

# How often do you review denied pharmacy claims?

## **A System to Validate 100% of Your Pharmacy Claims**

Are you hoping that the rejected claims you actually review are a statistically valid sample, even while realizing it only takes one event to catch a CMS auditor's eye?

Stop putting your plan at risk! Let Reveal process 100% of your pharmacy claims and separate the signal from the noise for you. Reveal can quickly and easily show you the claims that you're not rejecting properly related to DUR, BvD, Protected Class, Transition and more.

## **State of the Art**

Reveal is a secure and scalable cloud-based SaaS platform that allows faster, more convenient and more focused access to the pharmacy claims you care about than you've ever had before. Stop filtering through spreadsheets and PBM reports, switching applications with every new piece of information you need. Let Reveal put the information from the claim, formulary and eligibility all at your fingertips for maximum efficiency!

## **Workflow**

Are you paying skilled pharmacists to sift through spreadsheets of claims trying to find a couple needles in that haystack?

Reveal allows you to identify the claims that need your attention, assign them to users, enter notes and track their status from the moment they enter the system until they are resolved.

# Let Reveal find the bad rejections for you!

## Reveal by RevealRx.

Few health plans have the capacity to review all their pharmacy claims. The result is often sampling from spreadsheets, relying on summary reports that don't tell the whole story, or not even reviewing them at all. Reveal solves this by analyzing 100% of your claims and showing you only those claims that put you at risk.

### Real Time Analysis

Too many plans wait for the CMS auditor to show up before realizing they are rejecting pharmacy claims incorrectly. This is an expensive way to learn a lesson! Reveal loads your data daily, so you can see the problems immediately after they occur and take action right away, potentially saving your plan thousands of dollars while improving patient outcomes in the process!

### CMS Best Practices

Get a clear look at how you're handling CMS' best practices. See your performance down to the individual best practice to easily identify which claims put your plan at the greatest risk and take action on them. View your plan's performance over time to identify trends and spikes in the data and identify areas for process improvement.

### Find That Needle!

With more than 30 separate filters, Reveal allows you to zero in on the signal you're looking for while removing the noise. Match rejections to paid claims, find out which transition patients have already received their transition fill and much more!
