- Built of Teams
- Push & pull data everywhere
- Teams mobile, QR, Geo, Camera, signatures...

Top benefits

- Increase productivity
- Automate and standardise processes
- Save time & money, reduce errors
- Do everything inside Teams

FormMachines is Different

Vs. Business application builders

Such as Microsoft PowerApps, these tools are designed to build generic applications by professional developers. FormMachines is different, anyone can use FormMachines, not just developers

Vs. Quiz, polls & survey builders

Such as Microsoft Forms and Google Forms, the focus is on the quick gathering of very simple data. These are just survey tools. FormMachines is different, we focus on full, enterprise-grade forms

Vs. Online form builders

Some third-party products in this category, built on older web technologies, usually you have to sign up to another website. FormMachines is different, it is built for Teams and runs inside Teams

The screenshot displays the 'Incident Report' form within a Microsoft Teams application. The interface features a dark blue header with a search bar and a sidebar on the left containing navigation icons for Activity, Chat, Teams, Calendar, Calls, Files, and Apps. The main content area is divided into sections: 'Basic info' (blue header), 'Incident Report' (white background with the 'GENERIC COMPANY ABC' logo), 'Incident classification' (radio buttons for Injury and Property damage), 'Incident date' (text input field with '19/09/2023'), 'Manager email' (text input field), 'Notifications' (yellow header), 'Internal notification' (checkbox for 'Incident notified internally'), 'External notification' (checkbox for 'Incident notified to government'), 'Risk assessment' (blue header), and 'Consequence' (radio buttons for Very low, Low, Medium, High, Very high) and 'Probability' (radio buttons for Very rare, Rare, Possible, Likely, Almost certain).

M365
Certified
