Optimize Microsoft SharePoint & OneDrive Performance

Modern businesses rely on enterprise content management (ECM) and content services platforms (CSP) like Microsoft SharePoint and OneDrive. However, these content management applications often do not reach full potential because they lack the ability to optimize performance. This directly impacts businesses with poor application performance, reduction in efficiency, increased costs, and increased security risks. Reveille remedies these issues by providing comprehensive management and optimization for content management applications.
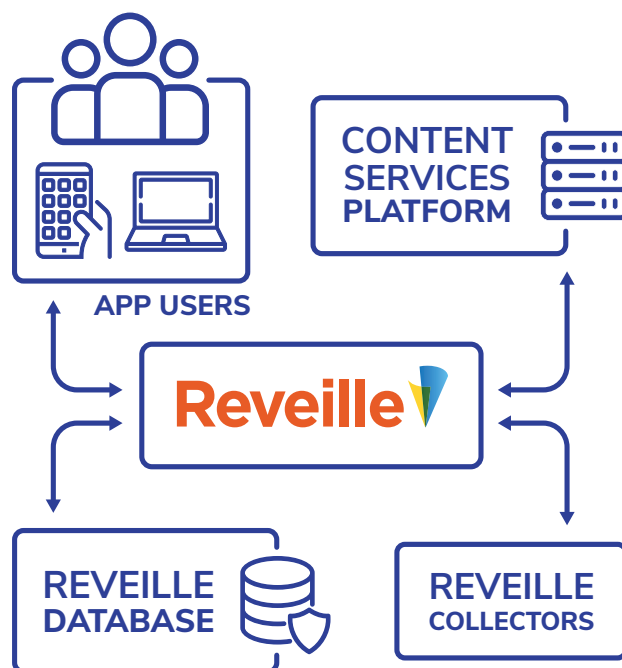

Monitor. Analyze. Optimize. Anytime. Anywhere.

Reveille solutions enable ECM Performance Optimization through intelligent insight and comprehensive management of underlying ECM assets – across all ECM solutions.

Reveille ensures the highest performance levels and observability, utilizing out-of-the-box tests, consoles, dashboards, reports, and integrations. Reveille easily integrates into Network Infrastructure monitoring, Cloud Platform monitoring, System Information and Event monitoring (SIEMs), IT Operations Management (ITOM), End Point Security solutions and reporting technologies via REST APIs.

With Reveille's quick to deploy solution, in a matter of days, not months, businesses benefit from:

- Ensuring application availability
- Attaining service level goals
- Meeting system performance targets
- Meeting user performance targets
- Protecting end user usage
- Easily integrating into existing ITOM and SIEM environment.

Reveille Delivers Unrivaled Business Impact

Reveille is the industry leader in ECM Performance Optimization for cloud and on-prem (off cloud) Content Systems monitoring, analytics, management, protection, and remediation.

With Reveille customers can expect lower TCO, higher service levels, and reduced risks.

Reveille is quick to deploy (wizards) and easy to maintain (agentless).

Reveille:

- Integrates with system incident management tools and other ECM applications
- Enables proactive ECM management vs. reactionary fire drills
- Reduces number of support tickets for Microsoft SharePoint and OneDrive
- Shortens TTR for remaining, legitimate application issues

You Have Questions, We Have Answers

Reveille helps keep business-critical ECM applications running and protected by revealing blind spots with answers to vital performance and security questions.

Reveille Provides the Performance Optimization You Need to Answer Questions Like:

- Are individual applications responsive or sluggish?
- Are connections compromised?
- Can the appropriate action be taken automatically?
- At what level of service are systems performing?
- Are documents being improperly accessed?
- What are users doing with business-critical content?
- Are irregular login patterns occurring for high-value assets?

> " Reveille's user analytics are icing on the cake. Being able to report actual numbers up to management — who, what, when, how, and tie in the security aspect — is very powerful.

With Reveille for Microsoft SharePoint and OneDrive

- Eliminate application 'babysitting' common tasks of observing, tracking, communicating for on-premises and cloud deployments.
- Gain operating visibility quickly with over 50 Microsoft-specific agentless tests and over 25 metrics.
- Reduce time for opening incidents with help desk after the fact so incidents are historically tracked.
- Leverage Azure cloud for Reveille notification, metrics integration, database, and log services.
- Capture the actual user activity data to assist with audit, compliance, capacity planning reviews and security user access protocols.
- Receive proactive alerts to degrading conditions when they happen, reducing surprise impacts causing bridge calls that extend manual recovery workflows.
- Gather baselines of application operating performance with our dashboard metrics available with Power BI trusted data connectors.
- Get SharePoint User Analytics to objectively understand user transaction volumes, search hit counts, 'hot' content, query activity, and response times.
- Collect operating and user analytic data without exposing M365 access credentials to Reveille Software or a separate 3rd party management service or entity.
