

SOLIXCloud Database Archiving

Secure, pay-as-you-go archiving service to improve Application Performance, Reduce Costs and Stay Compliant

Data growth and challenges

Over time enterprise CRM, ERP and custom applications accumulate large amounts of data. It is observed that as much as 80% of this data is inactive or rarely accessed, yet it continues to stay in production databases clogging up expensive storage, backup and compute resources. Many enterprises do nothing about it due to the complexity involved in identifying the inactive data and the need to preserve it long term for compliance audits and other business uses. This continued presence of inactive data drives up infrastructure costs and time taken for backup and recovery while diminishing application performance and user productivity.

SOLIXCloud Enterprise Archiving

SOLIXCloud Enterprise Archiving provides an Information Lifecycle Management (ILM) solution framework to archive your enterprise data as-a-service. The solution suite consists of four applications including Email Archiving, File Archiving, Database Archiving and Application Retirement.

HIGHLIGHTS

- ➔ **Database Archiving as-a-service** is a fully managed and on-demand database archiving service.
- ➔ **Low cost, Pay-as-you-go** provides high ROI while providing the flexibility of aligning costs with consumption.
- ➔ **Secure, Scalable and Elastic** platform enables an on demand, compliant archiving service that meets the changing demands.
- ➔ **Improve the performance and availability** of applications by archiving inactive data from the production environment.
- ➔ **Maintains referential integrity** to ensure business transactions are relocated in their entirety.
- ➔ **Optimize TCO** by reducing infrastructure, database license and maintenance costs.
- ➔ **Improve compliance** through policy-based long-term data retention, legal holds, and discovery.
- ➔ **Retain seamless access** to archived data through SOLIXCloud.
- ➔ **Integrated set of tools** - patch synchronization, space reclamation, scheduler and unified control of all features and processes through a single console.

SOLIXCloud is designed to control costs, boost application performance and availability, and meet compliance objectives.

It helps optimize infrastructure, improve application performance, reduce software license and storage costs. It also helps improve regulatory compliance through e-discovery and policy-based long-term retention of data.

Features & Benefits

Smart archiving with secure access

Quickly identify inactive data from your production applications, and 'move' it to a secure cloud archive with data integrity and access preserved. Users can access this archived data using the forms, queries and custom reporting features provided by SOLIXCloud.

