- Project Management
- Meetings
- Team Collaboration
- Construction

Productivity

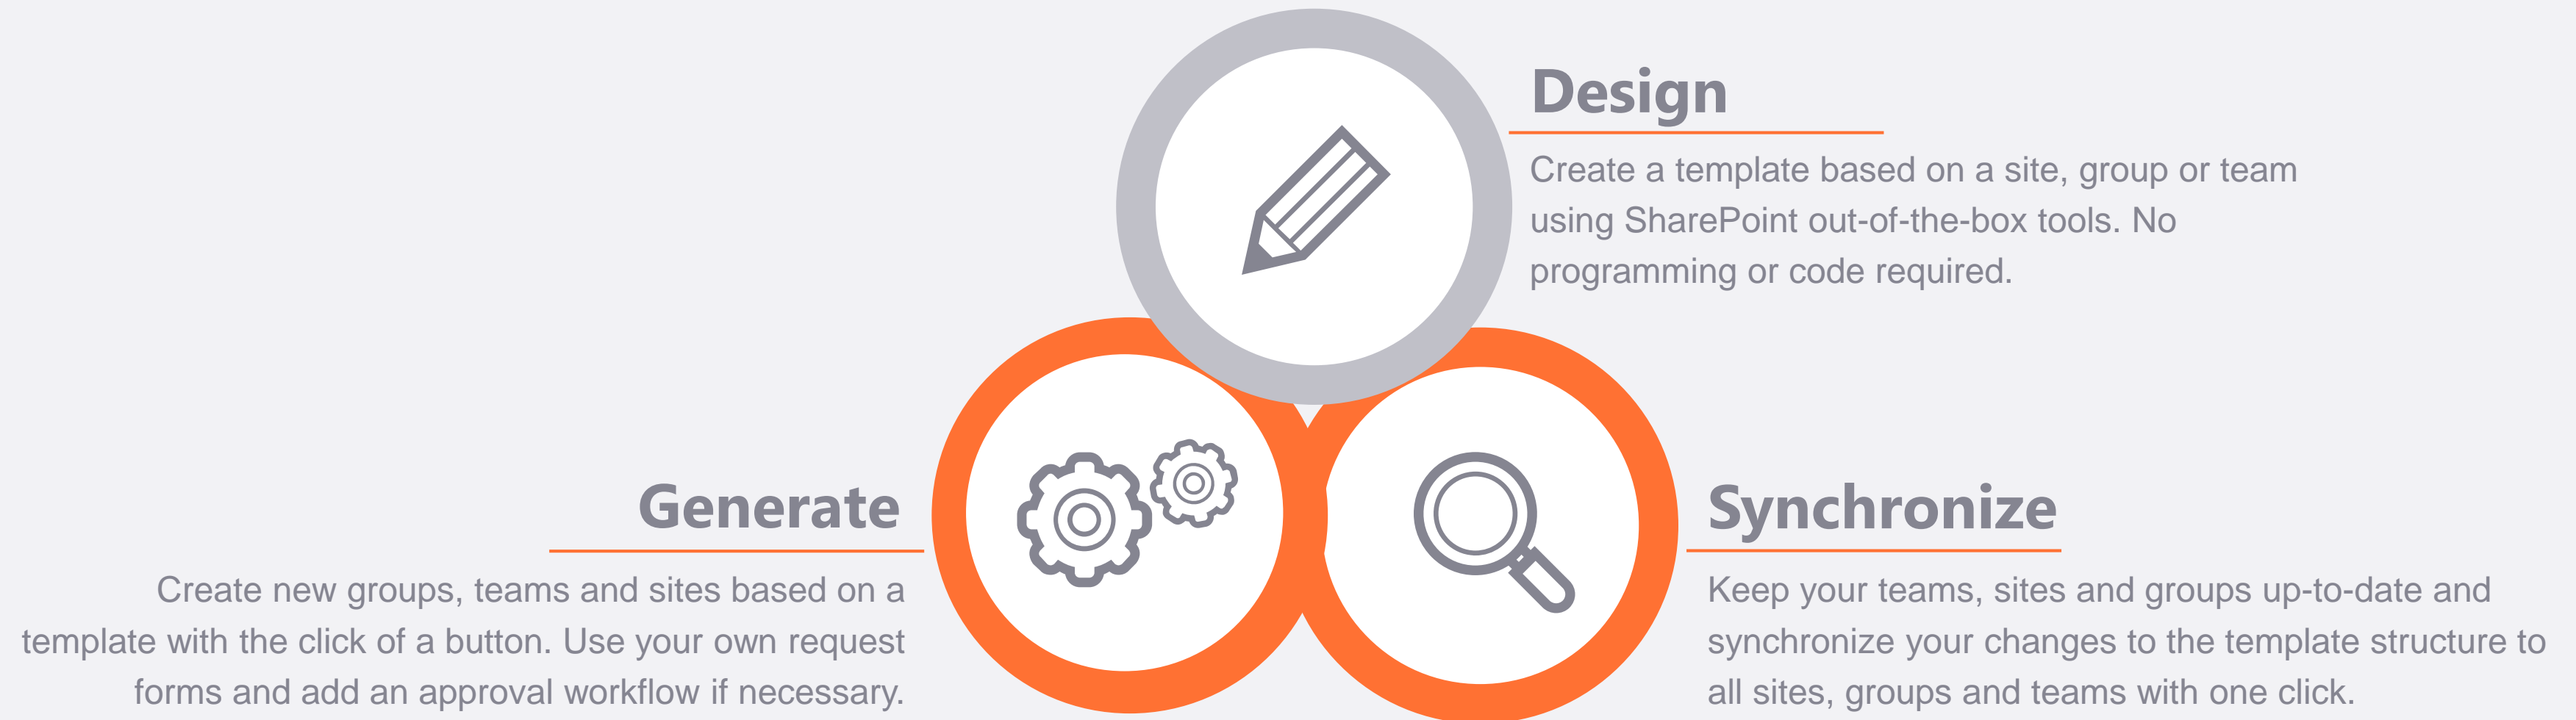

Data and processes web parts:

- List of all teamsites
- Recently changed documents
- Open tasks
- Upcoming events
- ... and many more

Collaboration Manager

320
Installations

The Collaboration Manager for Office 365 has been available since April 2014 and is currently active on more than 320 tenants in the cloud. **Now also with integration into groups and Microsoft Teams.**

Available for all platforms

Features

#1

Site request

Request sites, groups and teams in a standard SharePoint list and add an approval workflow. Get your fully functional site, group or team without any manual configuration in a few minutes and start working on your project.

Top speed

Start your collaboration portal within minutes. Just install the app from our website and start requesting sites, groups and teams with just a click.

Self-service portal

