6. Steps to Migrate from Dropbox to OneDrive

In this section, we have laid out all the steps for migrating user accounts and files and folders from Dropbox to OneDrive using our [X-Change migration tool](#). Follow along for a clear understanding of the entire process.

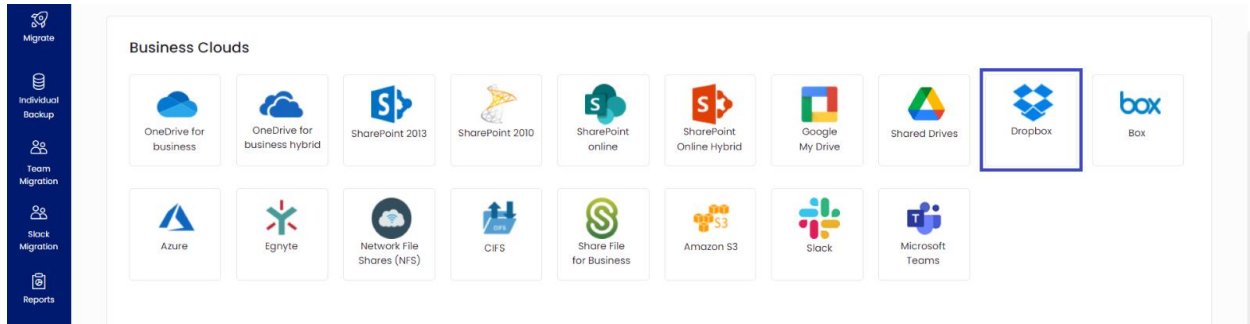

Step 1: Create a CloudFuze Account

To get started, log into our webapp to test migrate. You can create a new [CloudFuze account](#) here if you don't have one.

Step 2: Add the Dropbox Cloud to CloudFuze

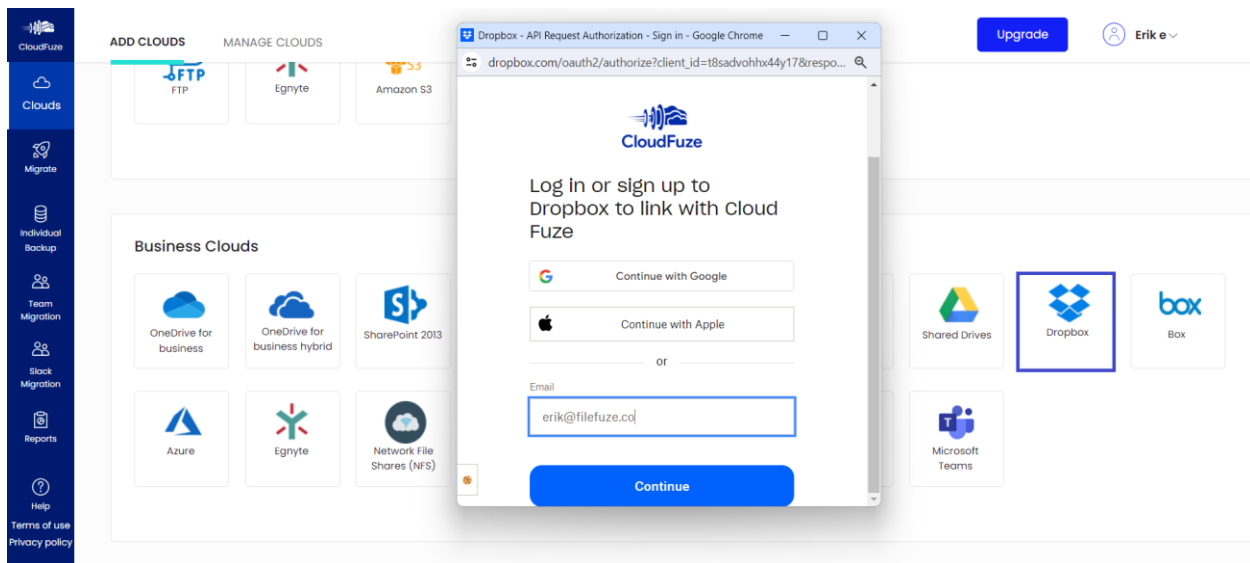

Next, in the “Business Clouds” section of the webapp’s dashboard, locate the Dropbox cloud and click on “Add Cloud.”

