

# Workshop:

## How to: From status quo to a data platform

A data platform is the central solution to be ideally positioned for reporting and to have all relevant data in one place. However, the path to a data platform is anything but clear.

### Workshop Agenda:

- ▶ DATA EXPLORATION
- ▶ DATA PLATFORM FUNDAMENTALS
- ▶ DATA PROCESSING
- ▶ DATA INTEGRATION
- ▶ DATA PLATFORM - BEST PRACTICES

Example: Criteria for Data Exploration

### Your Outcome

After one workshop day, you will have a complete blueprint for the path to the data platform, including templates and best practices. All workshop content and results are documented and made available.

7.500€ (up to max. 5 participants)  
12.500€ (up to max. 10 participants)

# Data Landscape Map

## The overview of your data

From stakeholder analysis and user interviews to a complete and visual overview of your data landscape. As a result, you know where your relevant data is located and who is responsible for it.

### Project Agenda:

#### STAKEHOLDER ANALYSIS

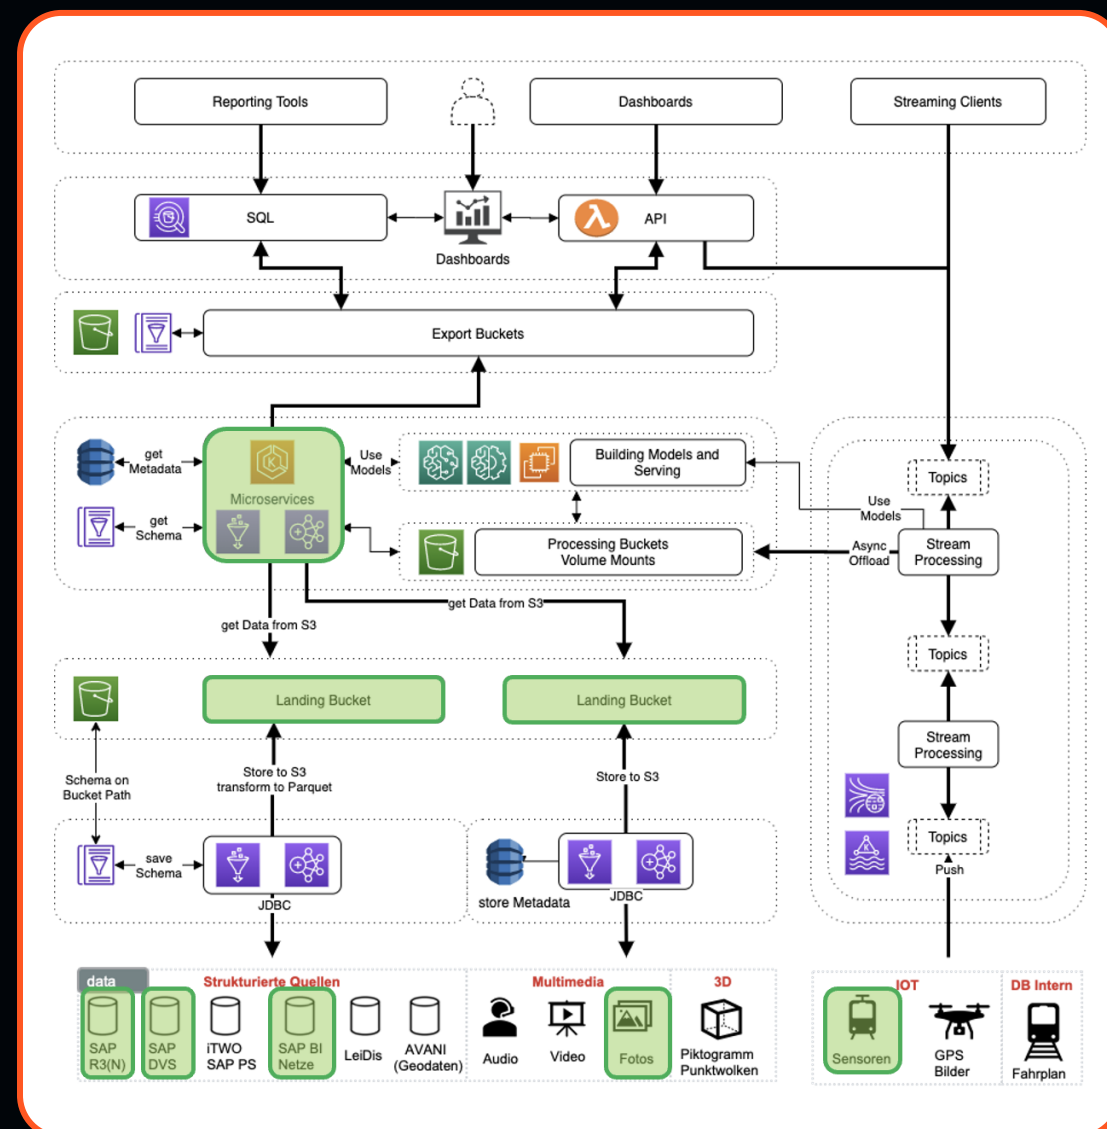

Find the stakeholders who have a (partial) overview of your data landscape.

#### USER INTERVIEWS

Semi-structured interviews are conducted with the identified stakeholders on the basis of our customary established questionnaire.

#### DATA LANDSCAPE MAP EVALUATION

The results of the user interviews are compiled and visualized by our experts, also to reveal processes, redundancies and dependencies.

Example of a Data Landscape Map

25.000€ (up to max. 10 stakeholders)
