- Standard and custom tables and views
- Standard and custom reports
- SAP Queries (SQ01)
- QuickViews (SQVI)
- SAP BW queries (beta)
- Other datasets from virtually any SAP screen

System Requirements:

- SAP basis release 7.00 SP8 or newer for the SAP plugin

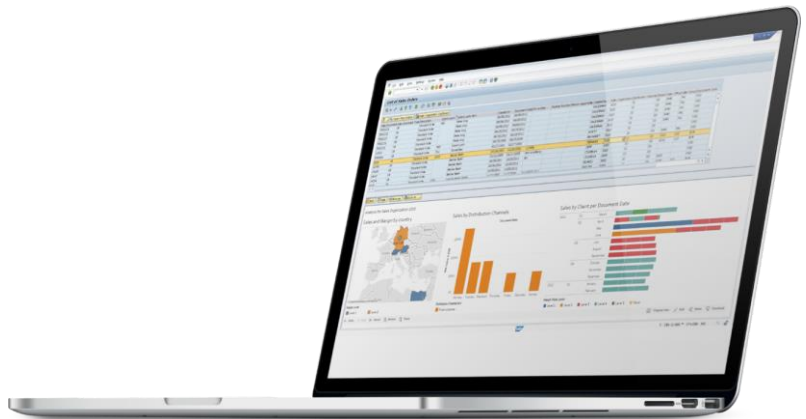

* Only in case of using VirtDB Data Distribution Engine

EMBED TABLEAU DASHBOARDS INTO SAP

VirtDB provides solutions to prepare and push SAP R/3 or S/4HANA data to Tableau Desktop or Server and databases that conforms to SAP licensing policy.

We enable your business users to access operational data faster, at minimal cost without compromising existing data governance

InstantInsights enables context sensitive analytics on ERP to make better business decisions, by embedding Tableau dashboards into SAP GUI.

Business users can visualize non-SAP data within SAP without having to integrate the external systems. If your Tableau Dashboards use data sources from other databases or web services, you can make that available to your SAP users as well.

As SAP started auditing indirect license usage, current SAP integrations should be evaluated and may should be replaced, because could violate licensing policies.

InstantInsights is perfectly compliant with the SAP license agreement and does not involve any indirect access.
