Optimize Insights with Microsoft Fabric

When migrating from business intelligence tools to Microsoft Fabric, you gain more than just technological advancements; you build sophisticated data and analytics services that foster collaboration and drive innovation. By consolidating all essential data services within a unified SaaS-based framework, you can optimize storage and computing resources efficiently, ensuring both scalability and performance while maintaining effective cost control.

Business Challenges

- ◆ Scalability issues
- ◆ Legacy & performance issues
- ◆ Job monitoring & scheduling
- ◆ Data fragmentation
- ◆ Security concerns
- ◆ Technology disconnected from business value

Microsoft Fabric: Transformative Benefits

Diverse Deployment

Supports a wide range of SAP products including SAP Business One, SAP Business Suite, SAP BW/4HANA, SAP S/4HANA, SAP HANA, and SAP Hybris, providing flexibility for various business needs.

Unmatched Security & Compliance

Provides robust security measures and compliance standards, safeguarding data integrity and meeting regulatory requirements efficiently.

Significant Cost Reductions

Offers an average cost saving of **up to 40%** compared to traditional on-premise hosting, optimizing IT spend and resource allocation.

Enhanced Analytics & Intelligence

Integrates advanced analytics capabilities and business intelligence tools, empowering businesses with deeper insights for informed decision-making.

High Reliability & Scalability

Guarantees superior **reliability** with service-level agreements (SLAs) reaching up to five nines (**99.999%**), ensuring minimal downtime and adaptable scalability for growing business demands.

The Infinite Process

Assessment & Planning

Evaluate SAP BW environment, including customizations, integrations, and data volume and strategize migration goals timelines.

Design & Provisioning

Prepare Azure services that will host the BW environment, focusing on scalability, security, and integration aspects.

Ensure secure and reliable connections between your on-premise network and Azure, using VPNs or Azure ExpressRoute.

Migration Execution

Utilize tools like the Software Update Manager (SUM) or Azure Database Migration Service (DMS) for the migration of BW objects.

Conduct thorough testing to ensure the migrated BW environment functions correctly and meets performance benchmarks.

Optimize & Manage

Post-migration, fine-tune the BW on Azure setup for optimal performance and cost efficiency.

Testing & Validation

For organizations looking to expand their analytics capabilities, integrating Azure Synapse Analytics can provide advanced analytics and AI features, enriching the data analysis further.

Infinite can help you transition from legacy data capabilities to a new era of AI-driven intelligent enterprises.