Step 3: Enter Dropbox Admin Credentials

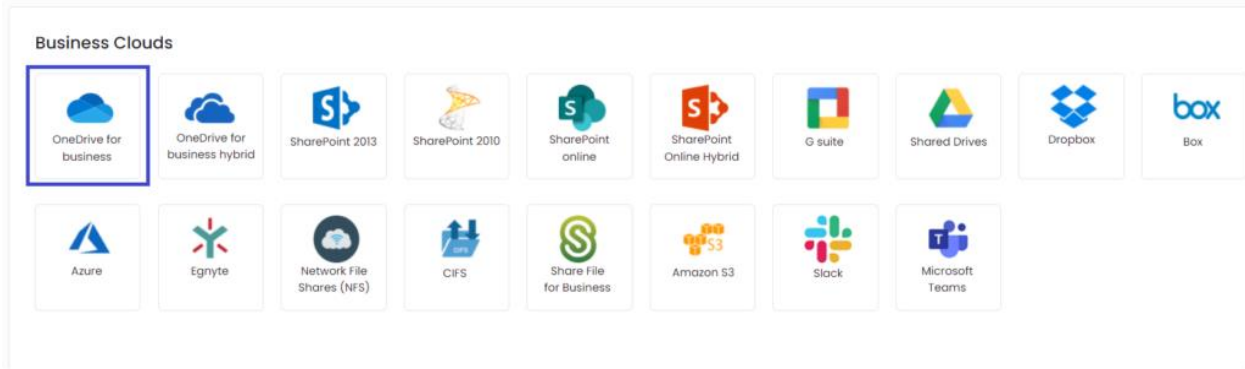

Enter the login credentials of the Dropbox’s admin account to add the cloud to our migration platform.

The entire cloud authentication process is carried out via the secure OAuth 2.0 protocol to ensure we do not store login information.

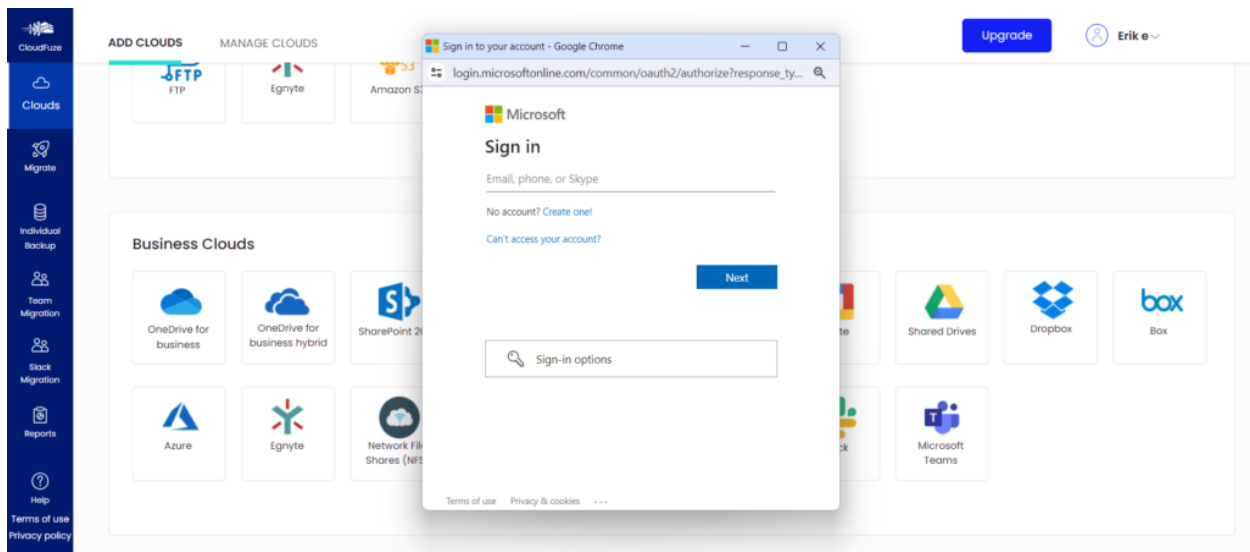

Step 4: Add the OneDrive Cloud to CloudFuze

Similarly, locate the OneDrive cloud on the “Business Clouds” section and click on “Add Cloud.”

