

Dataweavers Platform Operations™ for Sitecore

Enable your Digital Teams to focus on delivering customer experiences that create business value instead of being caught up managing the overhead of infrastructure, applications, security, performance and upgrades.

IT leaders require secure, scalable, and cost-effective cloud infrastructure that enables digital teams and accelerates their speed to market.

- Transformation leaders require the ability to de-risk complex digital programs by enabling change at any time without compromising dependencies.
- Business leaders require the ability to move, respond and innovate quickly to deliver engaging experiences, today.

What is Dataweavers?

- Dataweavers Platform Operations™ automation and governance platform enables complex applications and infrastructure on Azure to be continuously orchestrated, deployed, updated and secured web experience.

Secure by Design

- Proactive Managed Security
- Azure WAF proactive threat detection across whole stack
- RBAC across code, pipelines, application, infrastructure & data

Trusted

- Proven CI/CD Zero-downtime deployments with true High-Availability using Blue/Green Azure DevOps
- Fully automated provisioning
- On-demand elastic scale SLA engineered for high performance

Reduction of >50% in TCO

Complies with InfoSec Standards

99.99% Full Stack Service Level

“

Our Sitecore platform was a major investment, but the platform version was not current and did not enable personalization. We needed to consolidate the management of 50+ brands after a security breach. Dataweavers upgraded us in 2-weeks and delivered a secure customer data platform, site repeatability, and enable multiple agency teams to work on the same brand. We moved to daily releases, and enabled CRM integrations to drive lead capture.

Financial Services Organization

Why customers use Dataweavers:

- To limit unpredictable cloud infrastructure costs
- Concerned about securing PII or customer data.
- No confidence in the performance or availability of application or infrastructure..
- Stuck on an unsupported or old version of the application that's too costly to upgrade.
- Teams scared to make changes because it breaks things or takes forever.

Dataweavers uses Azure PaaS to enable the fastest, most secure and turn-key DXP stack in less than **14 days**.

Proof & Statistics

- >60% faster time to market
- >40% uplift in digital tam productivity
- >50% reduction in total cost of operations

Proof & Statistics of Joint Solution

- Qualitative Proof
- Measurable success or Statistics
- Business Outcome

Cloud Readiness Assessment

Receive a 90-minute Sitecore Health Audit

In 90 minutes, we will provide you with an exact understanding of how healthy your Sitecore stack is and a fixed price to get you onto the latest version of Sitecore, regardless of the complexity of your environment.
