

APPSPACE FOR MICROSOFT TEAMS

The first workplace experience app built for Microsoft Teams

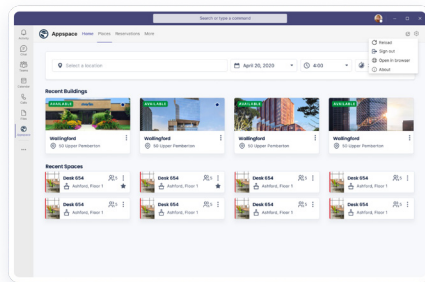

The entire digital workplace — right in Microsoft Teams

Appspace for Microsoft Teams enhances communication and productivity whether you're in the office, at home, or on the go. Embedded right in the Microsoft Teams desktop or mobile app, Appspace centralizes access to communications and workplace management tools to support the flow of work. This means employees can access corporate communications, reserve shared spaces, manage visitors, and much more without ever leaving Teams.

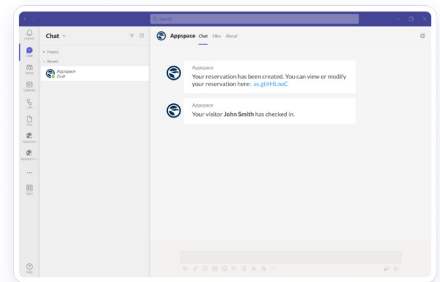

Workplace Communications

Publish and view all company news in a single feed in Appspace. Individual content can also be sent to desired Teams Channels for an omni-channel approach to your comms or to target specific teams.

Workplace Management

Unify your physical and digital workplace with the ability to reserve a workspace or meeting room, invite guests to the office, and locate colleagues and points of interest using Appspace for Microsoft Teams.

Appspace Bot

Get Appspace workplace notifications from the Appspace Bot in Teams. These notifications include things like resource check-in reminders, visitor arrivals, and visitor checkpoint completion.