Enable your users to create new sites, groups and teams (site collection based) without the need of administrator permissions. Give them the opportunity to design their own templates and to add changes to existing sites.

Governance

Get control of your SharePoint Online environment with a custom request process as well as group and user management. Apply governance rules through all your SharePoint sites, groups and teams.

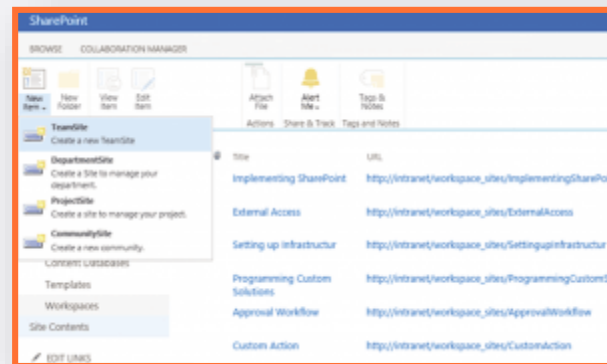

Save money

Reduce your administrative effort by using the Collaboration Manager. Don't waste time by creating sites, groups or teams manually or setting user permissions by yourself.

Features

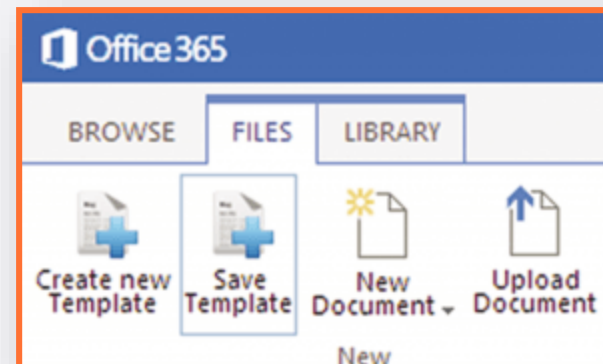

#2

Provisioning

Our provisioning solution will help you process requests for new sites, groups or teams much faster. The self-service portal will be made accessible to all your users while you can control the optional approval process by either using Microsoft Flow, K2 or **Nintex** workflow engine.