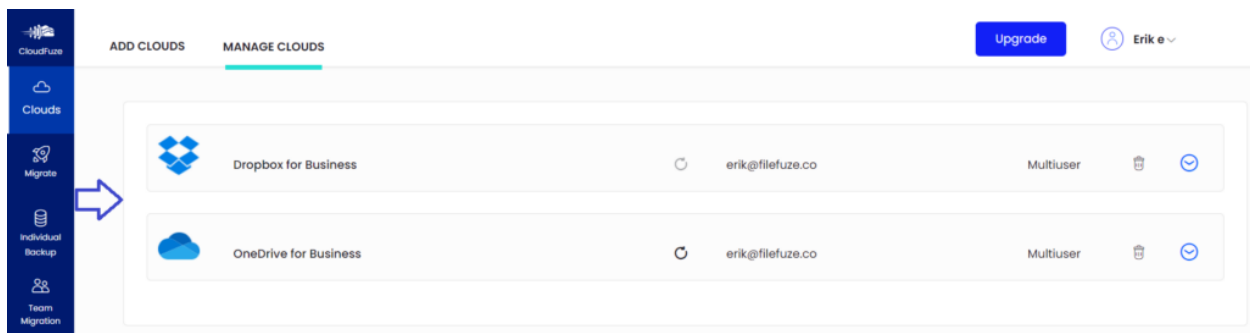

Step 5: Enter Microsoft 365 Global Admin Credentials

Add the Global Admin login credentials of your organization’s Microsoft 365 license.

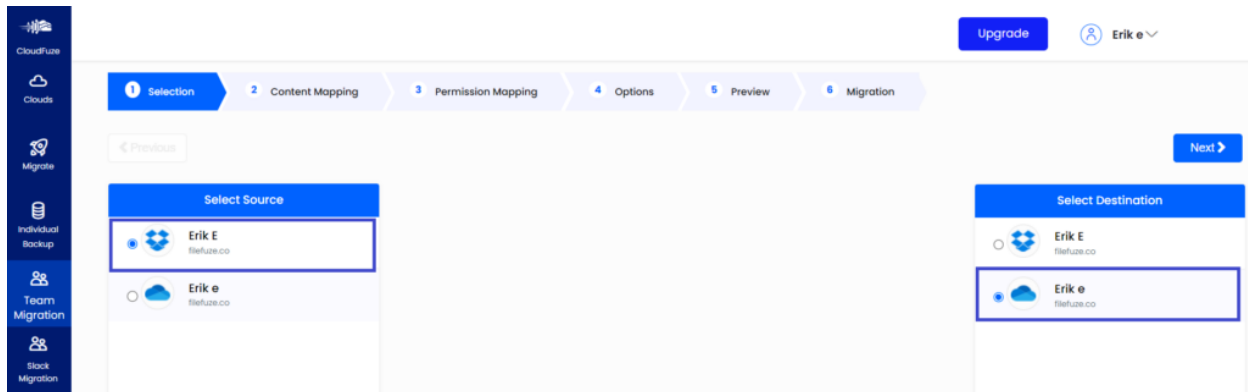

Step 6: Check and Ensure Both Clouds are Added

Visit the “Manage Clouds” section and check and ensure both clouds, Dropbox and OneDrive, are added properly. If one or both clouds are missing, restart the cloud adding process.

