft AKS (Azure Kubernetes Service).

Designed to handle customers with both simple vanilla and complex, highly customised Solr environments, our unique containerised approach reduces complexity whilst deploying on a modern scalable cloud architecture.

Highly Available

Our AKS clusters allow you to scale regionally and globally to suit your needs.

24/7 365 Support

We stay switched on so you can switch off, with up to 99.999% availability options.

Global AKS Clusters

10 global AKS Container Clusters deliver low latency and stability for Solr.

Secure

Built-in security and strong ITSM standards that meet global and regional compliance standards.

Reporting

Partnering with New Relic, we provide intelligent dashboards to give you detailed health and reports on your clusters.

Suitable for Development and Production Environments

Whether you need development or production environments our service is cost effective and scales to suit your budget and requirements.

Talk to us about your architecture and we can recommend best practices.

Pricing

Development from **\$69 USD per month**

Production from **\$299 USD per month**