Our backend will then create a site, group or team based on a template you have created before. All without the need to interact with IT department.

Template Engine

Create custom templates for SharePoint sites, groups and teams with just one click. Customize your site with the use of SharePoint native functionality, e.g.

- Activate site / site collection features
- Edit navigation
- Use custom logo
- Use custom color schema
- Install apps
- Create lists and libraries
- Create content types

... and much more!

Synchronization

After you have created a template and started using it, you may want to improve or change the template. But what to do with all the existing sites which have been provisioned already using the “old” template?

With Collaboration Manager it is easy to roll out the changes to those sites, groups and teams as well! Our synchronization functionality will update all existing sites – automatically.

What our customers say

"The Collaboration Manager at TenneT now ensures that all network expansion projects work with uniform and always up-to-date SharePoint sites. This ensures consistent and transparent internal project collaboration for over 25 network expansion projects."

Madeleine Dollmantel

Business Project Lead OneDMS,
TenneT TSO GmbH

"By using Collaboration Manager we are saving a considerable amount of time in daily business (creating / configuring SiteCollections) and thus are able to focus on new projects and innovations. Without Collaboration Manager it simply wouldn't work for us any more."

Michaela Meissner

ECM Consultant, BAUER AG

"Thanks to automatic site provisioning with different templates, the collaboration and project portal of my customer is now super easy to use."

Markus Kawollek

CEO, nuboworkers GmbH

Collaboration Manager vs. PNP

Collaboration Manager

Provisioning of Microsoft Teams, groups with modern sites and classic sites	✓
Stable and reliable solution, dedicated support team	✓
Installation in 15 minutes – get started instantly	✓
Hosting included in license fee	✓
Constant updates and development of new features by Solutions2Share	✓

PNP Sites Core

✗	Provisioning of classic sites
✗	Open source: available free of charge, but no guarantee for continuity, no support
✗	Solution has to be programmed based on source code
✗	Additional costs for hosting the solution (e.g. in Azure)
✗	Additional costs for maintenance and upkeep

| Benefits for you

We provide a 360-degree solution

Groups, Microsoft Teams, modern sites and classic site provisioning for all platforms (SharePoint 2010 / 2013 / 2016 /2019 and Office 365)

Save money with subscription

No hosting, no maintenance and no development saves you a lot of money. Get PAAS – provisioning as a service.