Step 7: Configure the Source and Destination Clouds

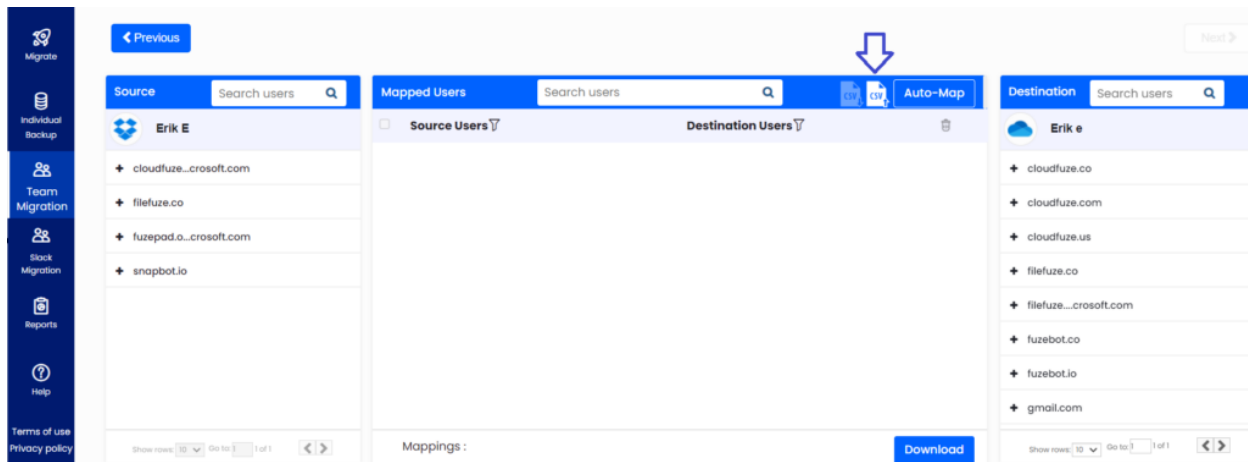

Navigate to the “Team Migration” panel and choose Dropbox as the source and OneDrive as the destination cloud.

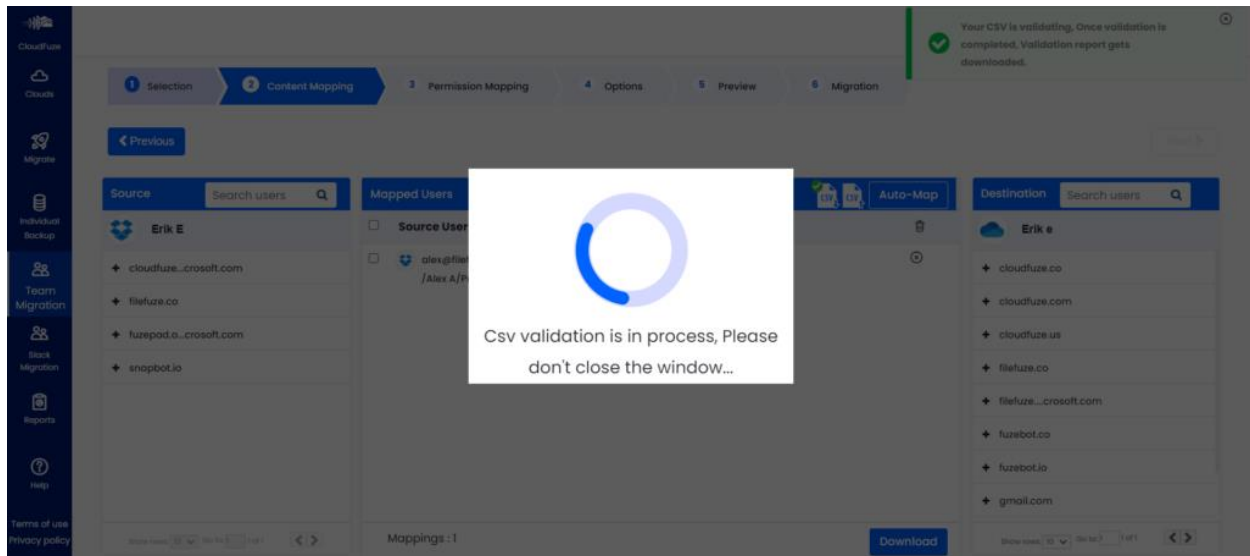

Step 8: Create the User Mapping

Next, map the user accounts from Dropbox to OneDrive. Our tool offers two types of mapping options: auto-mapping and CSV mapping. You can choose auto-mapping if you want to create straightforward user mapping without customizations.

