

Chorus Product Suite

Solve More Crime

Who We Are

We are a UK organisation that is dedicated to supporting law enforcement with data cleansing and analysis tools and expert training and support. Our team is made up of investigation experts with over 100 years experience in law enforcement.

Many of them have operational experience in intelligence analysis and forensic science that enable us to provide law enforcement with industry leading products and the highest levels of support.

What We Do

We provide software to law enforcement that enables them to cleanse, combine and connect digital data that is used in criminal investigations. Our advanced cleansing engine ensures data integrity so that maps and reports can be used in evidence.

We are used by the majority of police forces and all of the counter terror units in the UK as well as the Home Office and the NCA.

Our goal is:

“To enable efficient and effective policing through the provision of technology.”

Why It Matters

Efficient Policing

By using tools to deliver massive time saving enabling better use of resources.

Effective Policing

By using data analysis to support intelligence-led policing and delivering more positive outcomes for the public.

Solving More Crime

By using technology to answer key investigation questions and open lines of enquiry.

Increased Public Safety

By helping to safeguard vulnerable people and remove offenders from the streets.

Improved Disclosure

By giving officers the tools to gather, interrogate and disclose all data relating to a case.

Increased Guilty Pleas

By enabling investigation teams to build stronger cases in shorter time periods, saving the public money and reducing victim stress.

Chorus Analyser

Industry leading data cleansing and analysis for law enforcement.

Courtroom-ready Reports in Minutes

Chorus Analyser is the sector-leading analytics software from Chorus Intelligence.

It enables you to create courtroom-standard briefing documents from the most complex data in minutes.

By so doing, it helps Analysts work more effectively, highlighting previously hidden connections and opening up new lines of enquiry, putting actionable intelligence in the hands of Investigators *fast*.

Analyse all your data

Chorus Analyser has the ability to ingest all forms of digital data. From communications and ANPR data, to RF survey data and handset downloads, Chorus Analyser can cleanse and format them all.

Chorus Analyser also has the ability to overlay each data type in one customisable dashboard to help you spot links and find out what happened around the time of an offence.

Chorus Analyser does three things and it does them brilliantly:

Data Cleansing

Chorus Analyser can cleanse up to 10 million rows of data quickly and efficiently. The single application handles *all* data, for example:

- Call data
- Handset downloads
- Financial records
- ANPR data
- RF survey data

Connection Detection

Chorus Analyser can uncover links *within* and *between* cases. Using a simple desktop tool, it enables Analysts to view the output data as:

- Heat maps
- Survey maps
- Cluster maps
- Network diagrams
- Geo maps

Report Generation

Chorus Analyser enables Analysts to produce reports in minutes rather than days.

- Courtroom-ready reports
- Actionable intelligence
- Full and robust audit trail

It saves costs by eliminating time spent cleansing and formatting.

Chorus Investigator

Answer key investigation questions and generate lines of enquiry, *fast*.

Immediate Insights

A dashboard for Investigators to instantly see the who, what, where, and when of a case at the push of a button.

Chorus Investigator is designed to help Investigators review the information available to them at a high level to help answer key questions and develop lines of enquiry, *fast*. We understand that time is critical in the early stages of an investigation, so Chorus Investigator is the latest edition to our industry leading data cleansing and analytics portfolio to help law enforcement in their fight against crime.

Disclosure

With the amount of digital data involved in investigations increasing, full disclosure of data is paramount. Chorus Investigator has the ability to ingest and search all of the data involved in your investigation and also provide you with a report that allows you to see entities in order, who they are attributed to and where that attribution came from. All at the click of a button.

Chorus Investigator has lots of easy to use functionality that helps to answer key investigation questions.

