Lingaro's agile approach [...] in combination with the delivery of disruptive innovations has transformed the way we build Enterprise Business Analytics Solutions [...] and translated into an increased speed of delivery while improving quality and cost at the same time.

Director of BI & Analytics, Fortune 500 company

Data Driven decision-making

Business challenges

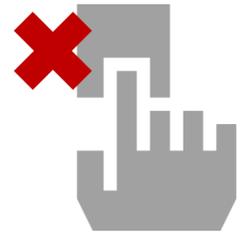

Unlinked data silos

Large amounts of data distributed among different groups and stored in various systems results in long time-to-insight.

Poor awareness of available data

Users often fail to leverage the data at their disposal completely or efficiently.

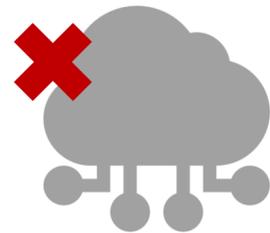

Disparate analytical systems

Lack of data centrally accessible to all employees. Data stored on individual desktops is not available to teams.

Lack of governance

An unstandardized, unautomated, repetitive, and largely manual approach to dataset management results in missing or inconsistent data.

Data volatility

Slow management infrastructure integration of new data sources results in low data usage efficiency.

IT bottleneck

Data efforts driven largely by the IT department do not account for business users' needs and typically result in lags or inefficiencies.

Road to Data Democratization

Access to data for decision-makers

Marketers, analysts, and executives needed data to make business decisions, but they had to obtain that data via the IT department.

