## the who?

**Making the road to Smart & Connected Factories simple**

**Founded in 2013 and based out of Bangalore with teams located in Delhi, Pune & Chennai**

**20 years of manufacturing domain experience + 25 years of IT Product experience**

**Full stack solution tailored for Automotive Industry with seamless integration of hardware & software**

# our journey

150 Factories across the country

4500+ Machines connected

15000+ unique Part Numbers

2.4 Million Quality checks carried out

575 Million operations monitored

1.8 Billion data points analysed

CNC Machining, Pressure Die Casting, Stamping & Fabrication, Forging, Plastic & Rubber Moulding, Assembly & Testing

SHRIRAM PISTONS & RINGS LTD.

ENDURANCE

# APPROACH

## Think7 Architecture

## Traditional Architecture based on Industry 3.0 technology

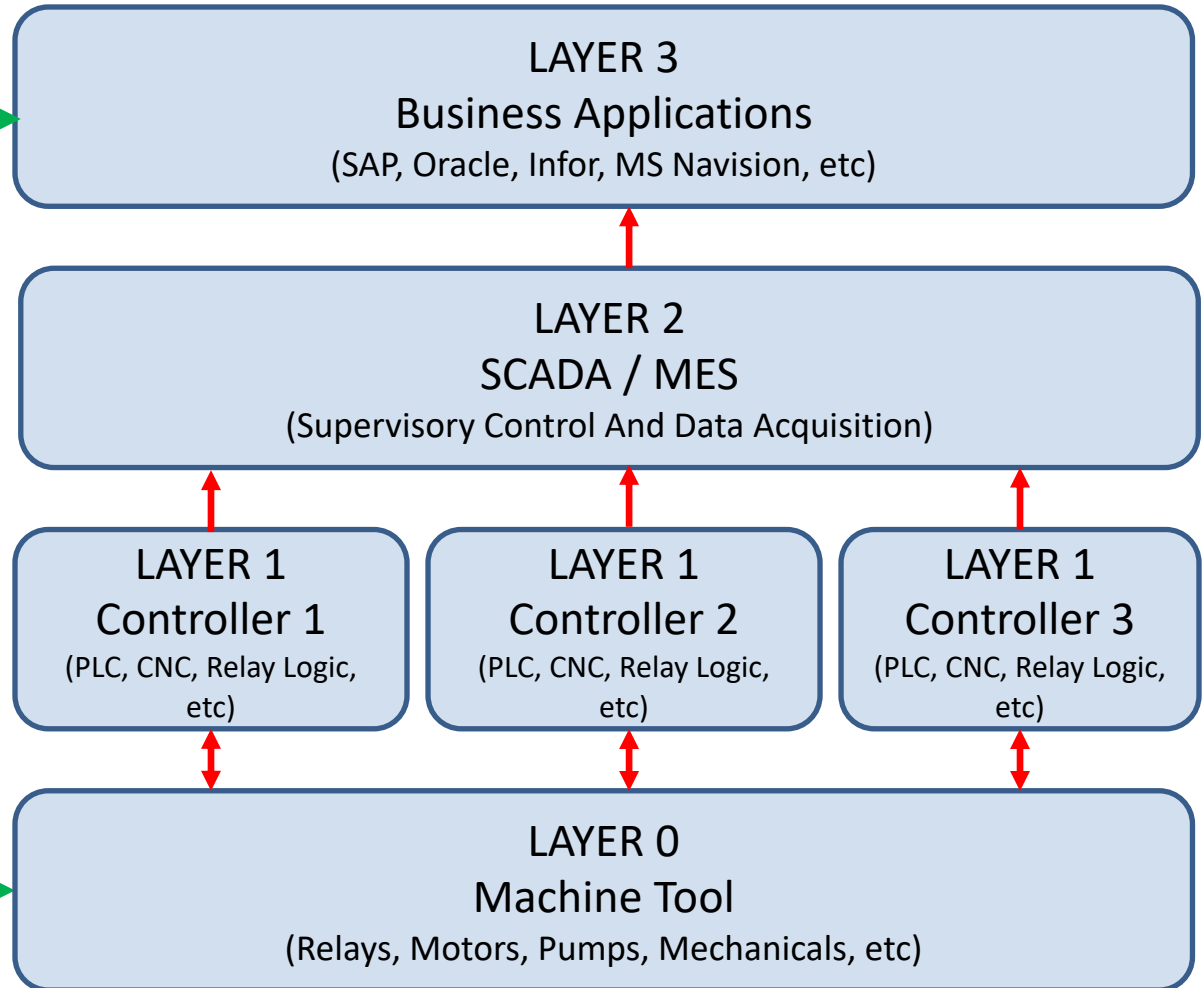

Think7 FMS Server

T7 Proprietary Protocol

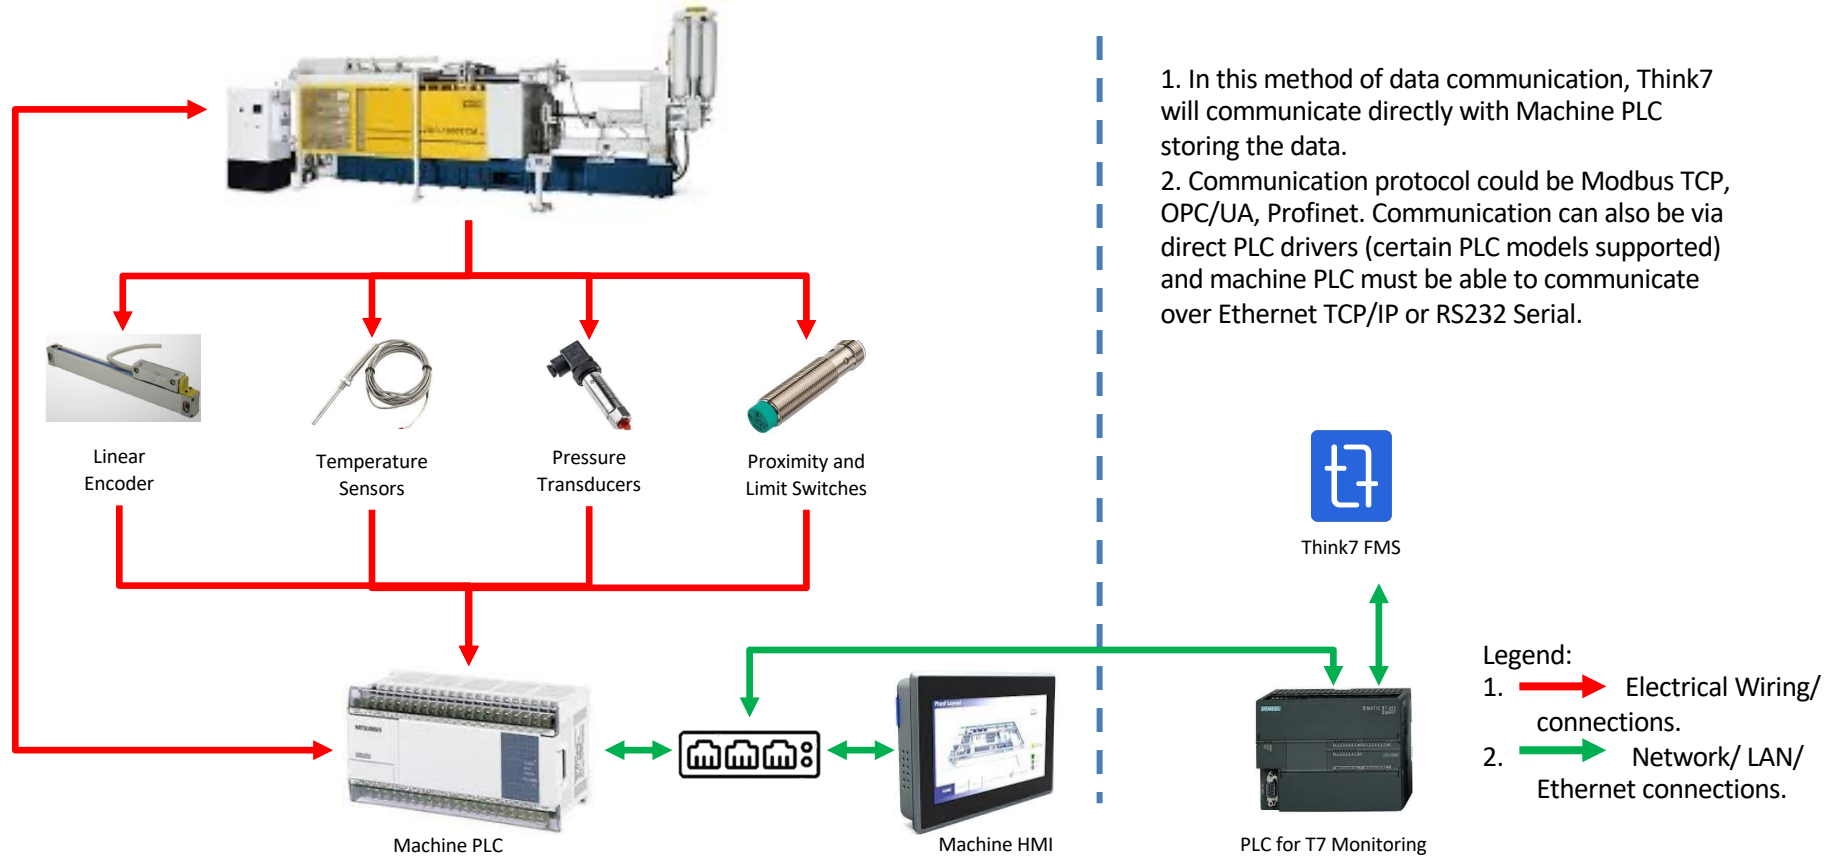

Digital (24V DC), Analog (0-10V DC or 4-20mA), MQTT, OPC/UA, MODBUS TCP, MODBUS RTU

