

The leading data integration platform to bring all your data sources together.

About Xplenty:

Implement an ETL, ELT or a replication solution using an intuitive graphic interface. Orchestrate and schedule data pipelines utilizing Xplenty's workflow engine. Use our rich expression language to implement complex data preparation functions. Connect and integrate Azure Synapse Analytics, MSSQL, and Azure Blob Storage with a wide set of data repositories and SaaS applications.

WHAT WE OFFER

Code-free Data Pipelines

Build complex data pipelines and transformations with zero coding.

Security Focused

Data transformations allow customers to mask and encrypt their sensitive data before sending to their destination. SOC 2 and FLE provide industry leading security.

Workflows

Quickly and easily create dependencies between multiple data pipelines.

Scalable Solution

Cloud-native offering that scales with high-growth customer needs. Data platforms present in global cloud data centers wherever customers are deployed.

WHAT OUR CUSTOMERS ARE SAYING

"Xplenty gave us the ability not to have data engineers in every team. Instead, data analysts can get the data in the form and shape they want, without worrying about how an ETL process works or the underlying infrastructure."

– Satyam Krishna, Data Engineer, Grofers