Policy-based data retention for compliance

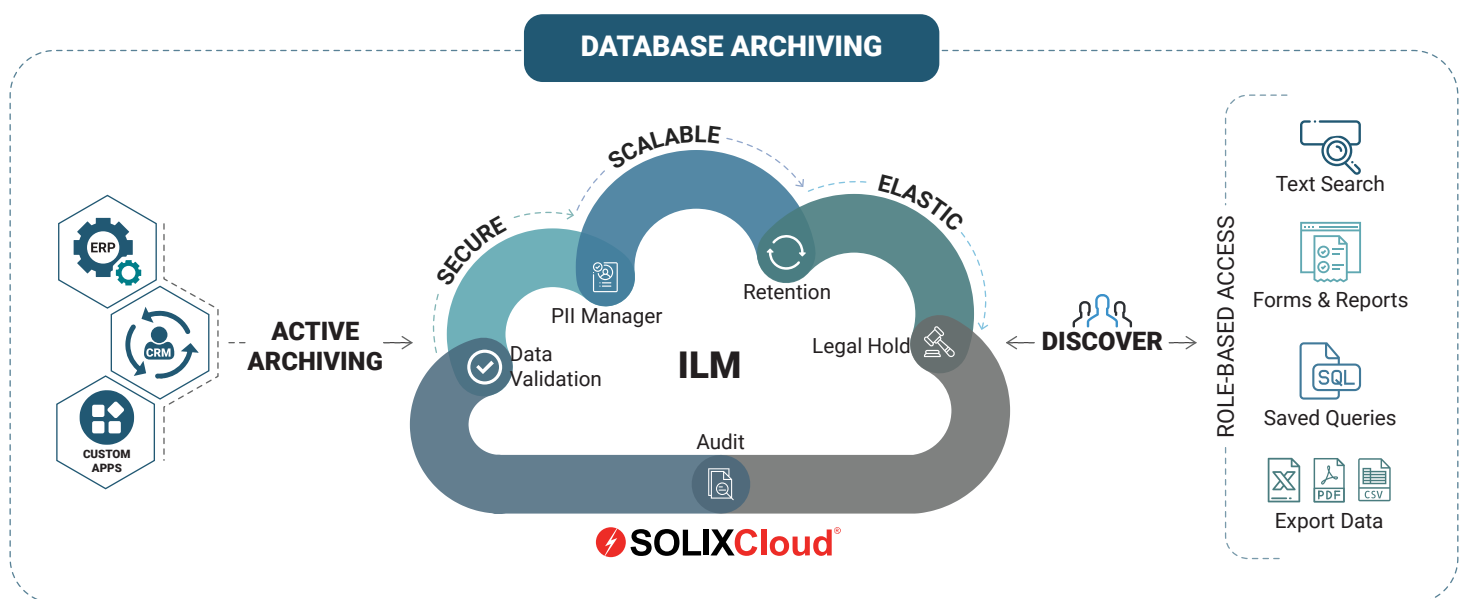

Retention management holds the archived data for a given period of time and purges the data automatically, or via manual intervention, when the data retention policy meets its criteria. The policy-based retention helps organizations comply with the complex regulations governing data retention.

E-Discovery & Legal hold

Compliance and legal professionals can quickly search, identify and retrieve records of interest to meet data requests from regulatory bodies and law enforcement. Further, one can place a legal hold on such records to safeguard them from accidental deletion or to retain them beyond the pre-defined data retention periods.

SOLIXCloud Database Archiving

SOLIXCloud helps you quickly identify infrequently accessed historical data from your production applications, and 'move' it to a secure archive on the cloud with data integrity and access preserved.

Administration with full audit trail

Provides comprehensive administrative capabilities including access management, status monitor, scheduler, data validations, retention policy management, data purge from source, patch synchronizer, full audit trail, and notifications.

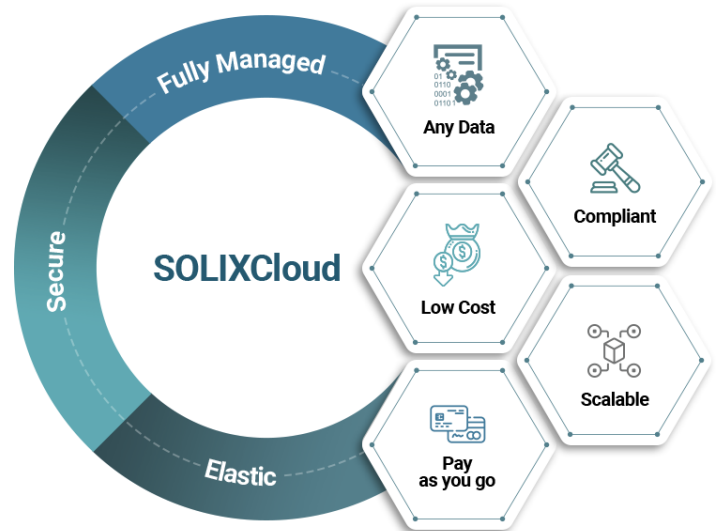

Support for multiple applications & databases

Includes pre-populated and customizable metadata knowledge bases for many popular ERP applications including OEBS, SAP, Peoplesoft, JD Edwards, Siebel, and Baan. SOLIXCloud also supports custom applications built on popular RDBMS such as Oracle SQL, MySQL, MS SQL, Sybase, and DB2. Other RDBMS with JDBC drivers are also supported.

			
Validated Integration	Validated Integration	Validated Integration	Validated Integration
Oracle E-Business Suite	PeopleSoft Enterprise	JD Edwards EnterpriseOne	Siebel Customer Relationship Management

Cloud Native Solution

SOLIXCloud offers application retirement as a fully managed, low cost, and pay-as-you-go service. It is secure and compliant with the ability to scale as per your needs.
