

CONDUCTOR™

THE IDEAL MICROSOFT OFFICE 365 COMPANION

AUGMENT OFFICE 365 WITH ITS ULTIMATE COMPANION

Office 365 is a foundational element of many of today's workspaces. Although it covers most of the needs of a modern organization, it's missing key features to truly drive collaboration and work orchestration. Enhance your digital workplace with Conductor, powered by **SenseiOS™**, the ideal Office 365 companion. Conductor augments that foundation and fills in the gaps to create a seamless digital ecosystem for your teams to collaborate and orchestrate their work in real time.

Real-Time Data

Conductor aggregates real-time data, including budgets, benefits, savings, or any other critical KPI, to create dynamic, unified dashboards. By tracking data derived from work performed in the platform, Conductor gives the whole team, from individual contributors to executives, a single version of the truth.

Project Orchestration

Initiative-level templates that codify your team's best practices. With only a few clicks, generate projects and automatically assign tasks for repetitive work freeing your team for more value-adding tasks.

Qualitative Insights

Collect and record the 'gut feel' on project progress from every team member to create a more open, results-driven work culture. Predict roadblocks before they happen rather than checking status reports on issues after they've already derailed the project.

In-Task Collaboration

Conductor acts as a single source of all project information, communication, and files, giving project teams the visibility and trust in the data to move their projects forward with confidence.

FULLY INTEGRATED INTO OFFICE 365

Azure AD

You already use Azure AD for identity management and directory services. Seamless Single-Sign On (SSO) federates Conductor into your work environment and directory sync makes user management quick and easy.

Power BI

Today's teams need fast access to well visualized data. Connect Conductor as a data source in Power BI and easily embed dashboards, reports, and tiles back in Conductor.

SharePoint

Your team is well versed in using SharePoint as a document repository. Leverage that training by connecting Conductor and storing all of your task, project, workstream, and initiative files in your existing SharePoint repository.

Excel

Excel is a perfect tool for inputting, managing, and analyzing large volumes of data. Conductor's Playbooks are stored as Excel documents to enable your whole team to manage them. Import/Export data from Conductor to Excel for easy editing.

Exchange

Shared calendars and out-of-office notifications are critical collaboration components of today's workplaces. Overlay that data in Conductor's timeline view to make sure your team never misses important dates and use out-of-office to ensure tasks are appropriately assigned.

ENHANCE YOUR DIGITAL WORKPLACE WITH THE IDEAL OFFICE 365 COMPANION