However, for specific user mappings and customization options, CSV is the option we recommend. Create user mapping on a CSV file and upload it to our webapp by clicking on the CSV upload icon.

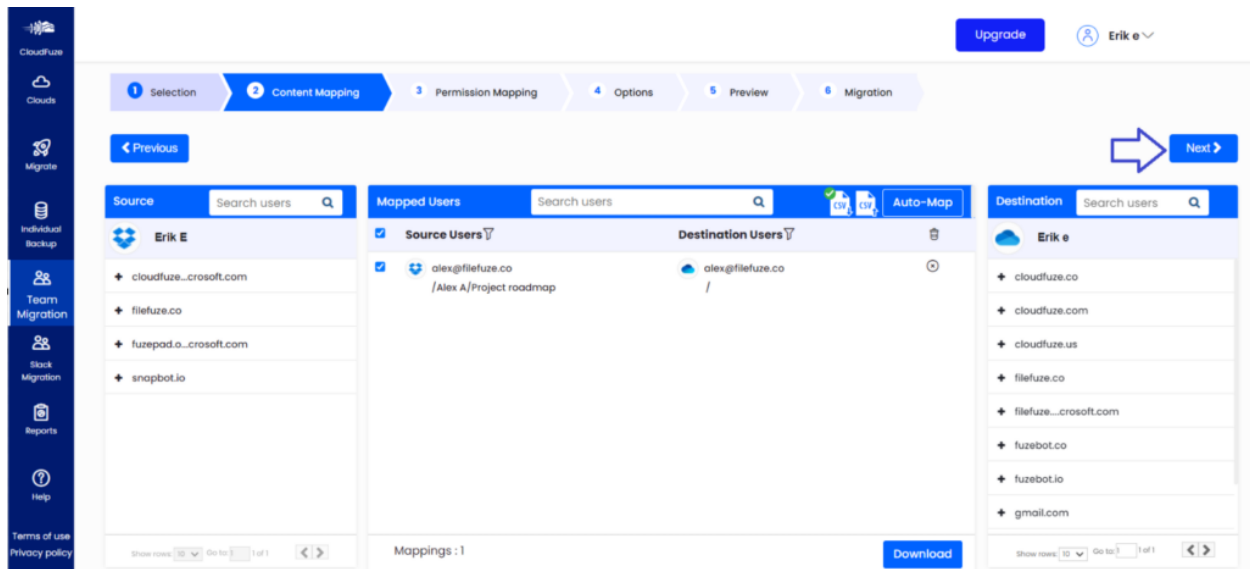

Our tool will automatically validate the CSV mapping and indicate if you have mapped properly by using correct syntaxes.