Filters

Filters enable you to quickly select the data you want to see before visualising. Filter by:

- Date and time
- Individuals
- Phone numbers
- Locations

Reports

A number of easy to read reports will display on the dashboard identifying:

- Top locations
- Most popular contacts
- Call frequency
- Activity of individuals

Mapping

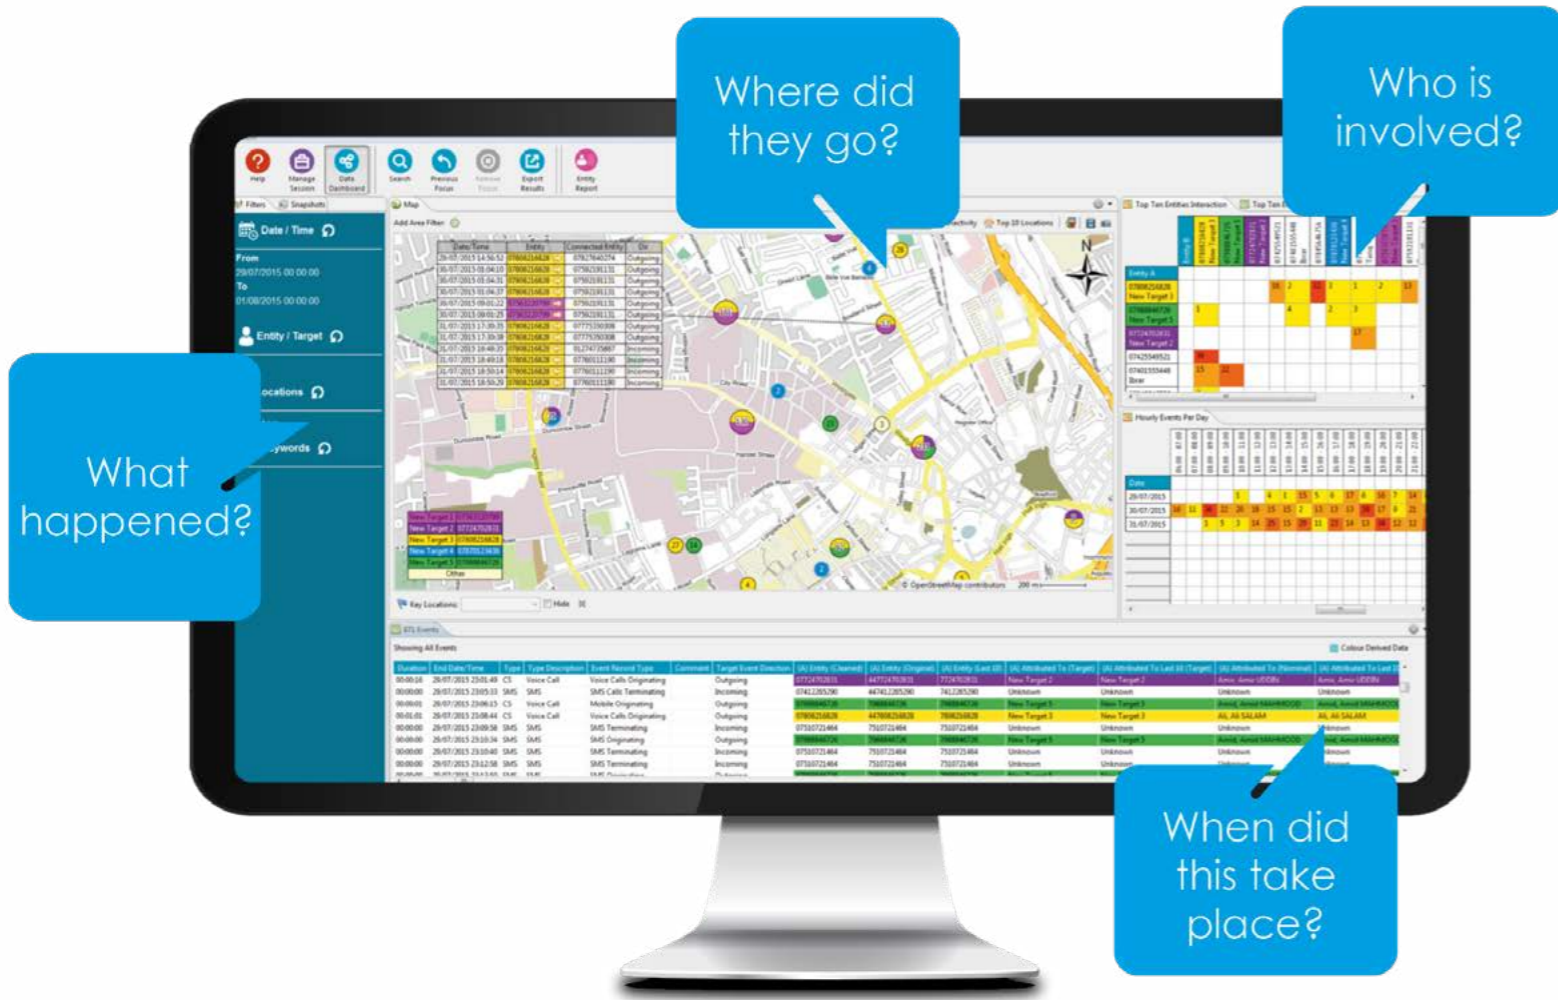

Instantly see what happened around the time of an offence using the integrated mapping.

- Area filter
- Colour coding
- Editable labels
- Snapshot exports

Investigator map exports can be used evidentially.

