**Reduce support requests resulting from errors and misconfiguration**

**Protect data security and integrity through access control, audit**

**Target a wide range of business-specific migration scenarios and requirements**

**Cloud delivery for a fast start, with no disruption to live services**

# GIVE MICROSOFT TEAMS A VOICE

**VOSS**  
MIGRATE

## Fast and efficient migration of users and telephony services to Microsoft Teams

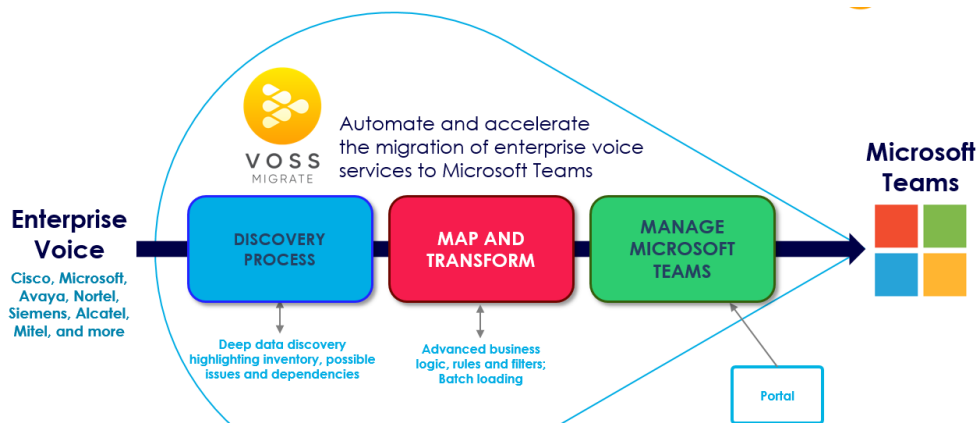

There has been a notable interest in our latest offering, "Give Microsoft Teams a Voice", which has been designed to help large enterprises seamlessly integrate their enterprise voice into Microsoft Teams for a unified digital workplace experience.

The offer comes at a crucial time; with over 270 million active monthly users, Microsoft Teams is the leading platform for collaboration and productivity in the digital workplace market.

But what about the voice element of your digital workplace strategy? Is it fully integrated into the rest of your collaboration suite for a seamless employee experience? Many enterprises are yet to solve this problem; in fact as little as 5 million Microsoft Teams users use the platform for enterprise voice to make calls to external partners, colleagues, and other parties on the Public Telephone Network (PSTN).

The VOSS Give Microsoft Teams a Voice package helps organizations to extend their use of Microsoft Teams to include their telephony strategy. Easy as that!
