

Gain insight into cyber threats with **< Sekoia Intelligence >**

Illuminate your security landscape and turn raw data into actionable intelligence across your entire ecosystem

Organizations rely on their IT systems to drive their operations, and as a result, the attack surface for cyber threats is expanding. To counter these threats effectively, organizations need a deep understanding of the risks they face, along with tools and tactics used by cybercriminals. This is where Cyber Threat Intelligence (CTI) comes into play.

Sekoia.io is at the forefront of CTI in Europe. Our dedicated team of cybersecurity researchers, known as Threat Detection & Research (TDR), is passionate about producing global cyber threat intelligence, which we deliver through our SaaS platform.

HIGHLIGHTS

Sekoia.io offers **strategic and technical intelligence**, providing insights into active cyber threats and their associated technical indicators, also known as Indicators of Compromise (IoCs).

Based on industry **technical standards**, we produce intelligence in a **one-to-many model** that can be used by any organization in any industry.

The intelligence is designed to be operationalized to enhance **detection capabilities** and provide a high level of threat **context and knowledge**.

KEY FEATURES

01 Integrated intelligence

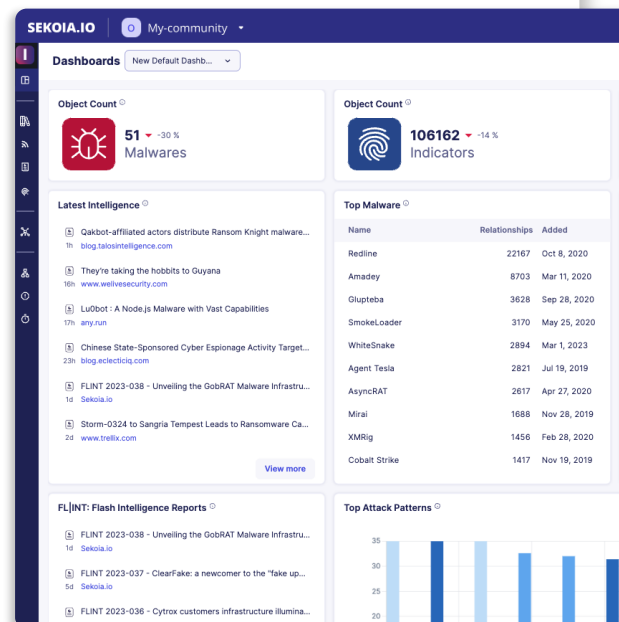

Access intelligence from our TDR teams and third-party sources, with powerful search, filtering, and integration capabilities.

02 Multiple intelligence sources

We aggregate intelligence from proprietary, OSINT, and community sources, systematically linking and contextualizing it using STIX 2.1.

03 Cyber Threat Intelligence feed

Our platform is updated continuously, adding approximately 150,000 new IoCs monthly. It includes over 6 million threat-related objects, interconnected through a million relationships.

04

Intelligence reports

We offer around 4,000 intelligence reports in multiple formats, covering proprietary **Sekoia.io** reports and third-party intelligence.

05

Collection of third-party Intelligence

Consolidate your third-party threat intelligence feeds within **Sekoia SOC Platform** and import your custom IoCs lists for a one-stop intelligence platform.

06

Easy dissemination

Easily distribute intelligence to third-party systems, cloud and on-premises, for enhanced detection and contextualization (SIEM, SOAR, TIP, EDR, Firewall, etc.) thanks to our native integrations, API capabilities, TAXII endpoints and playbook capabilities.

07

Graphical explorations

Visualize threat relationships for effective investigations.

08

Dashboards

Create custom dashboards to monitor trends, key threats, and recent reports.

09

Public REST APIs

Access our microservices APIs for platform configuration.

10

Suggested use cases

Deploy CTI for various use cases to enhance your security posture:

- ▶ IoC dissemination to EDR detection engines
- ▶ On-premises firewall blacklist management
- ▶ Hunting, retro-hunting, and telemetry analysis
- ▶ Incident response contextualization in your SOAR
- ▶ IoC detection in your SIEM

OUR CTI OFFERING

Possibilities offered by Sekoia Intelligence

Access to our CTI database	✓
Set up custom intelligence feeds	✓
Read the threat reports of our analysts	✓
Collect our CTI in your systems	✓
Disseminate IoCs to 3rd parties APIs	✓
Import and use external IoCs	✓
Automate CTI actions for threat hunting	✓
Customize your dashboards	✓

About Sekoia.io

Sekoia.io is a European Cybertech, expert in intelligence-based eXtended Detection and Response solutions. Our **Sekoia SOC platform** provides a unified view and full control of the perimeter to be defended. Our mission is to empower security operations teams with a flexible and easy-to-use platform. We protect more than 150 Fortune 1000 companies, technology scaleups, governments, and Tier One MSSP partners worldwide.