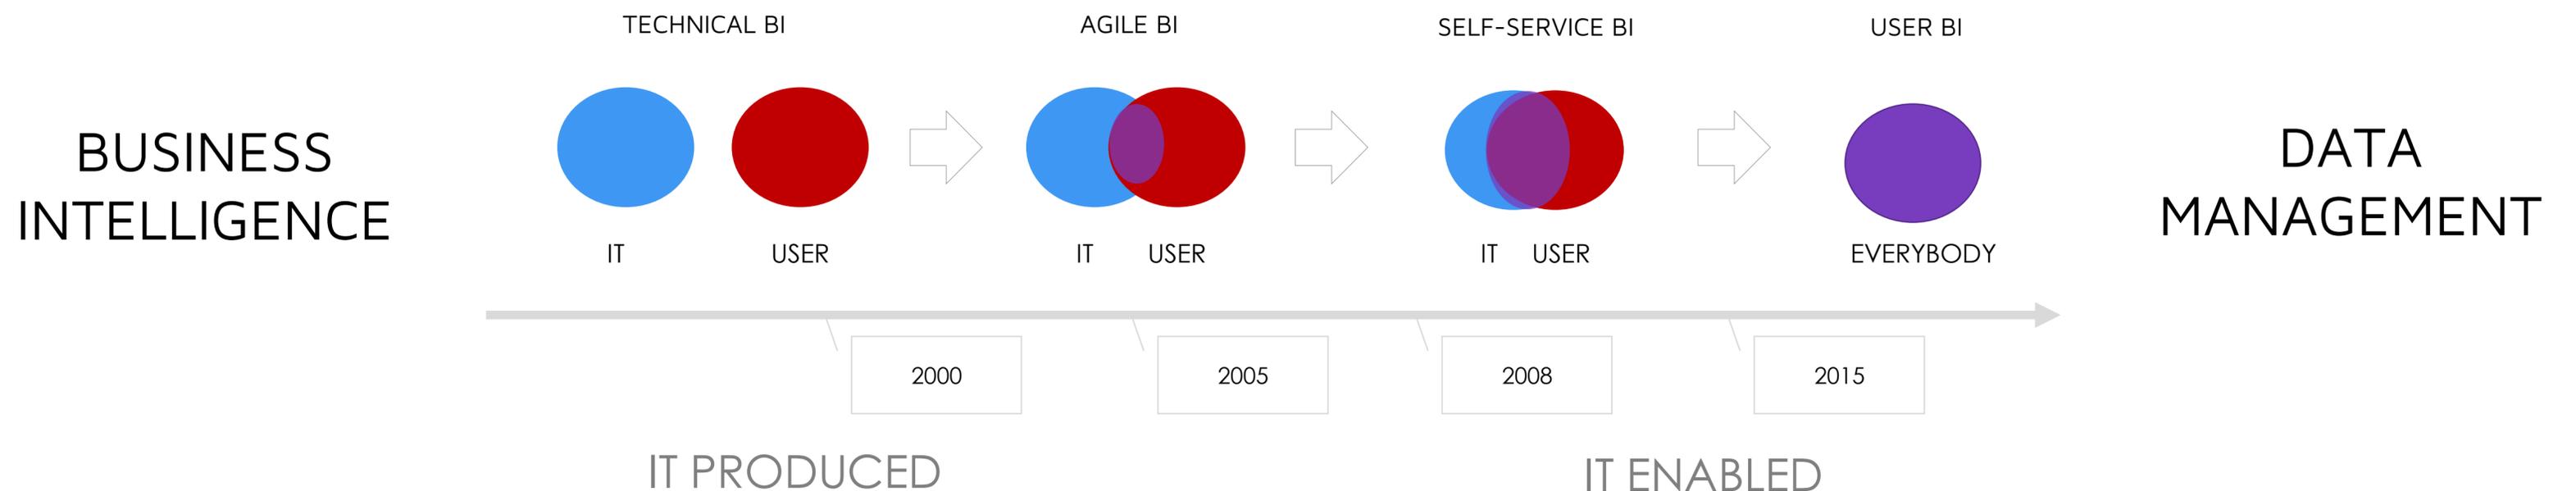

With an Enterprise Data Marketplace, individuals with all levels of ownership and responsibility have access to data to support their decision-making.

By 2020, organizations that offer users access to a curated catalog of internal and external data will realize twice the business value from analytics investments than those that do not.

Gartner

Key executives globally spend 70% of their time finding data and only 30% analyzing it.

IBM

Enterprise Data Marketplace

Holistic approach to Data Democratization

Empowering **business users** with **consumer-like** data management, data discovery and actionable insights

