

Focus on data, make the change

**The first digital platform designed for digital
Public Administrations**

Digitalization enables a virtuous relationship between PAs and communities, but, to do so, it is necessary to make regulations anchored to informative and administrative data assets.

What is Civilia Next

Civilia Next is the first platform made for the digital PAs, suited for those who run local institutions of any kind and size; an integrated system featured with application modules which are capable of addressing specific operative needs of institutions.

Why Civilia Next

Cloud native. Cost efficient and quick to adopt, no investment needed.

Scalable. Designed for multiple institutions, evolving together with associative regulations.

Open and expandable. Ready for future extensions, able to operate with legacy systems.

The Management is easier

Having simplified operations means that citizens receive quicker and more precise responses.

The redesign of the process is enabled

Built on an information-based architecture, thanks to smart use of the informative layer of institutions.

Single Informative Hub

Collects and links all the data about people, objects and geography in order to guarantee reliable, complete and up-to-date data.

What convinced us is the great innovation introduced with this approach and the platform, together with the competence in staying beside us, with mutual intents. It's not only about the vision of changing the PAs, but it's also about the ability to make it happen. That is why we have chosen to cooperate with Dedagroup to succeed in this innovative change.

– Francesco Damiano, mayor of the municipality of Montesarchio and president of the "Città Caudina" union

The Benefits of Civilia Next

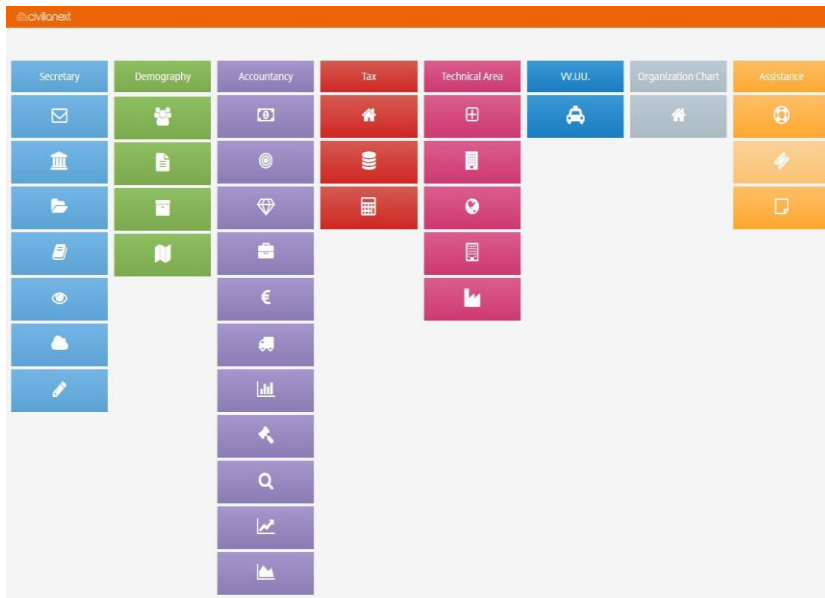

With Civilia Next

- Reduce the use of paper documents;
- Stay up to date about application capabilities;
- Embrace the power of a solid, simple and web-based tool;

Civilia Next and Microsoft Azure

- Based on open and flexible systems;
- Compliant and reliable in protecting your data;
- Cost efficient and scalable.

Find out how to be closer to citizens:

- **Rethink the organization** in a really quick and economic way, starting from the operations with which you deliver services.
- **Cut IT expenses** reducing fixed and maintenance costs.
- **Estimate tax incomes** to reduce Tax fraud and develop fair and sustainable fiscal regulations.
- **Cooperate with other institutions** by sharing data.
- **Adopt PagoPA** to provide better services to citizens and local business.
- **Join ANPR to preserve** the quality of your informative data assets.

Why Dedagroup Public Services

We push the progress towards the Data Driven Administration by creating new ways of digitally sharing data and systems, in order to make public services become the engine of the country's development. We enhance, thanks to technology, the communication between local and central PA.
