

Backup-as-a-Service to Azure

Creating Resilience For Your Cloud

Business Continuity

Scalability, Lower TCO

Flexible pricing model

Data management in this digital economy is a daunting task, the need to take care of the exponential growth of data created by digital processes, and to ensure these data are protected from external dangers such as hackers or natural disasters. Because of this, many businesses need assistance in creating a data backup plan to ensure their data is secure and easily recoverable.

What is Backup as a Service to Azure (BaaS)?

Fully Managed Cloud Backup Service which is deployed in a dedicated Azure instance. The backup environment and its storage on Azure is solely dedicated to you to ensure your data are kept in its own storage vault. Being fully managed enables business to free-up valuable IT resources to focus on driving business outcome. Stored data on the cloud will allow businesses to scale based on business needs, changing spending patterns where it was traditionally deployed based on a capital expenditure model for on-premise services. This service provides you the capability to safeguard data backup to ensure business continuity in the event of disaster.

Scalability with Manageability

Business Continuity

- Data being stored off-site business can easily access files that facilitate its operations to mitigate downtime

Lower Total Cost of Ownership (TCO)

- Dedicated hardware is no longer required
- Dedicated IT resources to managed backup services is not required

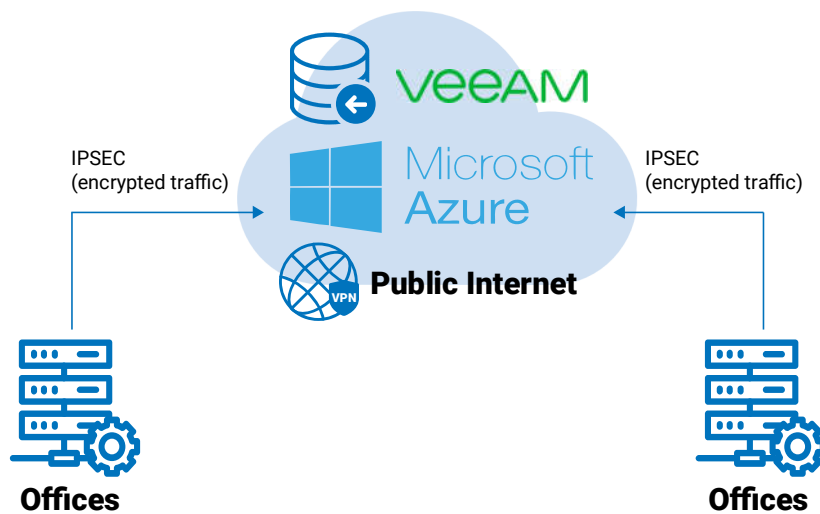

Scalability

- Expand growth easily based on your business needs
- No more physical equipment needed for deployment and maintenance on-site

Flexible price model

- Flexible pricing based on subscription model

How It Works

Scalability

Expand your growth based on your business needs

Flexible Pricing

Pay based on subscription

Features

Data Recovery

Storing data offsite reduces the risk of data loss as compared to storing data onsite

Flexible Backup Schedules

Supports manual or automatic backups based on business needs

Ease of Deployment

Quick to deploy and requires no special training needed

User-Defined Retention Policy

Define your own backup policy and retention period

No More Tape Backups

Reduced human errors for traditional tape backup model

Unlimited Scalability

Modernize and scale your backup requirement

Create resilience for your business.

Modernize and unlock next-generation backup services with ease.

Together we do great things