UNLEASH THE DATA

Ensure that data is available to all employees

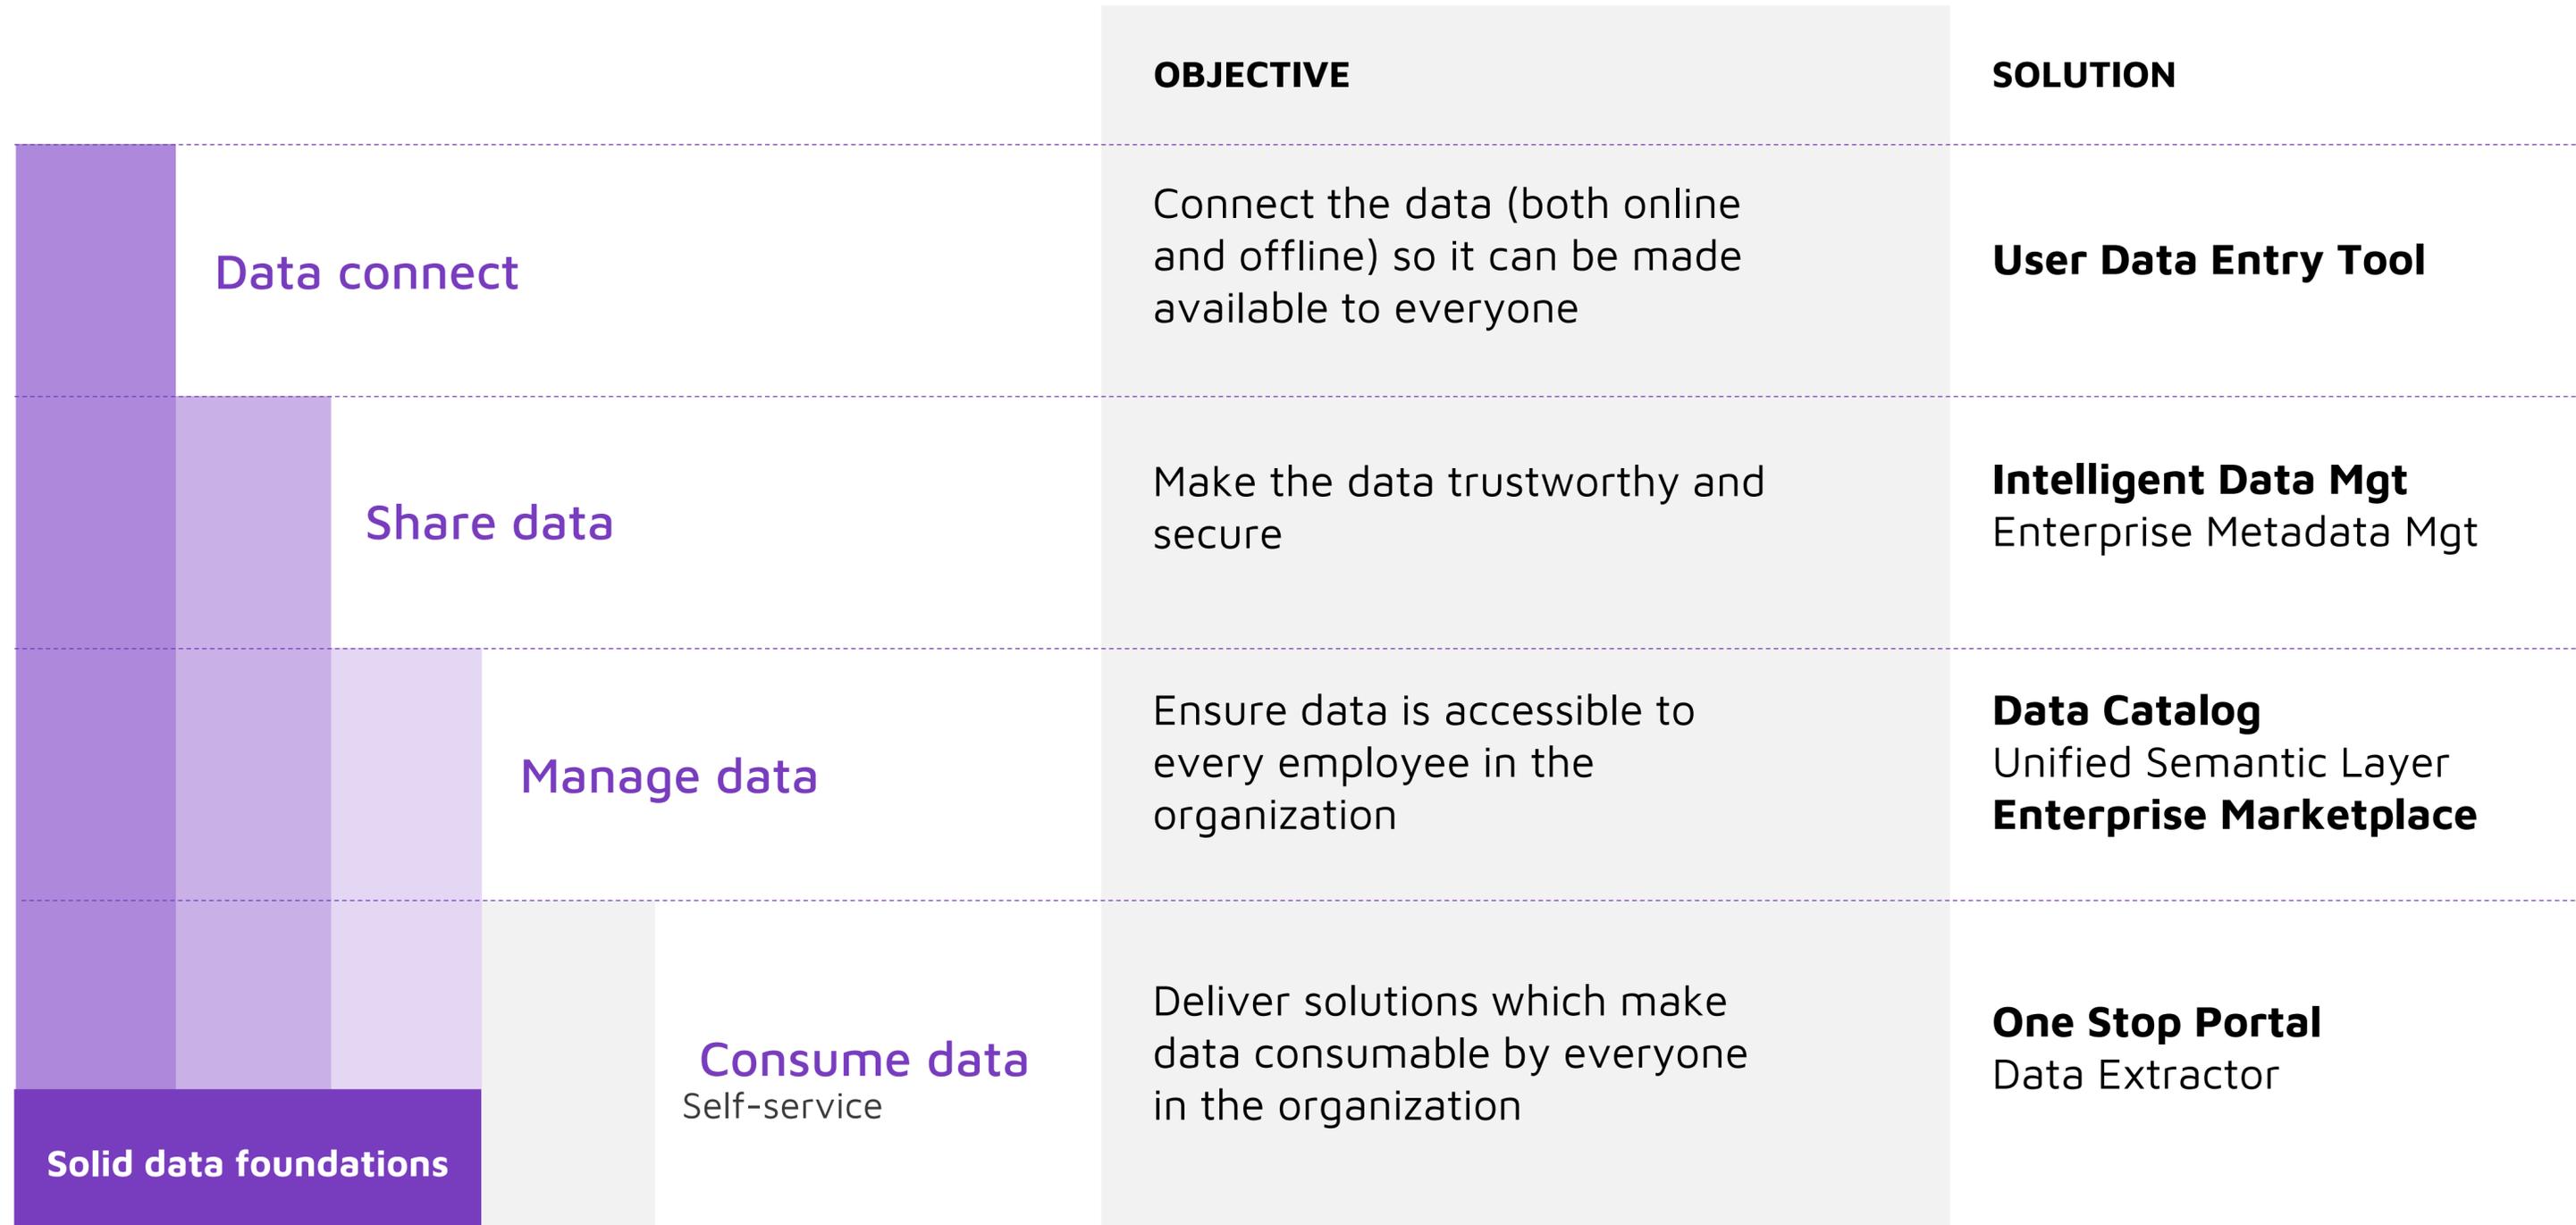

CONSUMER-LIKE CONSUMPTION

Empower everyone to understand and analyze their data

Enterprise Data Marketplace

The Empowered Employee

Solid data foundations

Data connect

Share data

Manage data

Consume data

Self-service

OBJECTIVE

Connect the data (both online and offline) so it can be made available to everyone

