ClideBox
Your Client Design Out-of-the-Box

CLIDEBOX –
CLIENT DESIGN OUT OF THE BOX

Security, functionality, timeliness – there are many expectations for IT, as well as the continuous deployment of the latest version of Windows 10 and 11.
Migrating or upgrading to a new version of Windows 10 or 11 often presents administrators of the internal IT department with recurring tasks, time-consuming research of all new features and configuration options, and discontinued features.

We address this problem with ClideBox and provide a professional, supportive self-service to ensure smooth migration and updating as well as later operation of your client operating system. ClideBox facilitates compliance with internal compliance guidelines and requirements in accordance with applicable laws.

- Web-based self-service solution for client design creation including export of configuration and documentation of client design
- Standardized templates for client design creation e.g. adapted to the GDPR standard, BSI recommendations or trans4mation best practice (company standard)
- Provide a virtual machine to visualize settings
- Managed Intune ready
- Display and ability to rectify incompatibility

COST AND TIME SAVINGS

COMPLIANCE RECOMMENDATION

MICROSOFT INTUNE READY

TRANSPARENT PRESENTATION AND DOCUMENTATION

IN A FEW STEPS TO YOUR CLIENT DESIGN

CLIENT DESIGN CONFIGURATOR

With ClideBox's unique, intuitive web interface, configuring a client design is no longer a major challenge for your IT department. A guided setup as well as comprehensive descriptions of the possible configuration parameters of your operating system provide you with a considerable ease of work. Time-consuming workshops with your service provider and associated costs are no longer required or can be reduced to a minimum without having to do without professional know-how. All configurations are automatically checked for functionality, so there is nothing to stop them from being introduced efficiently. With our client design configurator, you can use prefabricated templates that allow you to configure your client design according to the latest legal compliance requirements, e.g. according to GDPR, without any in-depth knowledge. Finally, you'll get your configuration as a CSV file and Word documentation, or even direct deployment to your Intune environment.

INTEGRATION WITH MICROSOFT INTUNE

The Intune integration allows the client design created and the resulting configuration to be transferred directly from ClideBox to your Intune tenant. To comply with security policies, additional authentication with the Microsoft credentials on the Intune tenant is required. It checks your configured client design for Intune-enabled settings and transfers them fully automated to your Intune profile. Existing settings and configurations are not changed, only new objects are created. After verification and transmission, these settings can be distributed among the appropriate clients. By adding an additional connection to your cloud environment, the configuration is loaded and applied directly into the administrative system.
