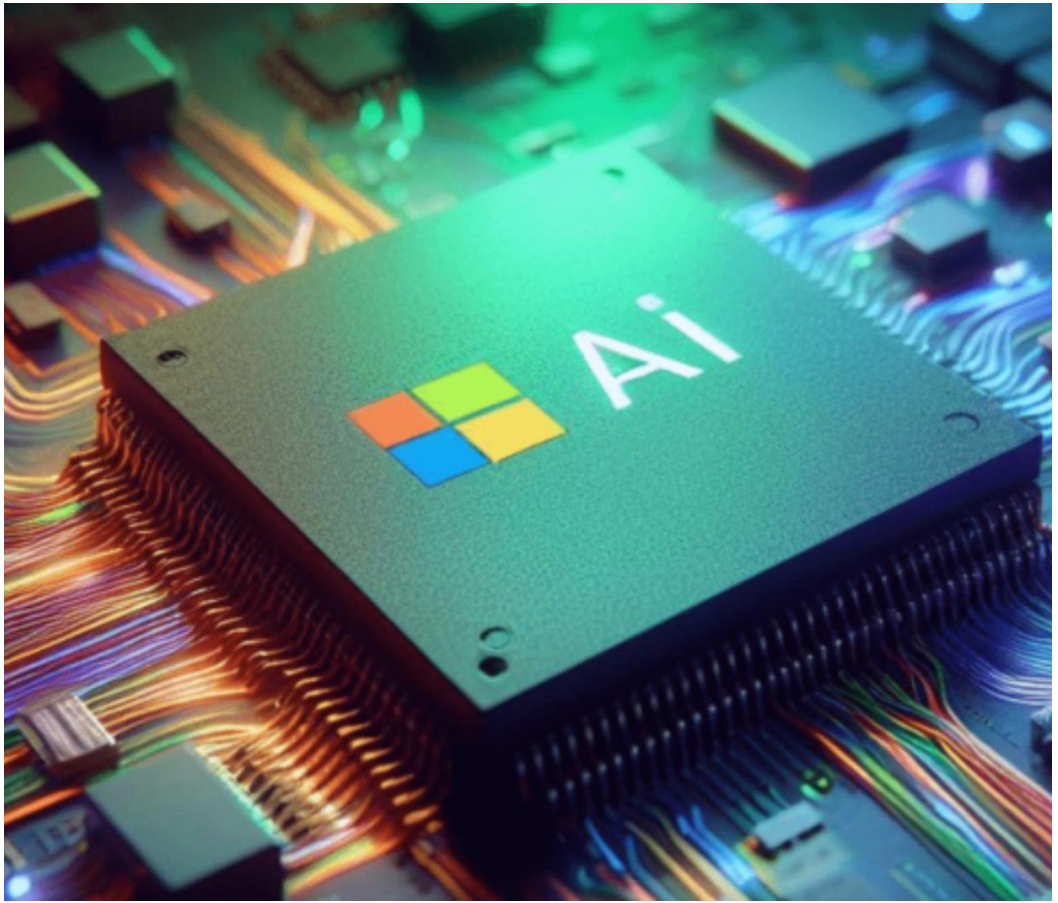
Microsoft AI Skipper

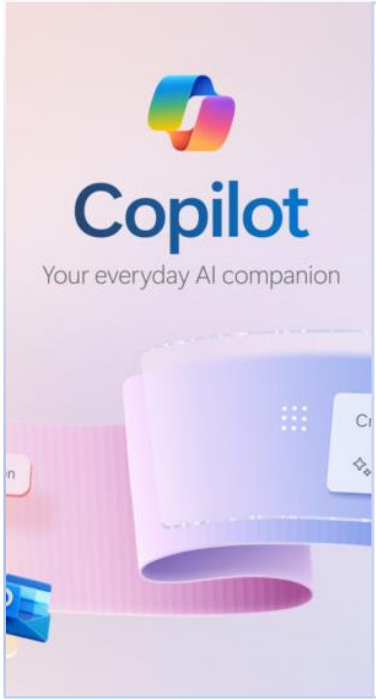
Presented By: Aqeel Haider



Agenda

1	The Skipper
2	Versions
3	Timelines, Staffing and Cost

Copilot Options



I want a generative AI enabled chat application

Do you want to build your own app interface or leverage a managed, integrated experience?

Managed/Not sure

Build my own

Do you want the model to generate answers based on your own data sources?

No

Yes

Do you need full dev control over the app and model behavior, in addition to data and feature integrations?

No

Yes

Bing Chat Enterprise

- Use OpenAI models and up-to-date web data to generate answers with transparent sources
- Data travels outside tenant boundary but corporate data is protected from AI training
- No additional cost for some M365 SKUs

M365 Copilot

- Powered by the Microsoft Graph and integrated into M365 applications
- Extensible with an ecosystem of plugins/connectors
- Easy toggle on the browser to use M365 Chat on the web or Bing Chat Enterprise

Copilot Studio

- Create chatbot experiences leveraging low code tools and Azure OpenAI Service out of the box.
- Dynamically create chatbots grounded on a variety of data sources or webpages
- Extend with connectors to additional applications

Azure AI Studio

- Developer friendly, enterprise-secure environment to access Azure OpenAI models
- Build an internal or external facing chat app using any data source or type
- Tailor and optimize chat responses based on your current and latest data

What tool to use for what purpose?

The Skipper

1. Presenting the Cambay Skipper: An AI Bot integrating Power Virtual Agents, Azure OpenAI, and connectors.
2. Facilitates AI-generated responses for service agents or customers on Intranet or websites.
3. Assists employees by providing AI-generated responses and accessing company information on SharePoint or MS Teams.
4. Aids sales staff by deploying a BOT within SharePoint Online or MS Teams, linked to D365 CRM content for efficient customer data retrieval.
5. **Deployment of the Cambay Skipper boosts customer and employee engagement, while reducing costs and enhancing responsiveness.**

Versions :

1. Lite : Basic version using out of the box Azure Open AI services
2. Standard: a more enhanced version using customized data sources ingested into a datastore with Azure Open AI services configured to produce the results
3. Enterprise: a customized deployment where your data is fully ingested from up to 3 sources and the model trained specifically for your data using Azure Open AI advanced features

Phases, Timelines, Staffing and Costs

The Lite and standard engagement may range between **2 – 3 weeks** based on client complexity and number of applications

Delivery lead and AI Architect kickoff project. Security resource may join in week 2. **Costs range from 10k-20k.**

Understand your environment

Deploy Bot & Train the Model

Operationalize, go-to-market