# APPROACH

## Process Parameter PLC Logic

### Machine PLC to Think7 PLC

# FEATURES

Advanced Document Management

Online Process Control based on pre-defined rules

Real-time Production and Quality Monitoring

Compatibility with all types of machines

Instant SMS and Email Alerts and Notifications

OEE, Advanced Analytics and Insights

Predictive & Preventive Maintenance

Remote Asset Monitoring & Control

Product Traceability

# »» BENEFITS

think7.in

- Real-time Visibility
- OEE & Capacity Utilization
- Downtime Analysis
- Production & Productivity
- Quality Management
- Predictive Quality
- Condition Based Monitoring
- Maintenance
- Energy Monitoring
- End-to-End traceability

# USE CASE 1

## GLOBAL MANUFACTURER OF AXLES, DRIVESHAFTS & DRIVE TRAIN PRODUCTS

### Challenge

- End to end traceability
- Prevent Part Mixup
- Monitor & Control Quality

### Solution

- RFID & Barcode integration for product identification and traceability
- Multi gauging integration with auto tool-offset compensation
- SAP integration for picking, packing and despatch

Achieved 100% Production Identification and Traceability for all products moving thru' the factory floor from Incoming material to final despatch out the gate.

# USE CASE 1

Op10  
Laser Marking

2D Matrix/Barcode

After the QR code is scanned by the operator, the same will be displayed here.

After the machine cycle is completed, the QR code will be displayed here.

The readings from the gauge will be displayed here.

# USE CASE 2

## INDIA'S LARGEST ALUMINIUM DIE CASTING PARTS MANUFACTURER

### Challenge

- To get accurate OEE
- To monitor production output in real-time
- Traceability
- Monitor Inventory Levels

### Solution

- Real time production monitoring with Think7 Piston Pro
- Auto Downtime capture
- Integration with SAP Inventory module
- Auto capture of Process Parameters

Achieved 100% visibility for real-time production monitoring resulting in accurate inventory management in SAP.

