

Comprehensive Care Home Management: Cura Tablet

Cura Systems is the leading innovator in Care Home Management Systems, creating the most comprehensive software solution with the widest scope of functionality.

Cura Tablet, as the name suggests, is a tablet-based application (app) that is specifically designed for use by the care workers at the point of care delivery.

Cura Tablet helps care workers make better decisions and provide better quality of care.

Cura Tablet also utilises an intuitive module - it analyses the health data the care worker inputs during care delivery and produces a National Early Warning Score (NEWS) relating to the resident. The module acts as a mobile nurse and will advise the care worker when vital sign readings are of concern.

We work with our customers to ensure every aspect of their care delivery is managed digitally. We offer a suite of software applications where each module is created with a specific purpose to support CQC compliance and provide evidence for improved care outcomes.

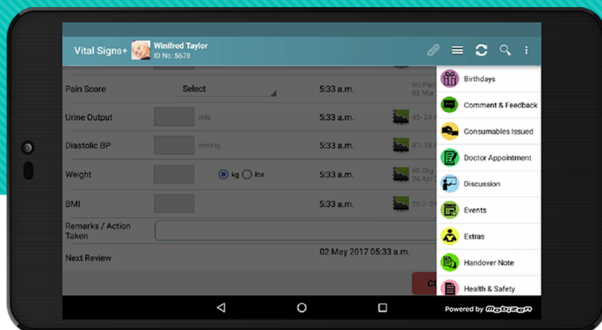

We can take you through a full demonstration of the entire Cura product suite, which engage the entire care community.

- **Cura Tablet** has been designed with care managers and care administrators to provide a full suite of modules that deal with every aspect of care home administration.

- **Cura Mobile Apps, Cura Kin and Cura Angel**, conveniently and securely connect to friends, family and other service providers.

Cura Tablet now available on your mobile phone as well as your tablet device.

The Cura Tablet app equips the care workers with all the information that is required to provide outstanding care, including:

• **Overview of their daily tasks**

• **Access the residents care plans and events planner**

• **How-do-I – breakdowns for each care task in either video, audio or document.**

• **Handover notes – from other care workers**

• **To-do lists – sent from the care managers using Cura Web.**

• **Interactive discussion**

• **Record health data – be warned when vital sign readings are of concern.**

• **Special reminders – of the residents anniversaries and birthdays.**

• **Residents preferences – the care worker can see the residents likes, dislikes and DNR wishes.**

• **Alerts – if there are any issues with the care delivery, over due tasks or if the resident is of high priority.**

• **Daily report – the care worker can create reports, photos, voice notes from the resident**

• **Talk to type functionality – save time typing and potential errors.**

• **Auto notes – you can pre-fill the regular notes for the care worker to choose from.**

• **Report incidents**

• **Report repair and maintenance work required**

• **Wound management – with interactive body mapping functionality.**

• **Meal planner – the care worker can help the resident choose their meals.**

• **Shower planner – the care worker will know which shower is allocated depending on the resident's needs.**

• **Staff training – including HR elements to support the care worker.**

• **Time and attendance – GPS based to ensure the care is being delivered.**
