

Introducing OpenLegacy Hub

The all-in-one modernization platform that makes core systems as light as the cloud

The challenge to digital modernization

To compete in a rapidly evolving landscape, enterprises must nimbly compose new digital experiences and offerings. But monolithic legacy systems that weren't designed for the digital age are often a hurdle on the road to continuous innovation.

Enterprises seeking the benefits of cloud native development typically struggle with:

- **Complexity and slow time-to-market** in migrating core applications and data
- **High cost and specialized expertise** required to decouple and expose core architecture for digital innovation
- **Risk of vendor lock-in** in committing to a single language, environment, or deployment strategy

Meet OpenLegacy Hub

OL Hub is built to bring the simplicity, speed, and standardization of cloud native development to enterprises with monolithic core systems.

OL Hub is powered by the same patented API integration technology trusted by hundreds of global banks and insurers to create digital services from legacy systems.

OL Hub enables enterprises to:

- Take a cloud first approach
- Empower their digital teams
- Get results quickly and easily

This allows the enterprise to keep their digital modernization process moving.

initiatives fail

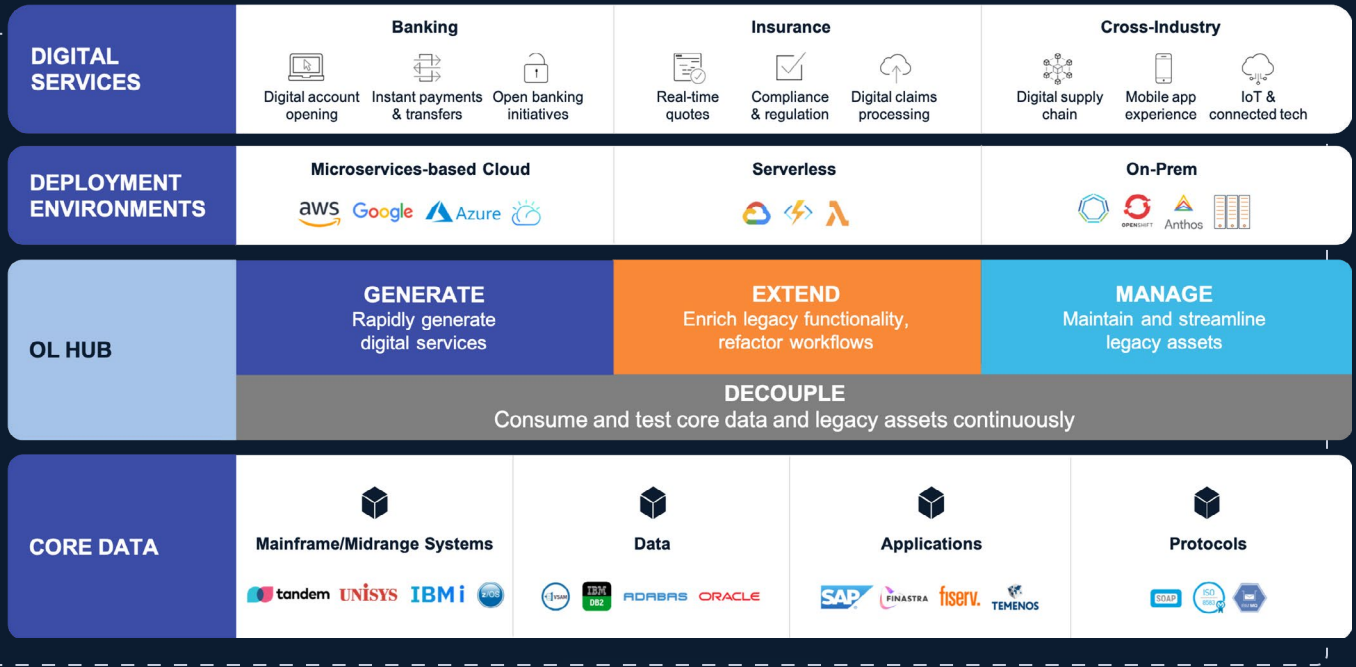

Everest Group

OpenLegacy Hub Benefits at a Glance:

- Quickly fetch legacy assets and create a **digital assets repository** powered by continuous, automated testing
- Accelerate development and time-to-market with **fully reusable “modules,” automated templating, and built-in cloud deployments**
- Flexible digital service creation, ranging from **no-code to full-code development options**
- Avoid cloud and vendor lock-in with **multi-cloud interoperability**
- Future-proof against obsolescence with **language, vendor, and environment-agnostic integration assets**
- Ensure IT governance with **centralized asset management**

Speed for today. Flexibility for tomorrow.

OL Hub is the only solution offering enterprises a true end-to-end “API Factory” for creating digital services from legacy assets instantly and flexibly.

OpenLegacy Hub in Action: Bank Hapoalim

One of Israel's largest banks relies on digital and mobile innovation to maintain its market edge. The bank uses OL Hub to connect directly to its CICS mainframe, creating a "marketplace" of reusable legacy assets that any developer can tap into for rapid digital innovation. By creating a complete and centralized view of all of its core data and assets, the bank has massively standardized and accelerated digital development.

20x

**Reduction in
development time to
build digital services
from legacy systems**

“

OL Hub has fundamentally changed the way we interact with our mainframe. We have harnessed our legacy assets as an engine of innovation. Digital development is now rapid and scalable, and we are prepared for whatever technology change the future brings.

”

Bank Hapoalim**

About OpenLegacy

OpenLegacy is the technology platform that global enterprises rely on to accelerate time-to-market by transforming monolithic core systems into cloud-native building blocks of innovation. It connects directly to virtually any core system, instantly creating microservice-based APIs that power exciting new digital services. OpenLegacy helps industry-leading companies drastically reduce costs and resources while helping them become digital to the core.