# USE CASE 2

## Connectivity Options

- Analog & Digital Signals
- MQTT
- OPC/UA
- MODBUS RTU

## High Pressure Die Casting (HPDC)

- Injection Velocity Phase 1 (V1)
- Injection Velocity Phase 2 (V2)
- Biscuit Thickness
- Injection Pressure
- Accumulator Pressure
- Toggle Lubrication
- Plunger Lubrication
- Auto Spray Air Pressure
- Die Coat Pressure
- Metal Temperature
- Oil Temperature
- Die Lock Force
- Auto Mode Interlock
- P-Rise

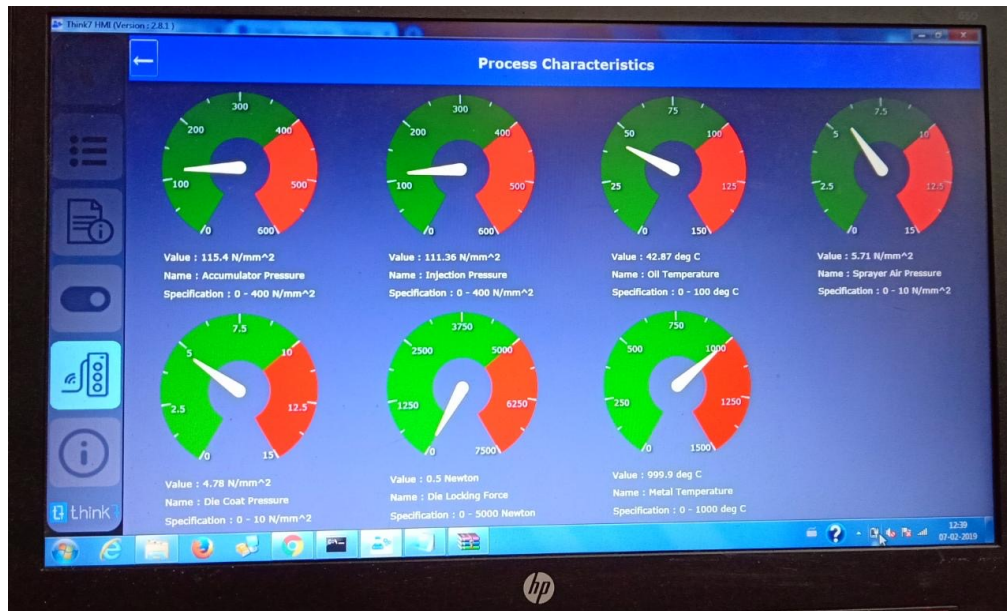

## Low Pressure Die Casting (LPDC)

- Metal Temperature
- Injection Pressure
- Cycle Time

## Gravity Die Casting (GDC)

- Tilting Angle
- Tilting Time
- Solidification Time
- Metal Temperature

# USE CASE 2

# USE CASE 3

## LEADING TURBO CHARGER MANUFACTURER

### Challenge

- Standardisation of documentation and processes
- Digital and Paperless shopfloor
- Track Operator Efficiency

### Solution

- Integrated Think7 QMS & FMS
- Think7 Piston+ connected to 350+ machines to ensure discipline
- RFID based operator authorisation

Achieved 100% system compliance with complete Operator Traceability resulting in increase in OEE by 25%. Currently monitoring 350+ machines across all units. Plans now in place to replicate this success across group companies.

# USE CASE 4

## MANUFACTURER OF CONNECTIVITY AND SENSORS AND ELECTRONIC COMPONENTS

### Challenge

- Prevent over-production on Injection Moulding Machines
- Paperless shop-floor
- Live Production Monitoring

### Solution

- Think7 Piston+ integrated with Injection moulding machines
- Kiosk based task manager
- ANDON for live machine status and production monitoring

Prevented over production to the tune of 6% resulting in additional free capacity. Currently deployed across all moulding machines with plans to horizontally deploy across other manufacturing processes within the organisation.