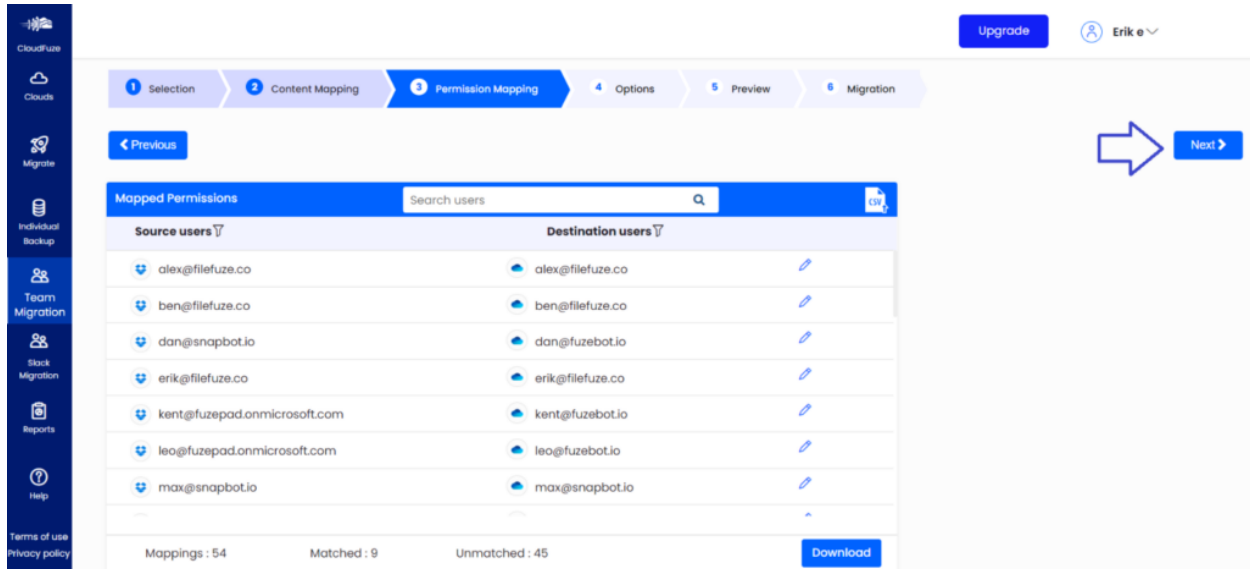

Step 9: Choose the User Mapping Pairs to Migrate

After mapping the user accounts, select the mapping pairs that you want to test migrate.

Step 10: Check Permissions Mapping

Our tool automatically maps permissions from the source to the target cloud accounts based on the email aliases. However, if you want to map the user permissions in a particular way, you can click on the edit icon of each pair and make changes accordingly.

The screenshot shows the 'Mapped Permissions' section of the CloudFuze interface. It features a navigation bar with steps 1 (Selection), 2 (Content Mapping), 3 (Permission Mapping), 4 (Options), 5 (Preview), and 6 (Migration). A sidebar on the left contains navigation options: CloudFuze, Clouds, Migrate, Individual Backup, Team Migration, Stack Migration, Reports, and Help. The main content area displays a table with columns for 'Source users' and 'Destination users'. The table lists the following mappings:

Source users	Destination users
alex@filefuze.co	alex@filefuze.co
ben@filefuze.co	ben@filefuze.co
dan@snapbot.io	dan@fuzebot.io
erik@filefuze.co	erik@filefuze.co
kent@fuzepad.onmicrosoft.com	kent@fuzebot.io
leo@fuzepad.onmicrosoft.com	leo@fuzebot.io
max@snapbot.io	max@snapbot.io

At the bottom of the table, it shows 'Mappings : 54', 'Matched : 9', and 'Unmatched : 45'. A 'Download' button is located at the bottom right of the table. A 'Next' button with a right-pointing arrow is also visible on the right side of the interface.

Step 11: Choose Permissions and Other Features to Migrate

In the “Migration Options” section, choose the types of features (associated with Dropbox users and their files/folders) you want to migrate to OneDrive. You can also configure other types of migration parameters, including migration job type, migration job name, file type exclusion, email notifications suppression, and notifications about migration progress.

The screenshot shows the 'Migration Options' section of the CloudFuze interface. It features a navigation bar with steps 1-6, a sidebar with navigation options, and a main content area with two panels: 'Migration Options' and 'Job Options'. The 'Migration Options' panel contains a list of features to be migrated, each with a checkbox:

- Select All
- Shared Links
- External Shares
- Version History
- Preserve Timestamp
- Sub-Folder Permissions
- Inner File Permissions
- Embedded Links

The 'Job Options' panel contains the following configuration fields:

- Job Type**: One Time
- Job Name**: Onetime-DBFB-ODFB-Mar.27.2024
- Exclude File types**: Enter file types separated by comma (e.g. mp3,mp4,psd)
- Suppress Email Notifications**: Internal Emails (toggle off), External Emails (toggle off)
- Additional Notifications**: Enter additional e-mail id's separated by enter

A 'Next' button with a right-pointing arrow is visible on the right side of the interface.