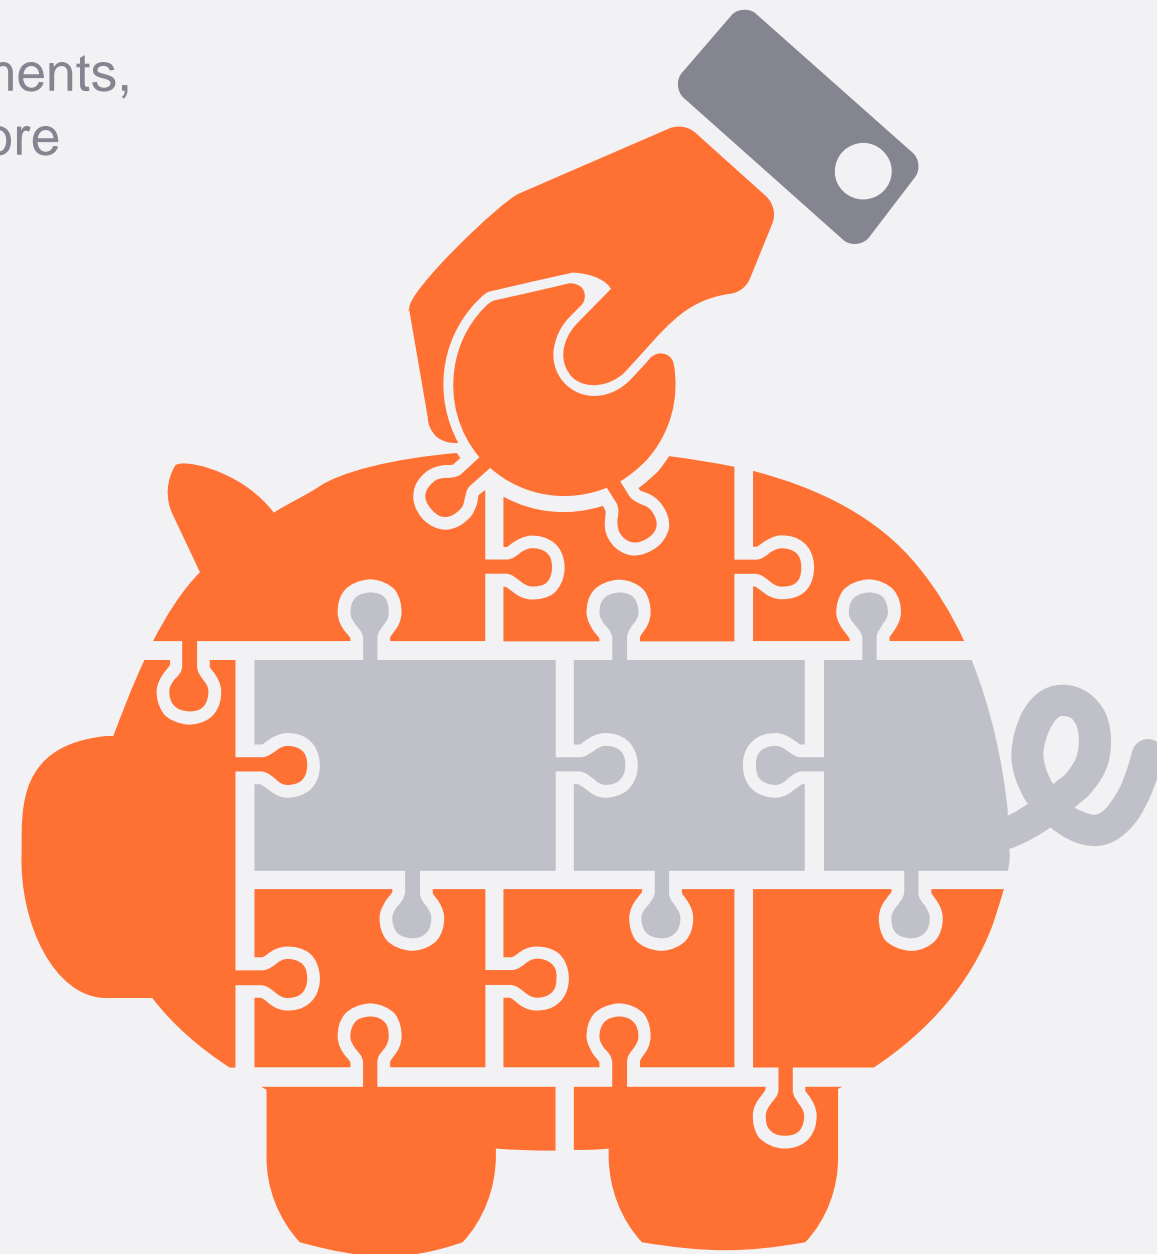

We provide dedicated support

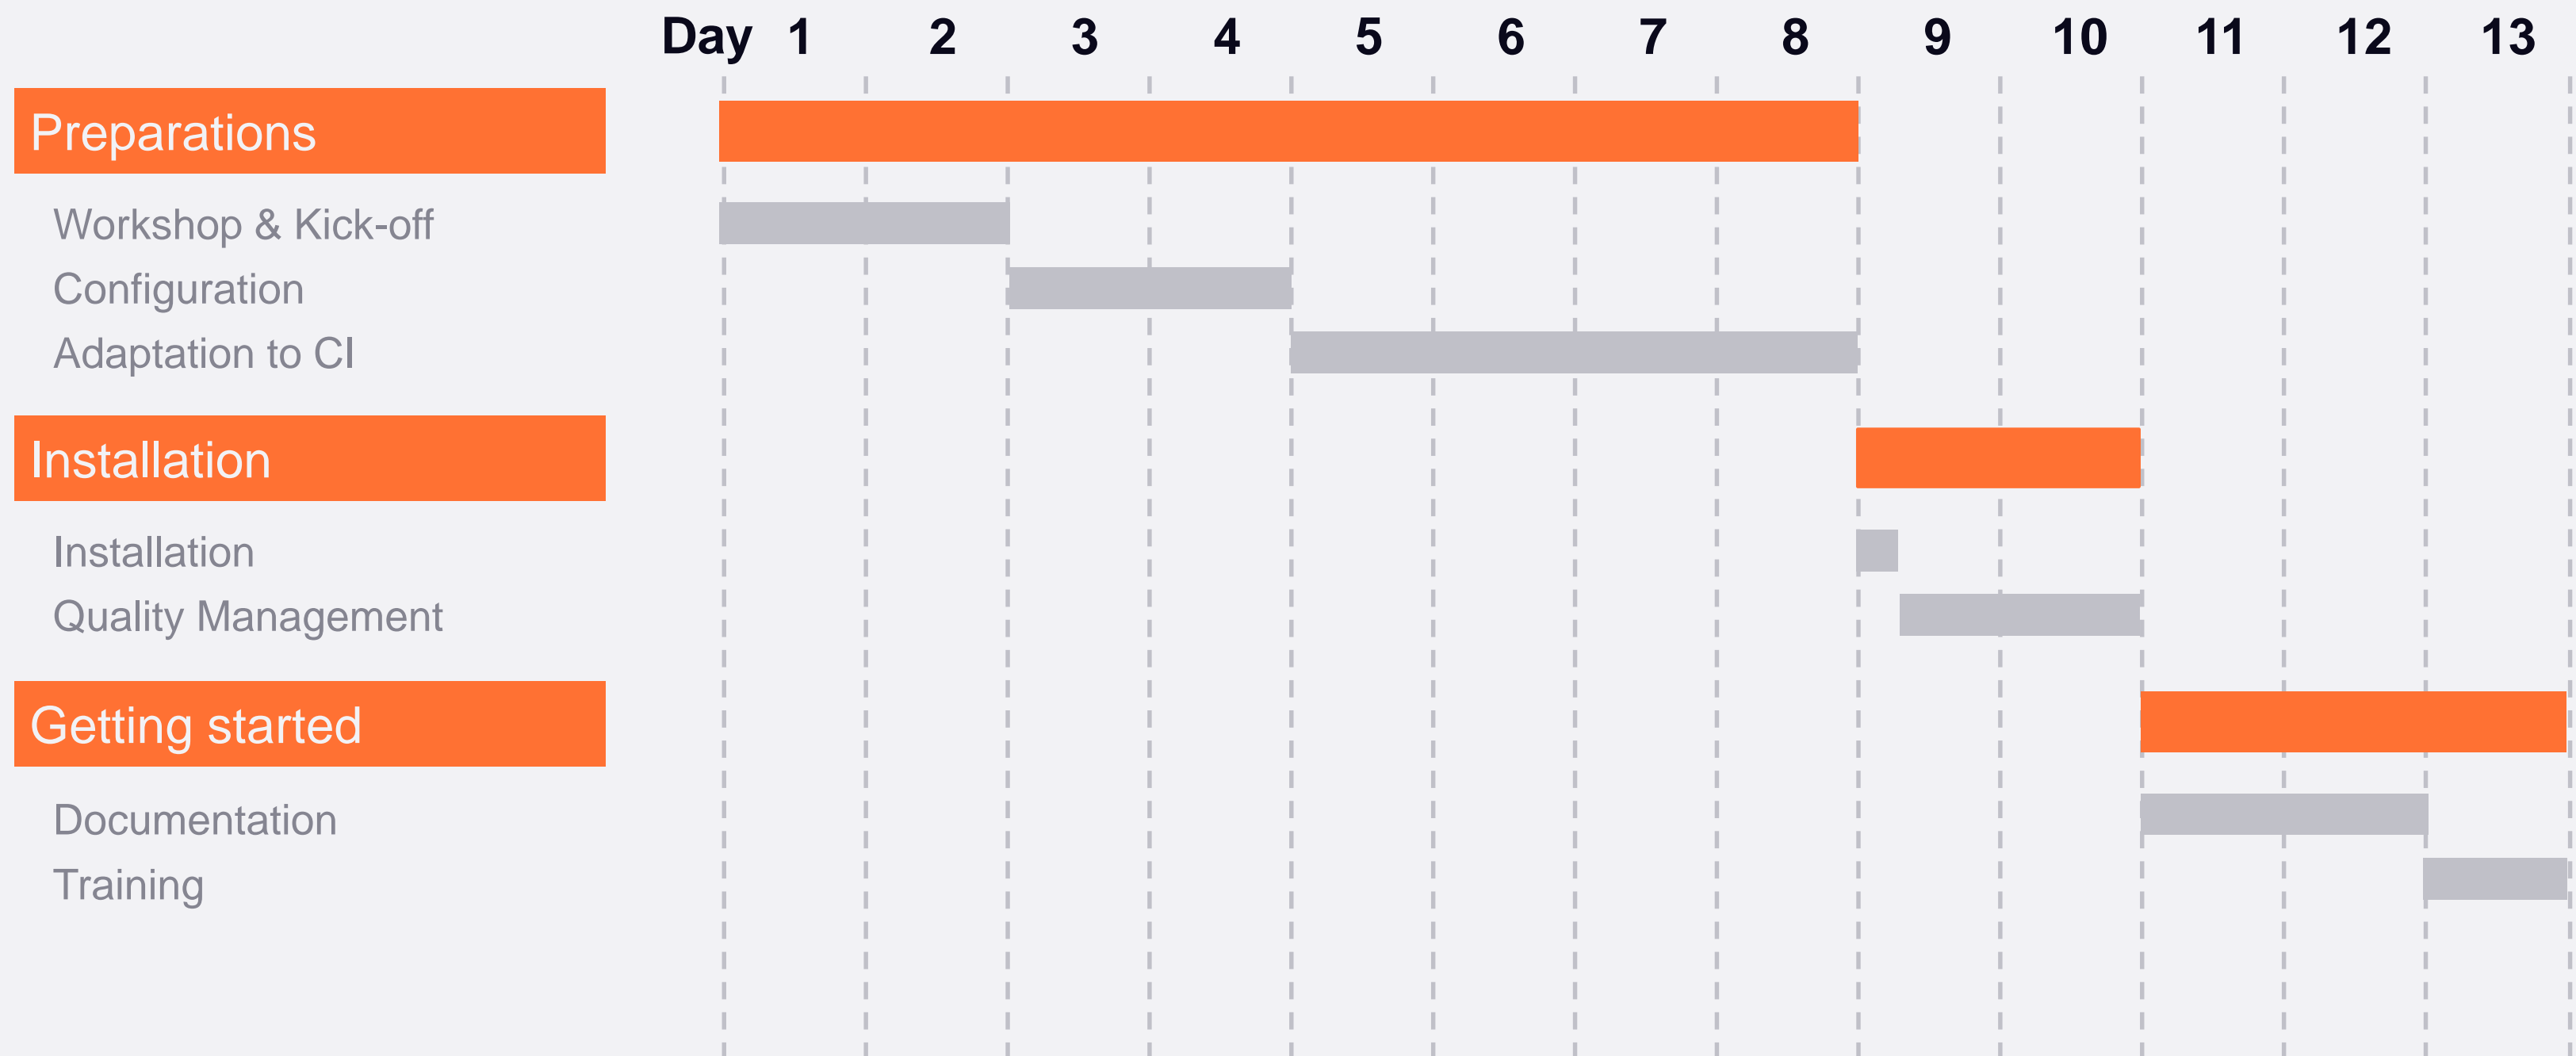

Support in English and German from Monday to Friday 8am – 6pm

Take advantage!

- ✓ Provision complex templates including everything from PNP and List elements, to files, pages, multi-language support, apps from AppStore and many more
- ✓ Regular updates - always stay on top of new Microsoft developments
- ✓ Quick and easy start – with all the support you need
- ✓ Easy migration to new SharePoint versions
- ✓ No application lifecycle management
- ✓ No development time / internal costs
- ✓ Full flexibility – changes can be made easily and more cost effective
- ✓ Better acceptance – individual solutions possible

Implementation timeline

30 Day Free Trial Version
