Reduce Your Azure Cloud Expenditure with IA-Cloud

IA-Cloud is an ITSM-integrated full life-cycle management toolset for Microsoft Azure. By combining automated backup, patching, documentation, cost, and performance optimisation into a single platform, IA-Cloud allows you to focus on proactive management instead of business as usual tasks.

432 hours a year saved on documentation	**Up to 30% reduction in cloud spend**	**50 hours saved on backup configuration per 100VMs**

With public cloud consumption expected to grow 47% over the next year, you need a cloud native management toolset that will help you extract the best value out of your cloud platform. IA-Cloud does exactly that by automating the routine tasks and elevating IT staff to be proactive.

Automated Onboarding

The onboarding process into IA-Cloud is zero touch for new resources; no unique tagging or other configuration is needed, saving you effort each time you create new services and resources.

Automated Backup

When resources are onboarded into IA-Cloud, a backup policy is automatically applied, making sure that your data is secure within the public cloud.

Automated Patching

Within IA-Cloud we allow you to define if a virtual machine is production or non production for patching. The patching windows are staggered between production and non-production to allow for testing prior to the production services being patched.

Cost And Performance Optimisation

Traditional cost optimisation tools just look at right sizing of virtual machines. With IA-Cloud we do this as well as right sizing of PaaS services and orphaned resources. This helps to reduce the cost of your public cloud environment even further.

Free Live Demo Environment

To show you the true benefits of IA-Cloud, we've set up a live demo environment which we're providing you with free access to for 15 days. The environment is running in Azure against a fictional company. We will walk you through the solution to show how each area works, and you will also be free to explore at your leisure. Simply fill out the form **through this link** and we'll send you your login details.