Step 12: Preview and Start the Migration

Preview all the parameters you have configured and click on “Start Migration” to initiate the process of moving files and folders from Drobox to OneDrive.

Job Options

- Job Name : Onetime-DBFB-ODFB-Mar-27-2024-12
- Job type : ONETIME
- From Cloud : Dropbox for Business
- To Cloud : OneDrive for Business

Migration Options

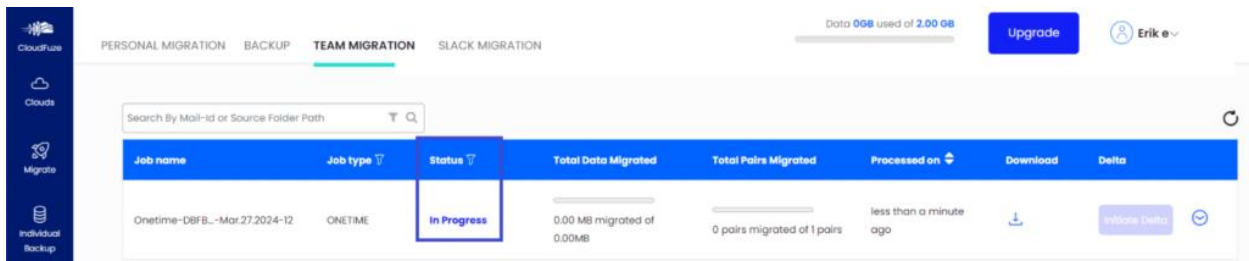

- Shared Links : No
- External Shares : No
- Version history : No Selective Versions --
- Preserve TimeStamp : No

Migration Pairs

Source users	Destination users	Provision Status
alex@filefuze.co	alex@filefuze.co	Provisioned

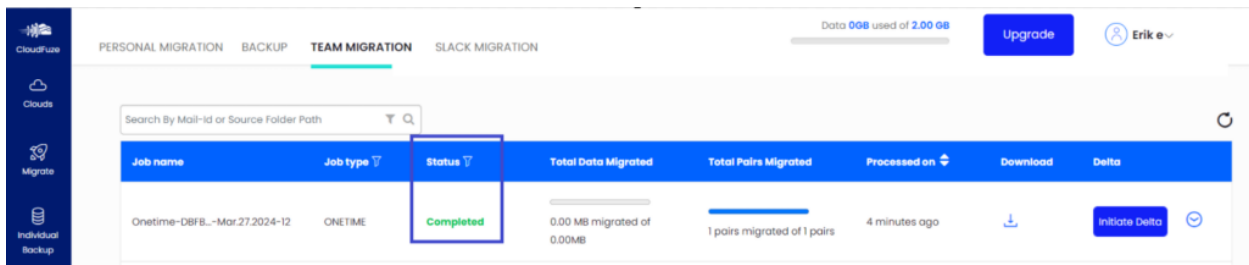

Step 13: Monitor the Migration

Our tool will automatically redirect you to the “Reports” panel upon starting the migration. Here, check the latest updates of the ongoing migration. The “In Progress” status indicates that the data transfer process is in progress.

Job name	Job type	Status	Total Data Migrated	Total Pairs Migrated	Processed on	Download	Delta
Onetime-DBFB...Mar-27-2024-12	ONETIME	In Progress	0.00 MB migrated of 0.00MB	0 pairs migrated of 1 pairs	less than a minute ago	Download	Initiate Delta

The status will display “Completed” after all the user accounts and their files and folders have been migrated from Dropbox to OneDrive.

Job name	Job type	Status	Total Data Migrated	Total Pairs Migrated	Processed on	Download	Delta
Onetime-DBFB...Mar-27-2024-12	ONETIME	Completed	0.00 MB migrated of 0.00MB	1 pairs migrated of 1 pairs	4 minutes ago	Download	Initiate Delta
