

Amplify Inventory Management with Fisica: A Physical Inventory Chatbot on Microsoft Teams

Inventory tracking is a labor-intensive process, requiring continuous chase to manage the bin counts in the warehouse. The resulting mismatch interrupts production, causing inventory levels to rise.

Fisica, a physical inventory ERP chatbot on Microsoft Teams, transforms complex inventory management operations with a one-stop, AI-powered conversational interface. It integrates with your ERP system to bridge the gap between managers, supervisors, and floor personnel, allowing them to interact and track warehouse inventory in real-time.

Key Capabilities

Automate 80% of queries with 24*7 availability. Reduce waiting times from seconds to minutes.

A Tailored Inventory Management Chatbot to Track Warehouses in Real-Time

Fisica is a customized physical inventory chatbot on Microsoft Teams developed to eliminate the tedious job of tracking warehouses. The AI-powered virtual assistant integrates with ERP systems to manage bin counts in a warehouse and brings managers, supervisors, and store staff together to plan a bin count using a conversational interface. Furthermore, the digital agent holds the capability to generate necessary reports post the bin count is finished at the picker's/store staff's end.

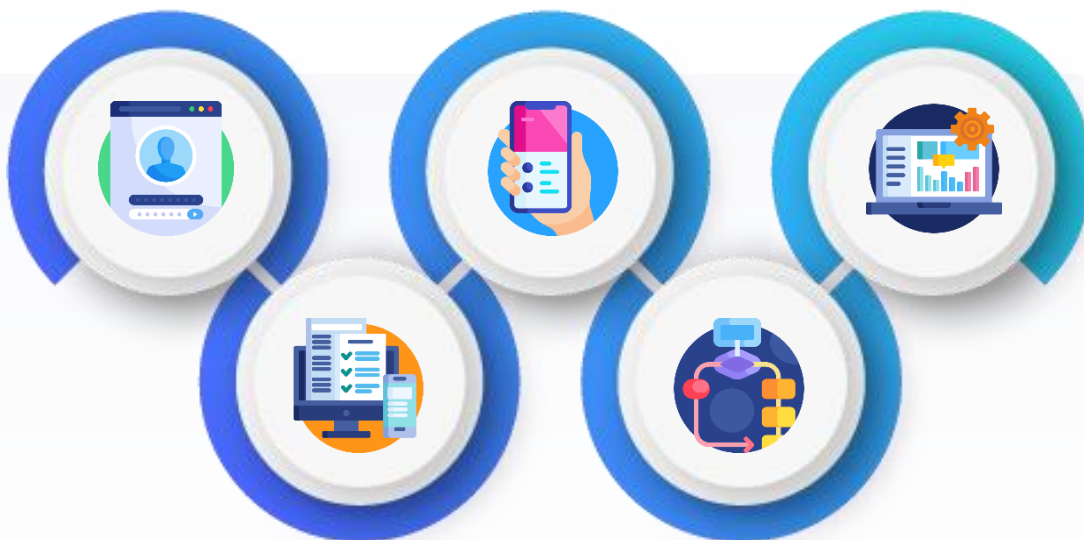

Every Feature of AI-Powered Chatbot Is Built With Customer in Mind

01 Persona-based access to enhance engagement