# USE CASE 5

## LEADING MANUFACTURER OF FASTENERS FOR AUTOMOTIVE INDUSTRY

### Challenge

- Track & Trace
- Reduce In-process Inventory
- Standardise quality documents for thousands of SKUs

### Solution

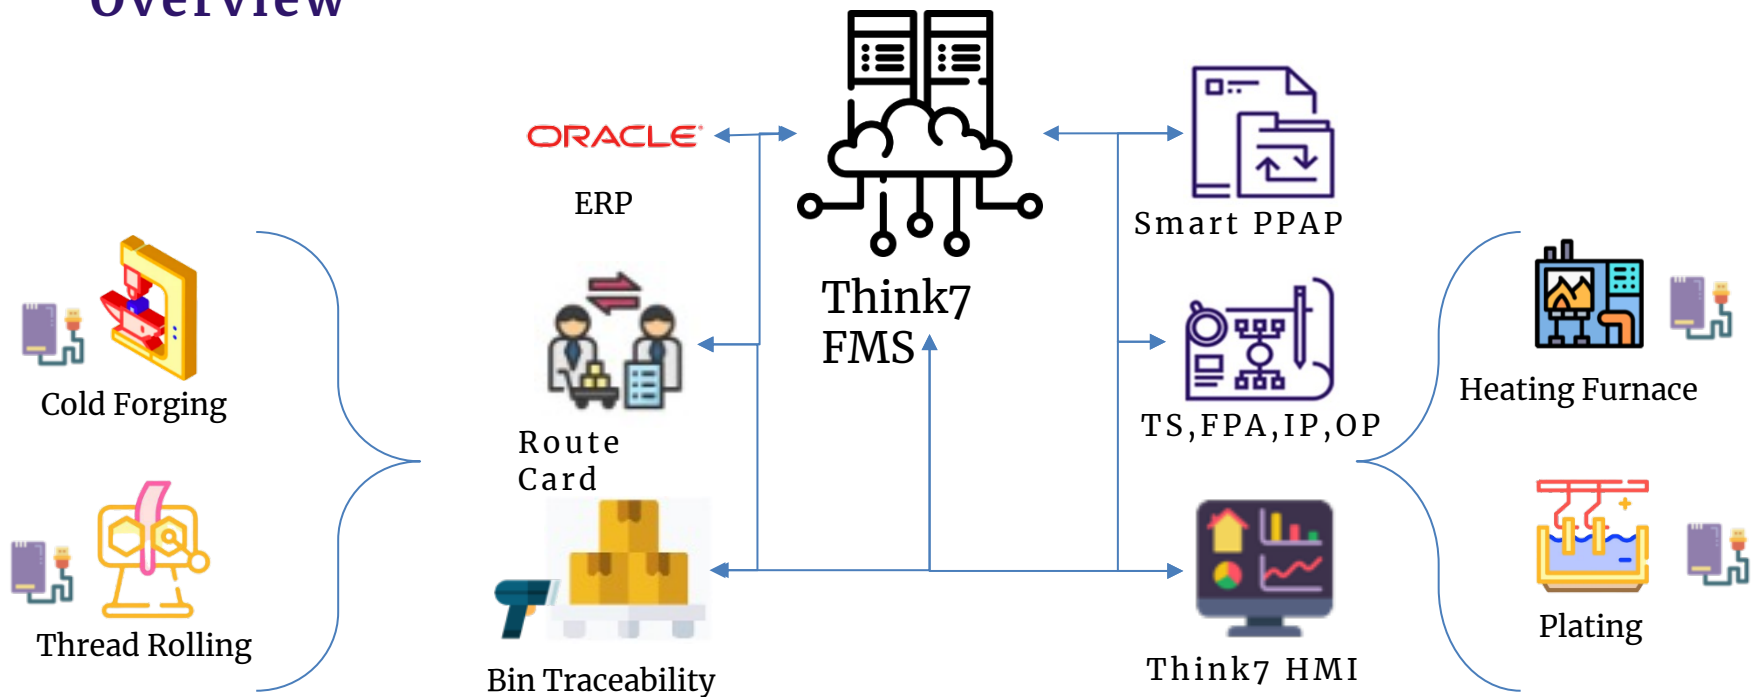

- Live tracking of WIP Inventory at every stage
- Production ANDON
- Digital Work Instructions & checksheets with Instrument/Gauge integration
- Batch traceability from RM to FG

