# ATEA AZURE ARC DESIGN

Connecting land- and cloudscape

What is Azure Arc?

Azure Arc is the bridge that extends the Azure platform to manage and govern infrastructure and applications across on-premises, multi-cloud, and edge environments. It allows you to use Azure management services to manage resources consistently, regardless of where they are located.

Get started the right way with Atea Azure Arc Design

Our comprehensive package includes every step necessary for a seamless implementation of Azure Arc. From planning and training to implementation and operations. Crafted by our top-tier Azure architects with extensive Azure Arc expertise, this offer ensures that your organization is well-equipped to manage and optimize its hybrid cloud environment.

Three reasons why

Expertise

Our Azure architects has extensive experience and deep knowledge of Azure and Azure Arc.

Comprehensive approach

From initial planning to ongoing operations, we cover all aspects of Azure Arc implementation.

Enhanced security

Leverage advanced security features to protect your hybrid environment.

Planning — **Training** — **Azure Arc Enabled Servers** — **Implement services and training** — **Operations**

Atea Azure Arc Design
This is how it works

Planning

Together, we define the target vision and what we aim to achieve. It is also important for us to clarify your expectations.

In this phase we also set dates for workshops and training. We will also choose which services and servers that will be the first connected to Azure Arc.

Training

We will enhance the skills of your IT-related staff during an "Azure Arc Fundamentals" session. Furthermore, there will be hands-on knowledge transfer during the implementation of the chosen services.

The goal is to provide the right skill level for you to maintain the Azure Arc implementation.

Azure Arc Enabled Servers

We will enable the servers in Azure Arc together. Your IT-related staff will get the practical knowledge how to;

- Install and configure servers
- Integrate existing systems
- Seamless connect and management of resources

Operations

We ensure that your technicians are ready to take over operations and can continue to manage Azure Arc when we close the implementation.

Implement services and training

In Atea Azure Arc Design its recommended to implement the services Azure Update Manager, Defender for Servers and Extended Security Update. Which services you choose to implement depends on your environment, and we are open to discuss this together.

- **Azure Update Manager**
  Automate Azure VM patching, ensuring security compliance and minimizing downtime.

- **Defender for Servers**
  Defender for Servers is a component of Defender for Cloud. Consequently, it safeguards your servers from malware through real-time detection and centralized management, utilizing cloud-based functionality.

- **Extended Security Update**
  Provide critical patches for outdated Windows and SQL Server versions, mitigating security risks during transitions.

Get Started with Atea Azure Arc Design

Contact us today to learn more about how Atea Azure Arc Design can transform your hybrid cloud strategy and drive your digital transformation forward. We will also guide you regarding monthly costs.

Price based on 10-20 servers *
Unit price	6 500 EUR
Discount **	15 %
Total	**5 500 EUR**

* Set up remaining servers for 500 EUR per 10 servers
** Only applies to customers with Atea CSP agreements
