bGrid®

Realizing the world's smartest buildings

BGRID DELIVERS HIGH QUALITY SENSING & REDUCED COMPLEXITY

Thermostats

Presence sensors

Air quality sensors

Light switches

Daylight harvesting sensors

Light management system

Installation and cabling

BGRID® NODE

The bGrid® node is a multi-sensor with light and comfort management.
We measure presence, temperature, CO_2, sound, humidity and light. bGrid® is an open and integrated smart building solution that uses proven technology
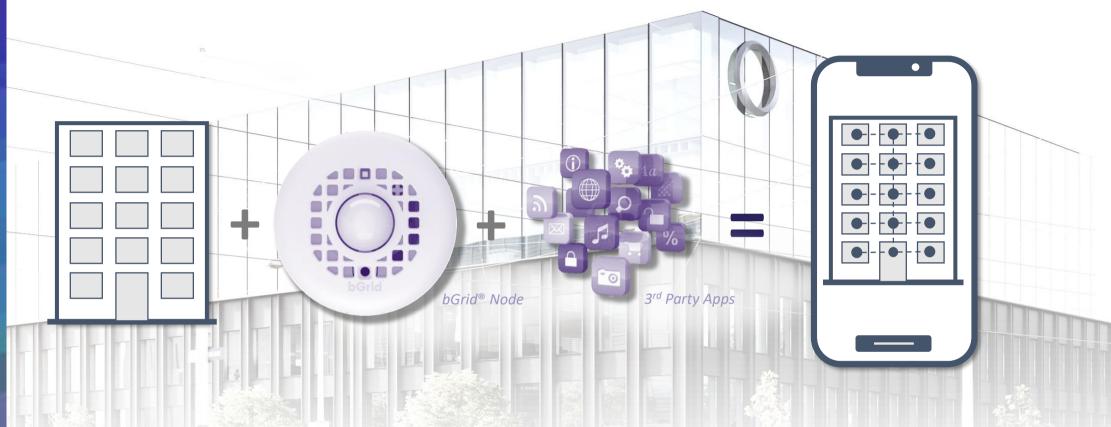

BGRID® REDUCES COMPLEXITY

The bGrid® solution replaces a collection of traditional building systems and components. The result is reduced complexity and risks, reduced labor on-site and open & integrated data

BGRID® LOWERS COSTS

Reduced complexity delivers lower costs, in addition to the reduced risks, improved data quality and data access

SMART BUILDING FOR NO ADDITIONAL INVESTMENT

bGrid® Node

3rd Party Apps

STANDARD BUILDING

Core and shell building

BGRID® DELIVERS SMART BUILDING

The bGrid® solution not only reduces complexity and costs but delivers a full-scale smart building; sensing, control & localization (iBeacon & asset tracking). The powerful open bGrid® API allows the connection with any 3rd party application (currently 20 different partners)

BUILDING AS A SMARTPHONE

The bGrid® solution delivers a 'core and shell' smart building for no additional investment. The building is future proof and built to adapt to tenant requirements. The tenant has full flexibility in selecting apps; *the building as a smart phone*