Chorus Investigator Benefits

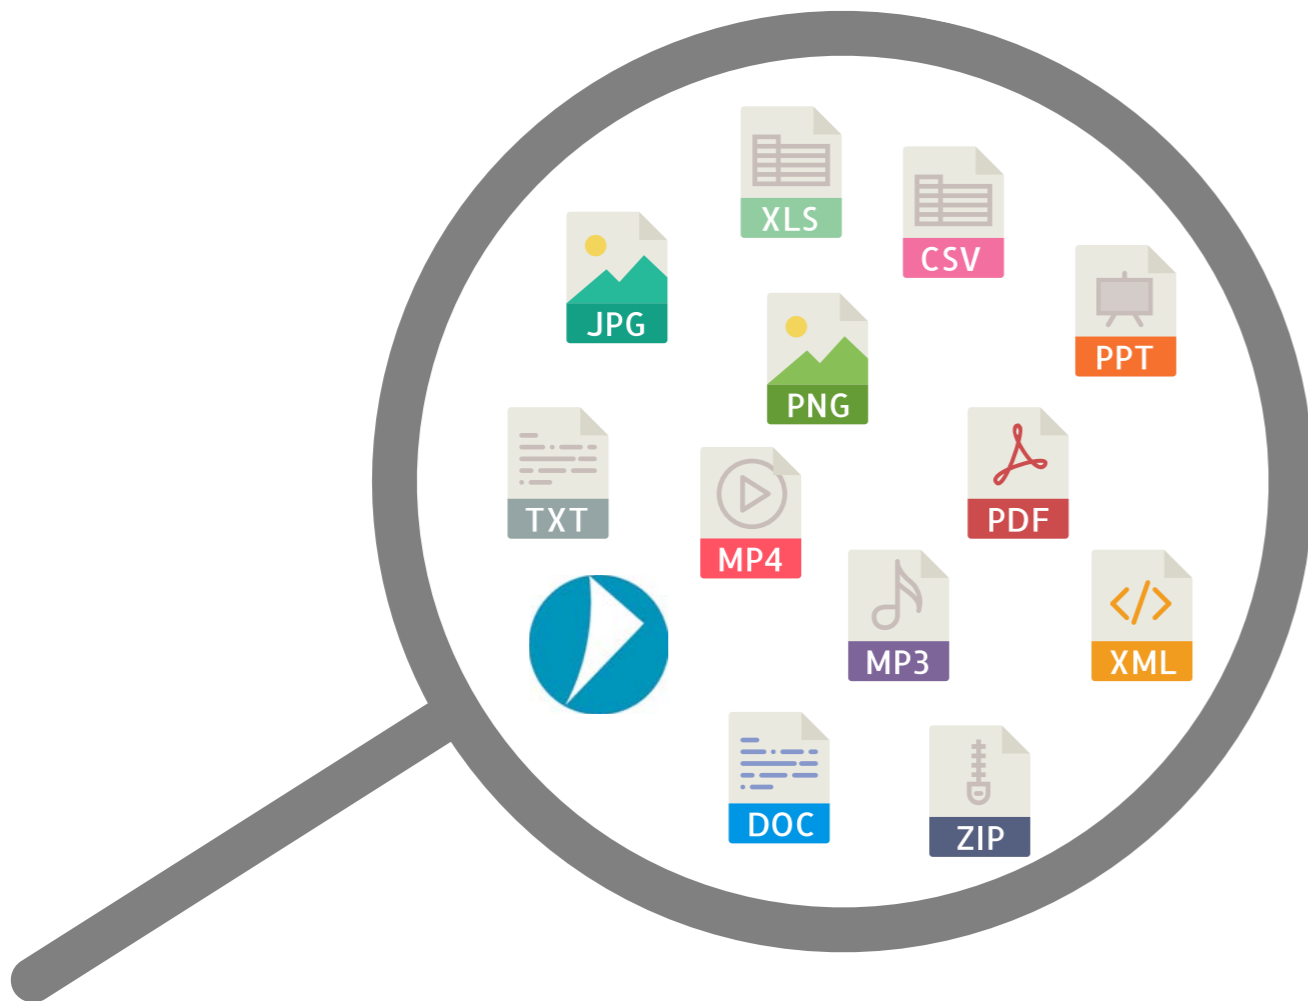

- **Cleansed Data** - Chorus Investigator cleanses your data using rules developed alongside police Analysts meaning outputs can be used evidentially.
- **Ease of Use** - An intuitive interface and drag and drop functionality means data is easy to load and analyse.
- **Time Saving** - We have seen time saving up to 97% in the formatting and analysis of data to get answers. Crucial in a lot of cases.
- **Lines of Enquiry** - Connections can be highlighted and lines of enquiry opened that manual analysis wouldn't uncover.

Chorus Indexer

Search any file type in any location.

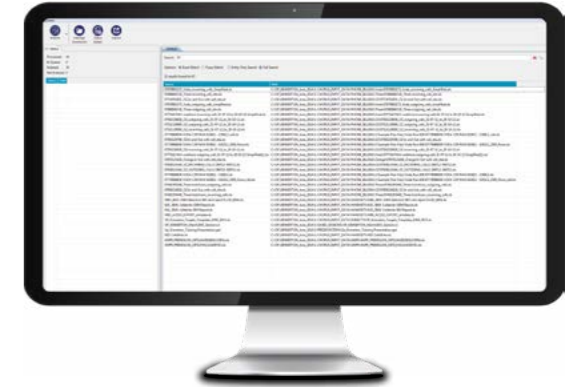

Unlock Intelligence

An advanced searching tool that can find any entity, keyword or key phrase within mass historical or operational data sets.

Chorus Indexer is part of our award winning software suite designed for SPoCs and investigation teams to share and scan data to find out if a phone number, IMEI, name, keyword or other entity has appeared in a previous or ongoing investigation. Simply point Chorus Indexer at your chosen file directory and it will find the needle in your haystack of data.

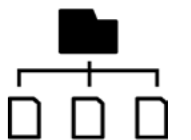

Instant Results

Chorus Indexer fits logically into your existing workflow and enables you to conduct searches from over 100,000 files and get results instantly. Chorus Indexer supports any file format from PDFs and CSVs to Jpegs and MP4s.

Gather all the data files that you wish to analyse and simply point Chorus Indexer at the file or directory location.

The data will be indexed, ordered, and stored locally to enable faster results.

Select what term or entity you would like to search for, such as phone number, IMEI, Facebook ID, keyword or key phrase.

Chorus Indexer brings back results where that term either appears in the file name, content, or metadata. An audit facility records what has been searched for and when.

Choose to open the file, navigate to its location or drop it straight into Chorus for it to be cleansed and analysed.

Make any changes to your original directory or file and Chorus Indexer automatically picks up on those changes ready for your next search.

Training Courses

Chorus offer a range of accredited training courses to help you understand and analyse different types of data that can be used as intelligence in criminal investigations.

Our team are all experienced and qualified trainers and our Head of Training has written and delivered numerous courses for the College of Policing in England and Wales.

All of our courses have been accredited under the **Continuous Professional Development (CPD)** Standards to ensure that practical and academic qualifications do not become out-dated and Analysts and Investigators continue to up-skill themselves.

