

Bring modern authentication to everyday apps

What if you could...

Extend modern authentication practices to more applications across your business

Improve productivity with access to Microsoft applications at the HP control panel

Increase efficiency by facilitating single-sign-on leveraging Azure AD

Microsoft M365 Workpath Bundle

The challenge

Organizations need a range of applications at the device level to replicate a user's desktop environment, enhancing productivity and applying data security best practices. Achieving this starts with overcoming specific challenges:

Providing a simplified user login experience linked to an organization's identity management system

Enabling employees to find, access, print, scan, and share information

Building a single sign-on approach to core Microsoft applications at the device

Eliminating inefficiencies caused by systems that do not connect

The solution

The Microsoft 365 Workpath bundle works with HP Authentication Manager to provide secure authentication with a single sign-on experience. End users can directly scan, print, email, and search from applications like SharePoint, OneDrive, and Outlook.

Simplifies actions for users with familiar features and functions

Saves time by performing tasks directly from the HP device console

Offers easy deployment and management leveraging Azure AD

Improves security with modern authentication methods based on Zero Trust

"As a Microsoft-centric organization, having the ability to provide users with a familiar experience at the device, is a significant benefit as it simplifies how users access key platforms for scanning and printing, while maintaining strict data access policies."

Microsoft M365 Workpath Bundle

Universal Print

Enable per-user print queue and job management while eliminating the need for printer firmware updates. Experience simple, driverless printing with seamless integration into Azure Active Directory. Serverless deployment removes the requirement for on-premise print servers.

Microsoft SharePoint

Enable users to scan to and print from their SharePoint account using the printer control panel by establishing a direct connection between the HP printer and the user's SharePoint account. Users can perform scanning, printing, and emailing tasks within SharePoint in one integrated step.

HP Mail Flow

Create an integrated email experience, allowing users to read, reply, attach scans, and print messages and attachments, all from the printer's touch panel. Quickly reply to emails with scanned attachments while preserving conversational context. Self-populate email addresses from the connected directory and transfer subject lines for a streamlined workflow.

Microsoft OneDrive for Business

Enable users to scan to and print from their OneDrive account using the printer control panel by establishing a direct connection between the HP printer and the user's OneDrive account. Users can perform scanning, printing, and emailing tasks within OneDrive in a single integrated step.

HP AUTHENTICATION MANAGER

HP Authentication Manager allows organizations to link to their existing identity management system (e.g., Azure Active Directory), deploy an authenticating application to the printer through the HP Workpath environment, and authenticate users using a range of multi-factor solutions.

HP SECURE AUTHENTICATION

HP Secure Authentication is a smartphone companion authenticator application that emulates a proximity card using Bluetooth or NFC technology, and enables QR Code login via HP Authentication Manager.
