# Office Protect
battlecard

Office Protect is an Office 365 add-on designed to increase cyber security. It allows easy implementation of recommended security settings, monitoring and reporting, and provides an extra layer of defense against malicious attacks and unintentional breaches. With a user-friendly interface and easily-digestible automated reports, Office Protect simplifies security management for users with limited time and resources.

Extra security for Office 365
Office Protect allows cloud providers and end-users to deploy best practice security settings across tenants; access security settings that are otherwise difficult to find; and simplify security management for Office 365 with minimal effort

Monitoring & alerts
Office Protect enables quick detection of security issues and vulnerabilities; visibility on suspicious behavior; and customizable alerts for end-users to control how they're notified and what they're notified about

Threat mitigation
Office Protect safeguards Office 365 tenants against security breaches caused by human error and malicious attacks; enables multi-factor authentication (MFA) to protect against threats caused by stolen credentials; and flags suspicious emails using company names & addresses in order to stop potential phishing scams and imposter email

Thorough reporting
Office Protect's user-friendly reporting capabilities include easy-to-read summary dashboards within the program; functionality to export data to .csv or .pdf files; and automated reports so users never miss important alerts or notifications

Office Protect informs users about the following suspicious activities and threats:

- Unusual account deletion
- Admin privilege abuse
- Email data is extracted to external sources
- Users share company data publicly
- Potential CEO or management identity fraud is detected

- Unexpected changes are made to security settings
- Office 365 account credentials have been made public
- Unknown actors access accounts
- New user accounts are created without authorization

Target market

- SMBs with between 1 and 250 seats/users
- SMBs that don't have extra security for Office 365
- SMBs that don't have an IT security specialist
- SMBs that don't want to invest in a complicated security platform or software
- SMBs that aren't bound by strict legal compliance regulations or auditing requirements

End-user pain points

- Concerns about hackers and malicious activity
- Bad password habits
- Not currently using any additional security solutions beyond what's included with Office 365 out-of-the-box
- Concerns about employees sharing private information
- Monitoring user access and activity in order to avoid unauthorized usage and admin abuse

Partner benefits

Easy go-to-market

Office Protect creates opportunities for cross-selling with Office 365, and 24/7/365 support from Sherweb experts makes it easy to start reselling

Deliver long-term value

Office Protect helps raise baseline Office 365 security for all clients, and helps increase your stickiness as clients' primary managed service provider

Build a managed security services offer

Office Protect enables resellers to transition from managed service providers (MSPs) to managed security service providers (MSSP) and cultivate new revenue streams within their current client base

End-user benefits

Protect your business from growing threats:
About half of sensitive data stored in the cloud is contained in an Office file (McAfee, 2016), and Microsoft Office products are popular targets for cyber crime given their prevalence throughout the workplace. At the same time, roughly half of security breaches are in some way caused by human error. Office Protect integrates with Office 365 to prevent security incidents caused by malicious attacks, human error and insider threats by automatically deploying best practice security settings across Office 365 tenants, monitoring suspicious activity and generating automated alerts and reports to keep users informed.

Know what's happening in the workplace:
Office Protect gives users visibility over how employees are using and sharing sensitive data stored in Office 365. Additionally, users can review vulnerabilities, security incidents and flagged threats in order to take preventative or corrective action.

Prevent data exfiltration:
Office Protect blocks unauthorized transfers of sensitive information from your organization, whether by an external attacker or inside actor, malicious or otherwise. This stops data breaches from happening, keeps customer data protected and helps your business maintain compliance with data privacy and protection rules and regulations.

Be proactive:
With constant monitoring, user-friendly activity dashboards and automated alerts and reporting, Office Protect users don't have to wonder about what's happening in their environment. Users can address vulnerabilities before they're exploited, therefore adopting a proactive approach to Office 365 security.

FAQs

Does Office Protect replace Microsoft Office 365's security features, tools and products?
No, Office Protect doesn't replace security features, tools and products provided by Microsoft. Instead, Office Protect raises the baseline security of Office 365, making certain security functions easier to find and put in place, making the overall productivity suite more secure.

Does Office Protect interfere with Microsoft's security tools and products or other third-party security products?
No! Built for MSPs and SMB clients, Office Protect is an easy security management add-on for Office 365. It uses best practice security settings including live monitoring and reporting, and does not interact or interfere with additional security measures that users may have implemented.

Can I still use Office Protect if I didn't buy Office 365 tenants from Sherweb?
Yes! Office Protect queries your tenant and tells Sherweb's billing platform how many licenses were found assigned to users. It then bills you accordingly.

Is there a limit to how many tenants I can manage with Office Protect?
No! Office Protect can deploy best practice security settings across all of your Office 365 tenants as soon as you get started.

How Office Protect enhances security for Office 365

	With Office Protect	Without Office Protect
Easy management & time-saving	Get a template of best practice security settings that can be applied across tenants immediately Modify specific settings for all tenants in two clicks, saving up to 15 minutes per tenant Alerts are pre-configured and ready to run	Security settings must be applied to each new tenant manually Settings cannot be applied to all tenants (new or otherwise) simultaneously Alerts must be set up manually for all security settings
Visibility	Live monitoring and alerts, 24/7/365 User-friendly dashboards and reports to easily digest incidents and potential threats	No alerts are configured by default Advanced knowledge of Microsoft audit logs is required to set up alerts
Increase baseline security	Best practice security settings are deployed automatically Address flagged threats with a single click	Extra security settings must be configured manually to enable No central location for addressing security threats
