

Maintain security and productivity in Microsoft Teams

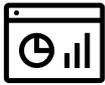

With the explosive adoption of Microsoft Teams as the collaboration software of choice, two major challenges are emerging: how to mitigate the security risks of “open by design” collaboration software and at the same time improve end-user productivity.

PortalTalk from QS solutions is fully integrated in Microsoft Teams and has been specifically developed to address both of these challenges. PortalTalk makes it possible to improve both security and end-user productivity at the same time.

Discover the benefits

PortalTalk is a cloud-based add-on product for Microsoft Teams which makes it possible to improve both security and end-user productivity at the same time.

Personal workspace with most-used Teams and search function

Create Teams in categories with templates and automatic naming convention

Perform regular Access Review of external users and document sharing

Comprehensive reports and KPI Analytics for IT Administrators

How it works

PortalTalk is a fully integrated, cloud-based software product which provides comprehensive security and governance functionality for Teams including:

- Personal Dashboard with most-used Teams
- Approval workflows for creating Teams
- Template management and categorising Teams
- User Access Management
- Access Review and Document share Review
- Comprehensive reporting pack for IT Administrators

“PortalTalk integrates seamlessly into Microsoft Teams and makes Security and Team Governance simple for IT administrators and end-users.”