We have a number of training centres across the country, including London, Liverpool and Stratford-upon-Avon, as well as our head office in Woodbridge. Courses can be delivered at any of these locations as well as onsite at your force.

Our Courses

We offer a wide range of courses listed below across the intelligence spectrum but can also offer bespoke courses according to the needs of our customers.

Contact us at training@chorusintel.com to book training or learn more about bespoke courses.

Intelligence Analyst Training

Practically demonstrate the analysis of differing forms of data.

Introduction to Communications Data

A comprehensive overview of communications data from acquisition to use.

Effective Analysis of Communications Data

Understand and interpret communications data in an operational context.

Anonymity, the Deep Web and Cybercrime

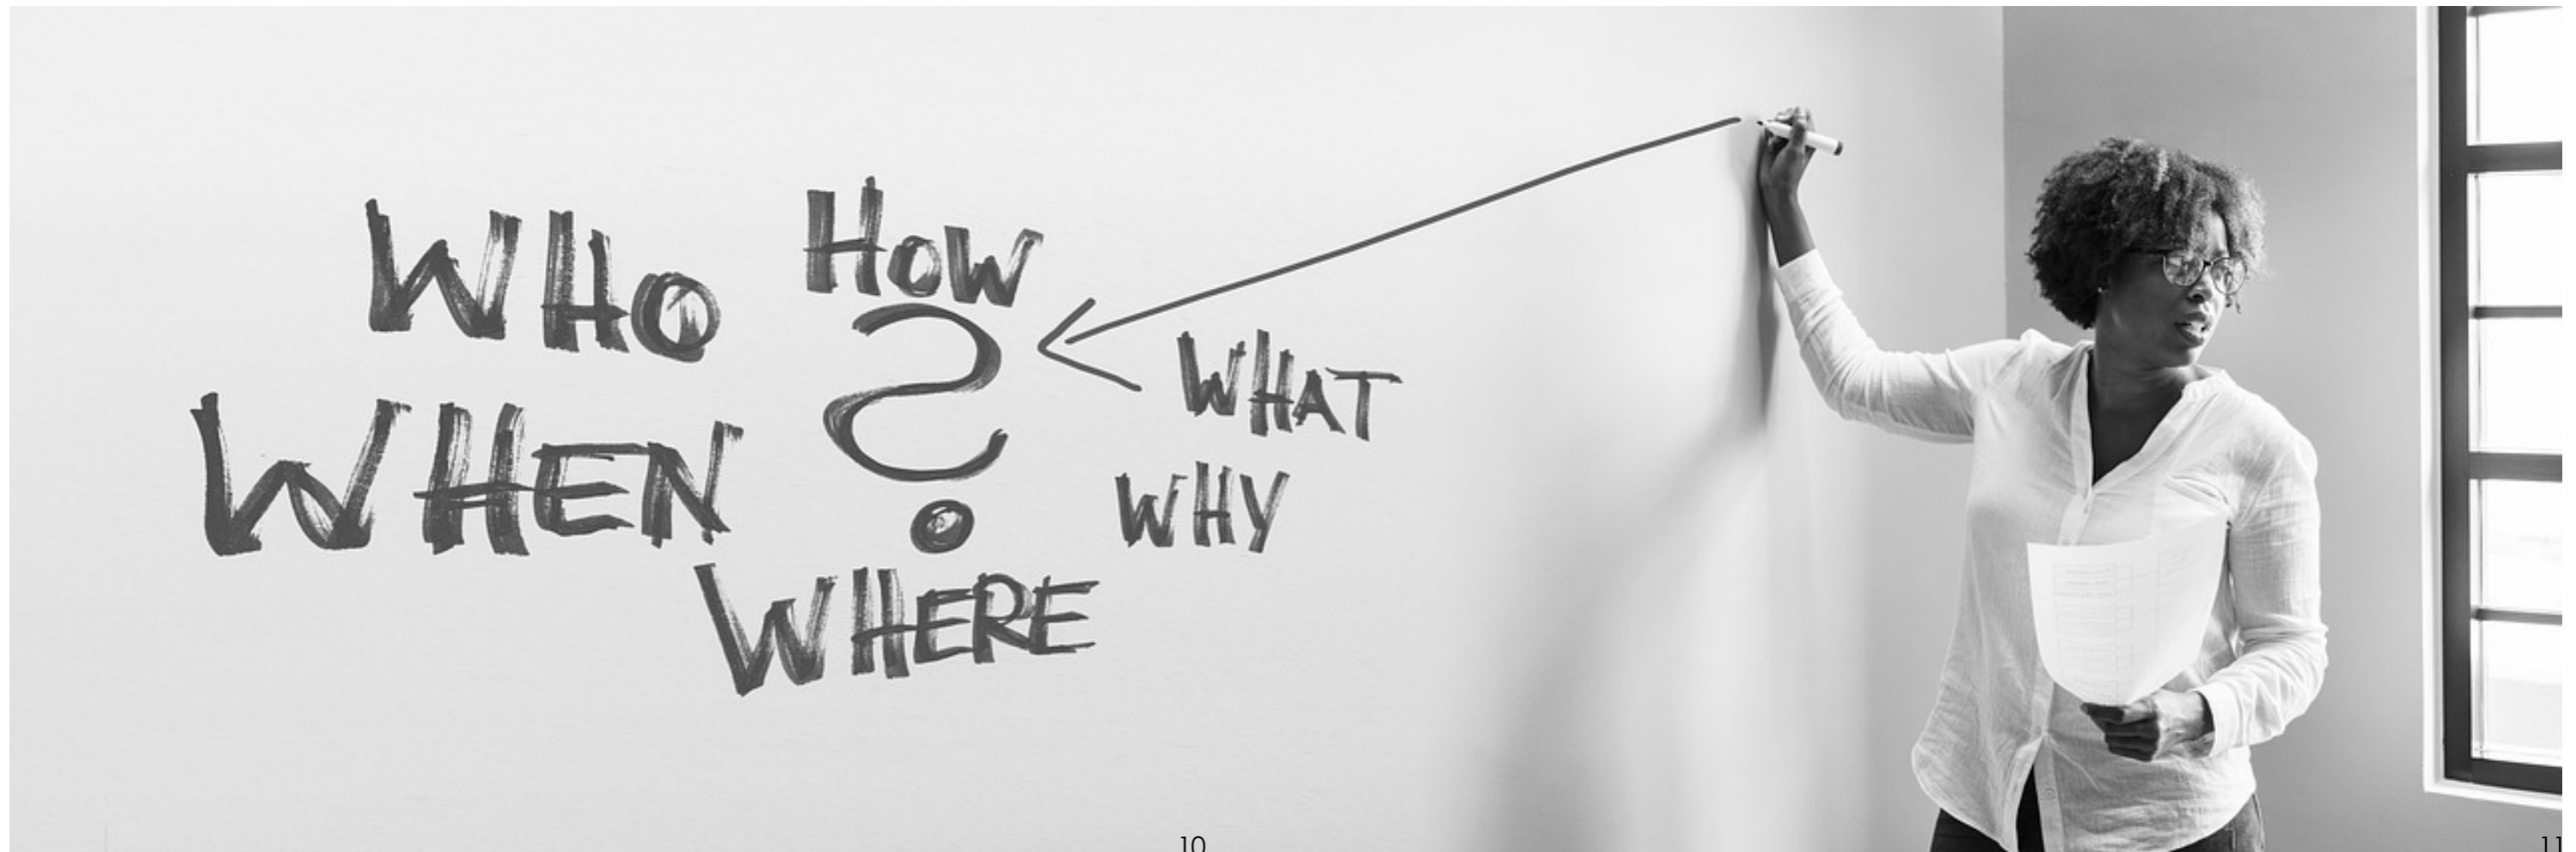

Insight into different levels of anonymity and how the deep web is structured and used.

Open Source Research and Investigation

Enabling effective capture of evidence and intelligence provision.

Microsoft Excel to Enhance Analytical Support

Exploiting the capabilities of Excel for use in an operational environment.
