

MICROSOFT FABRIC CO-MANAGED SERVICES

Managing and creating a robust data warehouse can be complex and time-consuming. As a business seeking insights from data across your organization, it's crucial to connect and centralize your data from disparate sources to enable the outcome of meaningful insights. Adopting Microsoft fabric facilitates achieving this goal, and our co-managed services expedite the process by following best practices, addressing hurdles, and bridging knowledge gaps in both centralization and data engineering aspects. The team of experts assigned to your company will work with you to not only set up, deploy, and manage your data for a unified SaaS experience but also through our add ons for including data engineering resources as part of your data journey you will be able to generate meaningful and actionable analytics for your business.

With our co-managed approach

Centralize, Manage, and Power your Data Needs

Start your data journey with us to accelerate adoption and deployment, steering clear of costly mistakes in architecting your data estate. With our team of data scientists, you will benefit from the potential for meaningful outcomes.

Why Imperium for your Fabric Journey

Technical Expertise

We specialize in providing technical support for all platform components like Power BI, Data Factory, Synapse Analytics, and more. Our team consists of experienced technical and solution architects who are adept at addressing challenges that may require additional resources or expertise beyond what in-house administrators are meant to do.

Cost-Effective Alternative

Employing a full-time technical architect for periodical work may not be practical. Our co-managed support provides expert assistance without the overhead costs of hiring additional staff. With our co-managed plans for Fabric, you can unify, prepare and model data to be used across the Microsoft ecosystem.

Governance and Continuous Improvement

Our support services are geared towards governance and driving continuous enhancements. With Development and Support credits/hours, you can utilize our expertise for change requests, system administration, health checks, and environment management.

- * Support hours for products bugs, platform issues, addressing critical downtime and investigation of customer issues.
- ** Development hours for new feature requests, new reports and enhancements to the system.