Make the data trustworthy and secure

Ensure data is accessible to every employee in the organization

Deliver solutions which make data consumable by everyone in the organization

SOLUTION

User Data Entry Tool

Data Extractor

Enterprise Data Marketplace

Conceptual design

Enterprise Data Marketplace

Foundations to arm teams with data

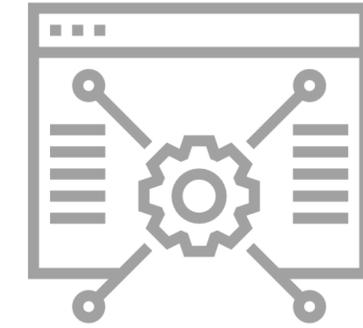

Scalable

The architecture will support the delivery of implementations in different modes from quick Proof of Concepts to solutions which can scale in data complexity and functionality. The architecture should also allow quick transitions from one mode to another.

Fast

The target platform will support the quick ingestion, processing, storage, and consumption of data as well as short development cycles to deliver quick insights. Fast iteration leverages quick feedback to help design and build the right solutions.

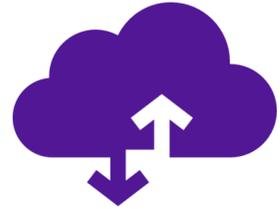

Flexible

The platform supports the possibility to make quick changes in response to user feedback. Changes should be made in a matter of days.

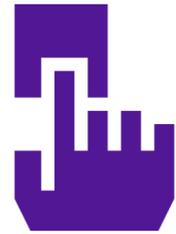

Enterprise Data Marketplace

Business benefits

Cohesion

There are no data silos. Free flow of data and information.

Integration

Business users can access the tools they need to find and work with data with an intuitive one-stop portal. Everyone in the company can become data-literate.

Stability

Easy connection to new data sources allowing quick usage of newly added data.

Visibility

Full visibility on data and data owners across the company thanks to a Data Catalog

Governance

Data governance and security help keep data fresh and consistent.

Democracy

Everyone is responsible for data and decisions around it.

Placing self-service business analytics platforms in the hands of every business user empowers them to make **better decisions and add more value.**

Enterprise Data Marketplace

Success story – CPG industry

Challenge

Data stored in various systems and separately distributed across business silos.
Lack of centralized access to data.
Repetitive, manual data extraction.

Objective

Define and deliver an approach to onboard datasets to the EDM in a way that will allow for **fast, flexible and scalable** implementations, from data ingestion to **analytical consumption in Power BI** or another analytical solution of choice.

Solution

Fast, agile development with changes delivered in 2 to 3 days

Fast data processing supporting **quick availability for reporting**

Scalable architecture that supports the ingestion, processing, storage and reporting of all data types:

- Flat files: csv and excel files
- Data from enterprise sources: ERP
- Data from other database sources
- Small, medium and high-volume data
- Structure and Unstructured

Highly performing frontend solutions in Power BI or other data visualization solution. Interaction with reports can be done in a maximum of 5 seconds.