# USE CASE 5

# USE CASE 5

## »» Approach & Shopfloor Overview

# USE CASE 6

## LEADING FABRICATOR FOR 2 WHEELERS CHASSIS FRAME

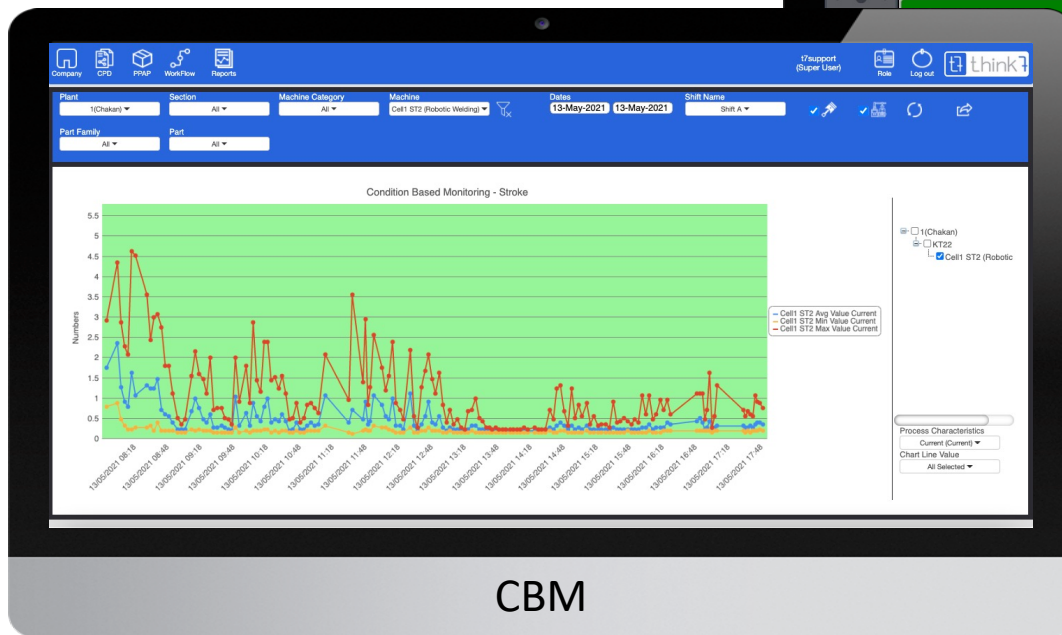

### Challenge

- Production Monitoring
- Monitoring Poka-Yoke
- Monitoring Process Parameters like current, gas flow and voltage
- Jishu-Hosen, 3 Layer Audit, In Process Inspection, Operator Inspection, etc.

