# datarails

Transform your Excel into a lean, mean FP&A machine

Datarails is the financial planning and analysis platform that automates data consolidation, reporting and planning, while enabling finance teams to continue using their own Excel spreadsheets and financial models.

The best thing that's happened to finance teams since the invention of Excel

Consolidation

Reporting

Data visualization

Budgeting

Forecasting

Scenario Modeling

Analysis

Bradley McKnight
CFO, FreightWise

"We're growing, so I've got to have the flexibility that the company needs to do that financial planning: What is next month going to look like, or what is next quarter and next year going to look like. I really could not do that very frequently before using Datarails, and now I can."

Access all your data in one place

Datarails integrates with the most popular accounting software, ERPs and CRMs so all your data can be consolidated.
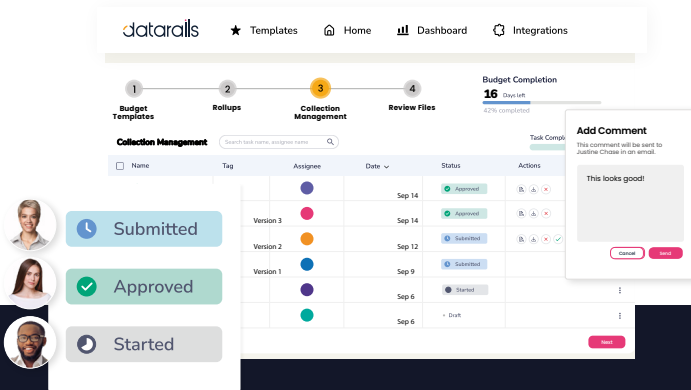

Excel to the power of Datarails

Inspire confidence in your numbers – and your business

Reduce risk, make informed decisions and ensure stakeholders have the most reliable data at their fingertips.

- Use intuitive workflows for **version control** and collaboration across the company
- Improve data integrity and visibility with **comprehensive records** and **audit trail**
- House the **latest version of your data** in one place, with **full control** over how it's structured

The flexibility of Excel.
The power of Datarails.

Automate data consolidation and financial reporting, so you can spend more time analyzing data and less time collecting it.

Let your data tell the story

Show stakeholders the business-critical KPIs at a glance. You know what they say: A dashboard's worth 1,000 rows.

- Drill down to **dig into the underlying data** and answer questions on the spot
- Update your graphs in **real time**, using dashboards or PowerPoint
- Share your insights with a **built-in visualization tool** that's easy to learn, has immediate access to all your data, and integrates with other BI tools
