ENRON INVESTIGATION
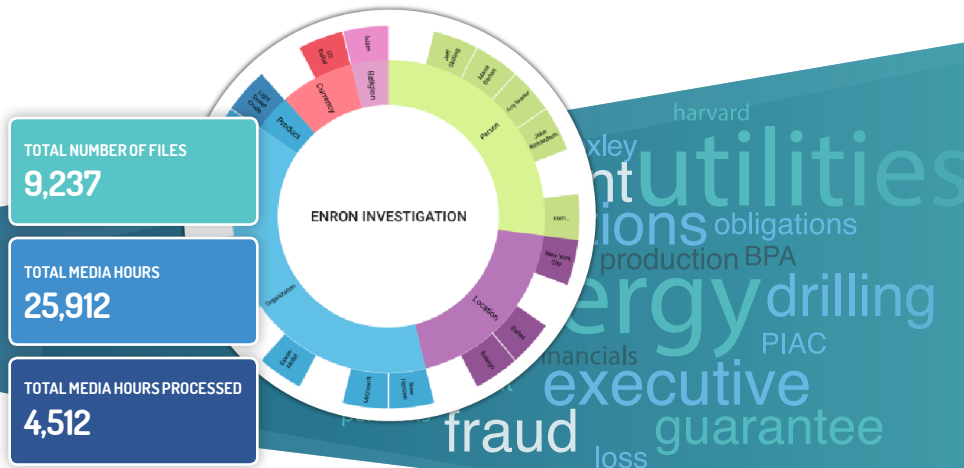

Veritone Illuminate enables law enforcement investigative teams to cost-effectively search, analyze, and explore large amounts of audio, video and text-based evidence.

Uncover Early Case Insights - Powered by AI

- Accelerate disclosure and other review efforts by automatically making unstructured data searchable by keyword, faces, objects and more
- Reveal front-end insights that might not have been uncovered in subsequent search efforts with cutting-edge conceptual and structured text analytics
- Meet information privacy requirements by obscuring sensitive information with Veritone Redact

Realize Significant Cost Savings

- Minimize storage costs by culling and analyzing large volumes of evidentiary media at scale
- Reduce translation costs by leveraging automated machine-based capabilities to easily translate data from one language to another

Agnostic, Extensible Platform

- One-click export of media assets and transcripts that can be imported into the review platform of your choice
- Flexible deployment and integration options to meet data protection and security requirements

Learn how Veritone is helping law enforcement teams cost effectively analyze and cull large volumes of unstructured evidentiary media before subsequent review.