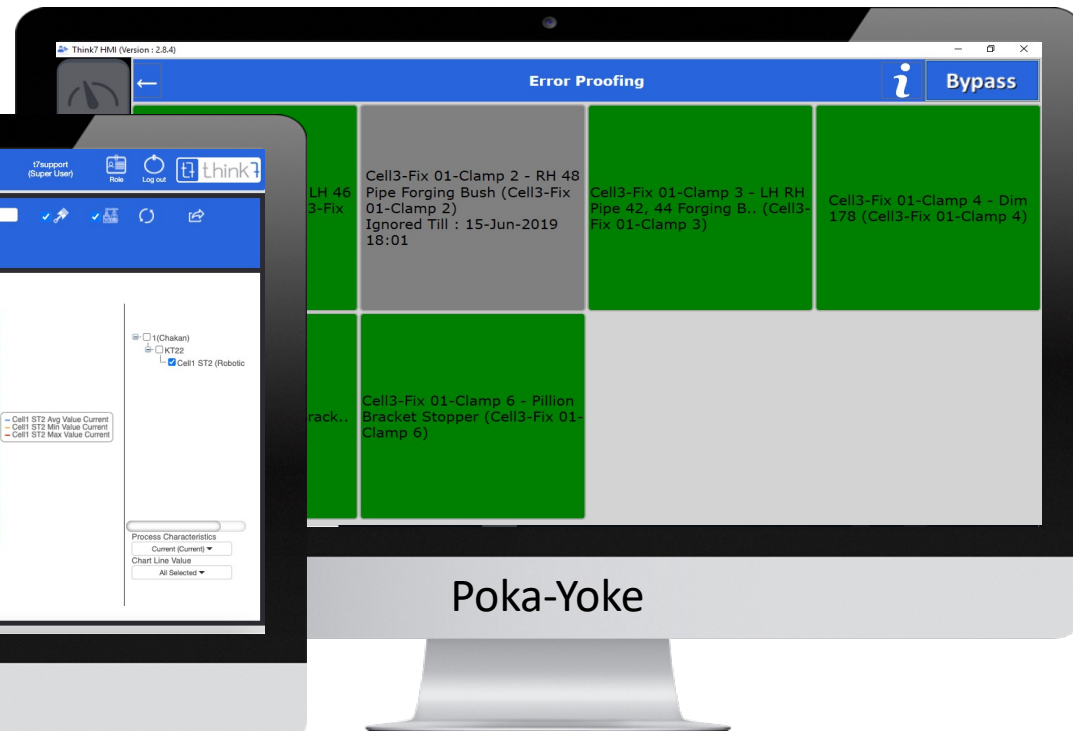

### Solution

- Live tracking of welding process, monitoring process parameters and poka-yoke per cycle basis
- Digital Checksheet for JH, 3LA, IP, OP, etc.
- Process Parameter and Poka-Yoke parameter monitoring per part basis

Process Parameter Monitoring

Operator Efficiency Report

# USE CASE 7

## For an OEM to Track, Trace & Monitor their Vehicle Assembly Line

### Challenge

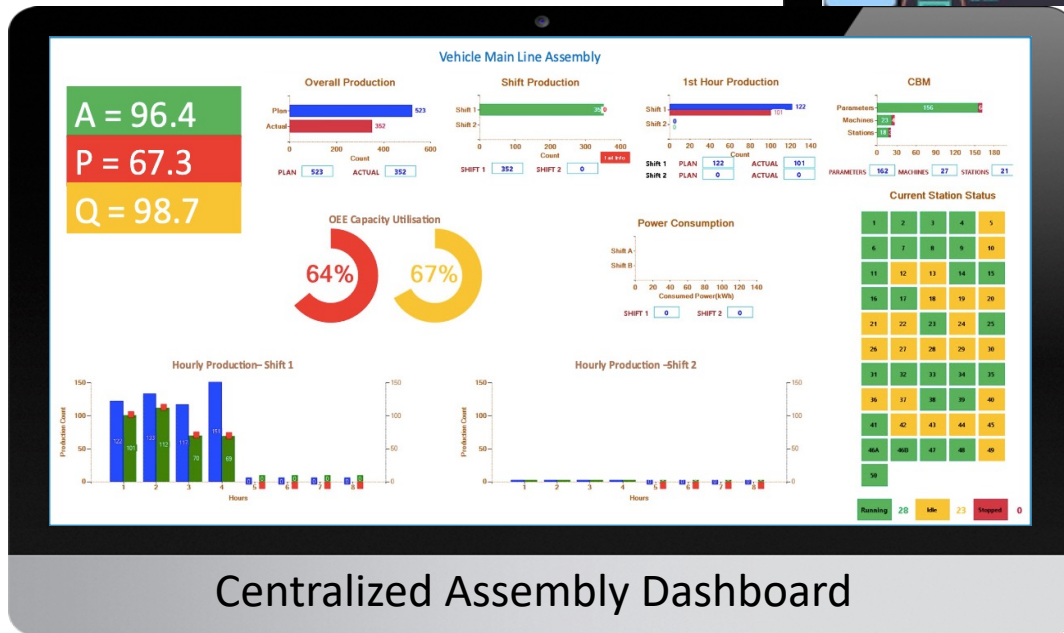

- Capturing of Real-Time Machine & Process Related Datapoints like Parameters (Part), CBM, Gauges & Testing machines data, etc. on the vehicle line
- Jishu-Hosen, 3 Layer Audit, In Process Inspection, Operator Inspection, etc.
- Traceability

### Solution

- Once the barcode is scanned, the data from the machine gets registered to it in Think7
- Escalations in case of discrepancy in the data from the Control Plan data.
- Digitize Checksheets for tasks like Preventive Maintenance, JH, etc.
- Track Assembly of sub-item