Enterprise Data Marketplace

Success Story – CPG industry

Benefits

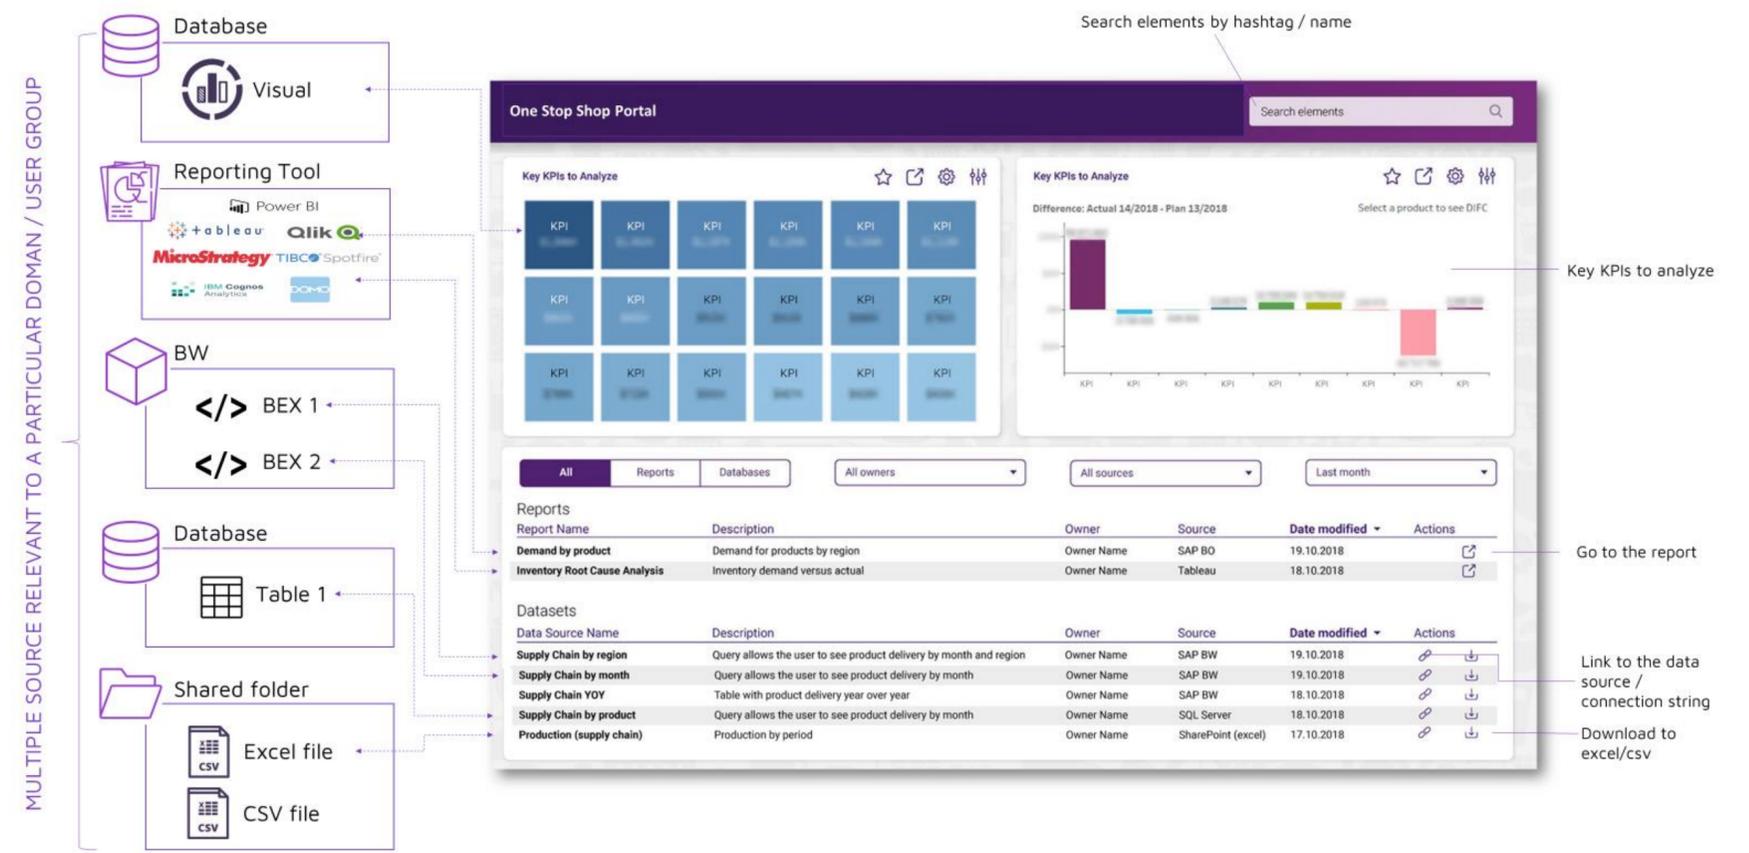

All data stored and accessible in one place.

Easy way to find business data owner.

Fast way to add new excel data sources via Data Connect.

User-friendly analytics platform allowing fast access to necessary insights.

Built-in Q&A module using Natural Language Processing to assess and answer basic questions like “What were my sales for the past quarter?” faster.

Conceptual design

Digitize. Disrupt. Lead.
