VERITONE IDENTIFY™

For Law Enforcement

Establish Suspect Leads in Minutes

- Compare suspects in video and photo evidence against arrest records systematically with face recognition.
- Review potential suspect matches by face recognition confidence score.
- Filter results by booking data such as gender, age, height, hair color, ethnicity, and more.

Aggregate Persons of Interest to Track Across Cases

- Detect unknown faces found in evidence but not present in booking records.
- Add individuals to a persons of interest database for comparison with video and photo evidence from other cases.

HARNESS THE POWER OF YOUR BOOKING DATABASE TO IDENTIFY SUSPECT LEADS FASTER WITH AI.
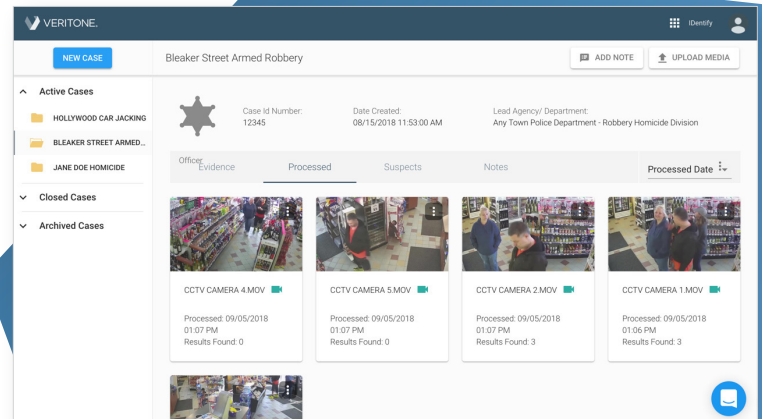

Increase Investigator Efficiency

- Share curated suspect leads for further investigation with colleagues via email.
- Consolidate suspect information in a centralized, web-based platform including appearance in evidence, booking photo(s) and data, last known address, and more.
- Organize evidence by case including case details such as ID, department, officer(s), description, location, time, and notes.

Maintain Officer Safety

- Run surveillance camera and mobile phone photos for known offender matches without tipping off suspects.
- Reduce need for cold car stops with automatic evidence and booking database comparison in minutes, keeping patrol officers safe.
